

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

AFRICA.

ALGERIA.

REPORT BY CONSUL GEELET, OF ALGIERS.

The number of persons in Algeria engaged in agriculture at the end of the year 1887 may be estimated at 3,246,300, of which number 206,960 are Europeans and 3,039,341 are natives. Comparing these figures with those of the year 1886 (187,033 Europeans and 3,098,220 natives), a considerable increase is noticeable.

The value of agricultural material has also increased. In the latter year 357,567 agricultural implements are reported, and their value fixed at 24,502,250 francs; while in the former the estimated value is 24,207,045 francs.

DOMESTIC ANIMALS.

The number of head of farm stock in the hands of the European and native growers reached in 1887 the figure of 17,973,431, divided as follows:

Sorts.	Belonging to—		Total.
	Europeans.	Natives.	
Horses.....	36,607	156,071	192,678
Mules.....	22,030	118,899	140,929
Asses.....	15,414	281,966	297,380
Camels.....	191	298,886	299,077
Oxen, cows, calves.....	138,536	1,071,623	1,210,159
Sheep.....	315,510	10,538,578	10,854,088
Goats.....	93,465	4,798,684	4,892,149
Hogs.....	86,901	100	87,001
	708,654	17,264,777	17,973,431

Comparing these figures with those of the preceding year (16,624,926 head) we notice a difference of nearly 1,500,000 in favor of 1887, and this difference is, for the most part, in the hands of the natives. The number of sheep, for example, owned by the natives is not much less than one and a half millions in advance of that of 1886.

AGRICULTURAL PRODUCTIONS.

The following table indicates the results of the season of 1886-'87:

Cereals.	Farming.				Total.	
	European.		Native.			
	Surface.	Crop.	Surface.	Crop.	Surface.	Crop.
	<i>Hectares.</i>	<i>100 Kilos.</i>	<i>Hectares.</i>	<i>100 Kilos.</i>	<i>Hectares.</i>	<i>100 Kilos.</i>
Wheat.....	232,729	1,480,111	1,002,829	4,293,921	1,234,558	5,774,032
Rye.....	408	3,951			408	3,951
Barley.....	98,945	1,006,011	1,200,312	7,223,932	1,299,257	8,229,943
Oats.....	48,202	550,543	2,324	16,491	50,526	573,034
Maize.....	3,794	31,664	9,106	81,653	12,900	63,317
Beechna (sort of sorghum).....	4,486	29,537	26,333	92,708	30,821	122,245
	338,564	3,107,820	2,240,906	11,658,705	2,629,470	14,766,525

Whereas in the preceding year the results were as follows:

Surface sowed.....	hectares.....	2,303,224
Quantity harvested.....	tons.....	1,662,494

The reason of this decrease may be attributed to the locust plague, especially in the department of Constantine.

VINE CULTURE.

The following table exhibits the extent and importance of vine culture in Algeria on the 31st of December, 1887:

Departments.	Europeans.		Natives.	
	Surface.	Wine crop.	Surface.	Wine crop.
	Hectares.	Hectoliters.	Hectares.	Hectoliters.
Algiers.....	30,119	944,538	1,947	723
Oran.....	32,816	711,064	1,077	158
Constantine.....	20,772	241,010	1,033	5,168
Total.....	83,737	1,896,612	4,057	6,849

At the same date of the preceding year the extent of surface planted was 70,041 hectares, and the production amounted to 1,666,000 hectoliters. By comparing the two results we see that about 8,000 hectares have been planted with vines during the year, and that the product in 1887 is nearly 300,000 hectoliters greater than that of 1886.

TOBACCO.

The number of planters, European and native, who have been engaged in tobacco-raising during the year, amounts to 8,942. The surface planted amounted to 10,239 hectares and the crop to 4,975,400 kilograms, as may be seen in the table.

Planters.	Number.	Surface.	Crop.
		Hectares.	Kilograms.
Europeans.....	1,411	2,484	2,411,979
Natives.....	7,531	7,755	2,563,421
Total.....	8,942	10,239	4,975,400

This result is sensibly inferior to that of the preceding year, which was as follows:

Planters, number.....	9,260
Surface cultivated, hectares.....	11,000
Crop, kilograms.....	5,632,000

OLIVE OIL.

One hundred and fifty-nine thousand six hundred and thirty-four hectoliters of olive oil have been made during the year 1887, viz, 12,697 by Europeans and 146,937 by the natives.

FLAX.

The surface sown in 1886-'87 was 1,751 hectares, and the amount raised 29,700 kilograms of the plant and 673,800 kilograms of the seed.

ALFA.

In 1887 the extent of surface from which alfa was gathered was 1,248,852 hectares, and the crop amounted to 224,000 tons. Of this 75,565 tons, worth about 8,915,000 francs, were exported to England. It may here be noted that Algeria is Great Britain's most important furnisher of this textile, as the amount she imports from all sources amounts to only about 200,000 tons.

The following table shows, by districts under both civil and military jurisdiction, the number of hectares from which this plant was gathered during the year 1887, the quantity gathered, etc.

Departments.	Districts.		Surfaces (hectares).					Total crop.
	Civil jurisdiction.	Military jurisdiction.	Forests.			Estates.		
			Muni- cipal.	Govern- ment.	Govern- ment other than forests.	Muni- cipal.	Pri- vate.	
Algiers.....	Algiers			9,526		42,600		100 ktlos. 4,100
		Boghar				340,000		12,000
		Djelfa				12,000		600
		Bou-Saada				7,600	8,750	17,700
	Oran.....	Elemeen	24,500	15,446		50,000	5,684	31,500
Oran	Bel Abbes		182,000			50,000	60,000	550,000
	Mascara		23,800			10,000		9,620
		Mecheria				26,000		40,000
		Saïda				180,000	2,000	120,000
		Marnia					2,000	925,000
Constantine		El Aricka		7,500		90,00		
	Batna		3,307	76,355		8,000		514,500
	Guelma					3,000	5,500	15,000
	Sétif		1,000	52,284	500			
Total			4,307	391,411	500	769,200	83,484	2,240,080

According to a decree dated January 22, 1886, a prize was offered for the best treatise on the working of the alfa fields. This prize amounted to 4,000 francs, the largest proportion of which has been attributed to Dr. Trabut, professor at the medical school at Algiers.

Appropriations to agricultural societies.—Appropriations amounting altogether to 19,250 francs have been accorded to twenty-eight different agricultural societies in order to encourage them and permit them to publish the reports of their labors.

Prize accorded to "communes" for encouraging the planting of trees.—As in preceding years, the government has accorded special appropriations to a certain number of municipalities for the purpose of encouraging the planting of trees upon the grounds thereto belonging. The amount of these subventions was during the year 9,200 francs. Plants and seeds of trees have been given to municipalities which have requested them.

AGRICULTURAL FAIRS.

Since 1879 yearly exhibitions of this nature have successively been held in the three provinces, that of 1887 being at Bouffarik. The experience thus obtained shows that the results are in general satisfactory. It has, however, been found that the majority of agriculturists have less interest in these exhibitions than if a greater lapse of time separated one from the other. The governor-general has, hence, requested that they be held less frequently and that the sums accorded for their encouragement be devoted, the years when no such exhibitions are held, to the payment of the expenses necessary to the participation of the colony in similar exhibitions held in France or in foreign countries. It is, hence, to be supposed that Algeria will be able to take a greater share in foreign exhibitions and increase her business relations with other countries.

LOCAL EXHIBITIONS.

Such exhibitions were organized in 1887 by agricultural societies in the three departments. During the year two were held in the departments of Algiers and Constantine, respectively, and seven in the department of Oran. The object was in some cases general, corresponding to the agricultural fair in the United States, and in some cases special, as, for example, seed or animal exhibits, plowing or vine-trimming matches, etc. For the support of these exhibitions the Government appropriated certain sums, varying in amount from 100 to 1,000 francs to each, in accordance with their respective importance.

PHYLLOXERA.

The methods of defending the vineyards against the phylloxeric pest and all the legislation on the subject has been already sent to the Department (dispatch dated March 18, 1887, No. 76).

During the year under consideration a general visit was made, under the direction of the department syndicates, to the vineyards in the provinces of Algiers and Oran, commencing about the middle of April and finished in August. The vineyards of the department of Constantine were examined by a committee appointed by the Préfet. Independently of this general visit of inspection, all the vineyards in which any withering of the plants has been reported have been particularly examined by the delegates of the department. They have also been charged with an examination of the American vines, in accordance with article 7 of the law of 1886, translation of which has been forwarded you (dispatch No. 76, above mentioned).

According to the provisions of the law, an indemnity amounting to 7,296 francs has been accorded to proprietors whose vines were, during the year, destroyed to prevent the spread of phylloxera.

SUBSIDIES TO HORSE-BREEDING SOCIETIES.

The sum appropriated to the different societies of Algeria during the year 1887 amounted to 39,800 francs. This has been employed in premiums offered at the different races of the societies.

The results of the operations at the different stations in the three departments were as follows:

Departments.	Stations.	Stallions.	Mares covered.
Algiers	47	200	5,897
Oran	31	197	7,611
Constantine	19	197	5,143
Total	97	594	18,651

SANITARY INSPECTION OF ANIMALS.

To prevent the attack and spread of contagious diseases in animals, the main features of the law of July 21, 1881, were by a decree dated November 12, 1887, made applicable to Algeria.

FOREST SUPERVISION.

This supervision is in Algeria extended over a surface of 2,785,186 hectares of forests belonging in part to the government and in part to municipalities. It extends also to woods and uncultivated lands of private owners which are situated in the mountainous districts.

The care of the forests is a work of the greatest importance, and imposes a particularly delicate task upon the local government. An intelligent intervention of the forest-service in the disposition of the woods belonging to private individuals, the regulation of pasturage, the reclamation of mountain lands carried on in virtue of the law of December 9, 1885, will allow the state at no very distant date to re-establish important masses of wood which are destined to exert a most beneficent effect upon the water and climate.

JAMES B. COFFIN,
Consul.

UNITED STATES CONSULATE,
St. Helena, June 30, 1889.

SIERRA LEONE.

REPORT BY CONSUL LEWIS.

Knowing that the Department is anxious this report should be sent in as early as possible in the new year, I have, as usual, made special effort to obtain final figures to complete the tabulated statements; for should I wait to receive them in the ordinary way, I could not make this report before March, as the Gazette for November will not be printed before the middle of January, and December about the middle of February, but through the kindness of the collector of customs and the colonial secretary I am permitted to copy the figures from the original manuscripts, etc.

AGRICULTURE.

This department, I am satisfied, never will attain to anything like the importance which it deserves. There are, no doubt, a great many reasons why it will not.

Ginger and ground-nuts seem to be the only two things which are now cultivated for export, and the very low price of these articles now and for the past few years does not offer sufficient stimulus to exertion.

A penny per pound for ginger does not much more than pay for the labor expended. Again, there are no draught animals employed and no plowing done; the soil is dug up with stout hoes and but poorly done. Everything seems to tend to discourage any young men from entering this field, consequently the towns are overrun with young men and boys seeking clerkships, servants' places, etc., and the supply greatly exceeds the demand.

A botanical garden, on which a good sum of money raised by subscription was spent, was opened here in 1887 with a great flourish and sounding of trumpets, afterwards to be entirely neglected and allowed to go to utter ruin.

These undertakings are usually started by enterprising and overzealous Europeans who are here this year and gone next, hence no one is left who cares to continue the good work begun.

With regard to the ground-nut industry which has been so dead for a few years past, in the northern and adjoining rivers I hear nothing of its reviving, but at Bathurst, River Gambia, 480 miles north, I am told they have quite encouraging prospects for this season's crop.

EDUCATION.

So far as I have been able to judge during the year 1888, there has been no improvement over past years, and, if anything, I think the tendency has been a little downward. European teachers get sick often and have to go away for their health, and the native teachers are too easily satisfied and content to let things jog along in the easiest manner with plenty of memorizing and singing of hymns, which suits the children and is easy for the teacher. The inspector of schools has made his round of examinations, and I have no doubt he has learned by experience that to make any great reform is anything but an easy task. All the schools of 1887 have been in regular session during 1888.

POPULATION AND SANITARY CONDITION.

We have had no census since 1881, and so we do not know anything regarding the increase or decrease of population, but I should judge there is no great change, excepting it may be many aborigines from the interior temporarily residing in town, called hither by the large amount of work being done by the Imperial Government.

Sanitary conditions seem to receive little or no attention, as there is no officer whose business it is to look after this department. The nominal sanitary inspector is kept in the interior most of the time, until he gets sick, and then has to be sent away to England to save his life. This has been the case regularly in 1887 and 1888, and now, December 31, he is still absent in England, having been sent away ill. The health of the place, however, during the past year has been as good as any average year, nothing out of the usual having transpired.

The rain-fall has been 144 inches, as compared with 154 inches last year.

During the latter part of the year Governor Sir Samuel Rowe left for England ill, and only reached Madeira, where he died September 28.

Capt. James Shaw Hay, formerly administrator at the Gambia, has now been appointed governor of Sierra Leone. Gambia no longer forms part of this colony, as it has recently been detached and is now independent of Sierra Leone, reporting directly to the home government.

GARRISON AND FORTIFICATION.

- The First West India Regiment, which has been here now for the last three years, was relieved in December of this year by the Second West India Regiment, which regiment will now remain here for the next three years.

As recorded in my last report, the Imperial Government is still working on the fortifications. No guns have yet been sent out. I am now informed that work has already been begun on new barracks for a regiment of white troops which it is said will be sent out to man the fortifications when fully completed and guns mounted.

TELEGRAPH, ETC.

The two companies reported in my last have during the year consolidated, at least in their working arrangements, as there is now at the close of the year but one office and one set of men; this, I believe, being found necessary to reduce expenses of operating. The African Direct is the one now here, and business goes on the same as usual; the rate per word to the United States being \$1.68.

GENERAL TRADE, ETC.

As recorded before, there seems to be nothing new or of an encouraging nature. There is general complaint of hard times and dull trade, owing principally to the unsettled condition of the interior and low price of African produce in the European market.

Results of the war remain. Less rice is planted. What little farming the natives did was destroyed, and they are slow to cultivate more, as that, too, might be despoiled.

The price of some produce seems to be improving, such as palm oil and palm kernels.

The credit system here has been and is a great drawback, as many adventurers embark in trade who have nothing to lose and everything to gain. All kinds of business is largely overdone.

There are now five houses doing American trade where there were only two in 1878. There does not, nevertheless, seem to be any chance for profit, and there is no gain or increase in the sum total of American trade.

To sum up, this has been rather a quiet and uneventful year. The European merchants seem to be somewhat discouraged, for this place has so bad a reputation for health that unless business is good and a chance to make money it hardly pays Europeans to live here.

There are very few improvements made by the colonial government on account, it is said, of "no funds." The "chest" is always reported empty, although, as will be seen by the inclosed table, the customs revenue alone amounts to £51,229.

We are always looking for better trade and brighter prospects, which we hope to be able to note in another twelve months.

JUDSON A. LEWIS,
Consul.

NOTE.—No report for December in Second Eastern district.

NORTH AMERICA.

DOMINION OF CANADA.

PROVINCE OF ONTARIO.

FORT ERIE.

REPORT BY CONSUL WHELAN.

As has been stated in former reports, the attention of the people of this consular district is mainly directed to agriculture and the raising of live-stock; and the manufacturing interests are but of little consequence.

The early spring of 1888 was dry, cold, and frosty, and vegetation was backward, the season being two or three weeks later than that of 1887. The more advanced spring and early summer were very dry, and the rain-fall was much less than the average for the six preceding years. On the whole, the outlook for the grain and hay crops was unfavorable, and not very promising for cattle and their produce.

AREA.

The total assessed rural area of the Province of Ontario for 1888 was something over 22,000,000 acres. The total area in crops was 8,000,000 acres, besides 2,535,600 acres of cleared land used as pasturage. The wheat and hay crops seem to have suffered most from the early drought and unpropitious weather of April, May, and June.

CROPS.

Though wheat falls far short of the average crop in quantity, still the ripening and harvesting season was so favorable that the quality is good, being plump and hard and up to the standard weight. Hay was not much more than half an average crop, and the scarcity is greatly felt throughout the country. Barley was a fairly good crop both as to quantity and quality, and although rain set in before the crop could be housed or protected, causing more or less discoloration, yet one-half of the barley is of bright and excellent sample.

The following comparative tables show the acreage of the principal crops, the total yield, and the yield per acre for the years 1888 and 1887, and the average for six and seven years.

Crops.	Area.	Quantity.	Average per acre.	Crops.	Area.	Quantity.	Average per acre.

LIVE-STOCK.

Owing to the failure of the hay crop and the scarcity of fodder in general, farmers have parted with much of their stock, and prices are down.

The number of horses in the province is 596,218, some 21,000 more than in 1887.

Milch cows have increased by 33,238, although the number of all kinds of cattle is 20,000 less than in 1887.

WOOL CLIP.

The total wool clip for 1888 was 4,691,027 pounds, some 40,000 pounds more than in 1887, notwithstanding the fact that sheep had decreased 50,000 in number.

THE WELLAND CANAL.

The aqueduct and the enlargement and improvements on the Welland Canal are now fully complete, and along the whole length of the main line, from Port Colborne to Port Dalhousie, a depth of 14 feet of water is afforded. Between Port Dalhousie and Allanburgh, a distance of 11½ miles, there are now two distinct lines of canal, the old line and the new or enlarged line. From Allanburgh to Port Colborne, 15 miles, there is but one channel, the old canal enlarged and improved. On the enlarged canal there are twenty-six locks, 45 by 270 feet each. The Welland has one entrance from Lake Ontario, at Port Dalhousie, serving for both new and old canals, and two from Lake Erie, one for the main line at Port Colborne, and one at Port Maitland, 18 miles farther up the lake, for the feeder. The feeder is 21 miles in length, has two locks, and a depth of 9 feet of water.

FREIGHT TRANSPORTED.

Appended is a statement of each article of freight transported on the Welland Canal during the fiscal year ended June 30, 1888, verified by the Hon. Edward Miall, commissioner of inland revenue, and showing the quantities in separate columns, going up (west) and down (east), together with the nationality of the ports of departure and of destination, and the total freight, up and down, from what ports to what ports. Also the number, nationality, and description of vessels, whether Canadian or United States, steam or sail, and the amount of freight carried by each nationality and class.

Number, tonnage, nationality, and description of vessels passed eastward through the Welland Canal, and quantity of freight, in tons, thereby transported during the season of 1888.

IMPORTS AND EXPORTS.

The imports from the United States to this port for the year 1888 fell some \$30,000 short of those of the previous year. The falling away seems to have been chiefly in fresh oysters, of which \$26,000 worth more was sent here in 1887 than in 1888. The value of imported free goods was \$25,000 more than in 1887, the increase being mainly in anthracite coal.

ADDITIONS TO THE FREE LIST.

From the 4th of April last the following articles have been on the free list:

Fruit, green, viz: Apples, bananas, cherries, olives, peaches, pine-apples, plums, quinces, apricots, mangoes, plantains, pomegranates, blackberries, cranberries, gooseberries, raspberries, and strawberries. Trees, shrubs, and plants, viz: Apple, cherry, peach, pear, plum, quince, and all other fruit trees and stock of same; also blackberry, current, gooseberry, raspberry, and rose bushes; grape and strawberry vines; shade, lawn, and ornamental trees, shrubs, and plants. Seeds, viz: Canary, clover, and grass, chia, cotton, flower, jute, sesame, sugar-beet, sugar-cane, and seeds of fruit and forest trees.

VALUE OF IMPORTS.

The total value of imports from the United States for the year ended December 31, 1888, was \$813,510, of which \$60,674 worth were free goods, as follows:

Coal, anthracite	\$35, 722
Settlers' effects	22, 499
Trees and green fruit	1, 214
Steel rails	1, 079
Miscellaneous	160
Total	60, 674

The principal dutiable goods were:

Coal, bituminous	\$649, 207
Oysters	25, 647
Oil	23, 075
Barrels and manufactures of wood	11, 656
Manufactures of iron and steel	11, 020
Drugs and chemicals	6, 972
Glass and manufactures of	3, 268

JAMES U. CHILDS, Consul.

UNITED STATES CONSULATE,
Guelph, June 30, 1888.

MORRISBURG.

REPORT BY COMMERCIAL AGENT LEISHMAN.

AGRICULTURAL.

Hay, barley, oats, and wheat are the principal products of the soil in this consular district. The past season has been favorable, and crops of all kinds have been abundant. Hay and early grain were harvested without injury, but late grain was considerably damaged by continual wet weather. Hay being a light crop and the price high in some sections of the Dominion, very little if any of the surplus here will be exported to the United States, but will be shipped to other points in Canada.

INDUSTRIES.

The corporation of the village of Morrisburg has granted a bonus of \$25,000 to a company, for the construction of a paper mill to be erected on the bank of the Williamsburg Canal opposite Morrisburg. The company is to be known as the St. Lawrence Paper Company, and will manufacture all grades of writing-papers. Its capacity is to equal the Toronto Paper Manufacturing Company, of Cornwall, Ontario, which averages four and one-half tons daily. If right of water-power is granted by the Canadian government the work of construction is to commence the 1st day of June of this year, and be completed in one year from that time. This village is furnished with Hawley's system of water-works and an electric fire-alarm, both of which have been completed recently.

RAILROADS.

The Grand Trunk Company has commenced laying through this district a new track for the purpose of making the Grand Trunk a double-track railroad. Notice has been given that an application will be made at the next session of the Canadian Parliament for a charter to incorporate the Ottawa, Morrisburg and New York Railroad and Bridge Company. This line is intended to run in a southerly direction from Ottawa to New York City, bridging the St. Lawrence River from Morrisburg to a point in the State of New York near Waddington. Application was made for the same charter at the last session of Parliament but after passing the House of Commons was defeated by the Senate.

CANALS.

The construction of the new lock at the head of Williamsburg Canal is now practically completed. The dimensions of this lock are 270 feet between gates, 45 feet wide at the bottom and 46½ feet on top. There will be a depth of 14 feet on sill at the lowest known water and ordinarily 16 to 18 feet. The break in the Cornwall Canal is now very substantially repaired.

EMIGRATION.

One hundred and twenty-nine persons, many of whom had families, emigrated from this consular district to the United States during the past year.

SELLAR LEISHMAN, *Commercial Agent.*

UNITED STATES COMMERCIAL AGENCY,

Morrisburg, Ontario, January 29, 1899.

Declared exports from the Morrisburg consular district to the United States for the year 1888.

ALEX. PRIDHAM, *Consular Agent.*

UNITED STATES CONSULAR AGENCY,
Grenville, January 2, 1889.

PORT STANLEY AND ST. THOMAS.

REPORT BY CONSUL QUIGGLE.

The past year in this consular district offered but few new features to note in commercial matters over the preceding one. The general business outlook, however, appeared to show some little improvement over 1887, owing to the crops being better, and the prices of some kinds of agricultural produce higher, notably wheat.

BUSINESS DEPRESSION.

The amount of freight handled by the railroads centering here showed a marked increase, while some merchants claim that their sales have been larger and collections easier. But, notwithstanding all this, it is quite evident that the business depression of the last few years still continues in almost all branches of trade, and that the tendency in the values of farm and city properties is downward, if anything.

EXPORTS.

The exports from this district to the United States for the calendar year ending December 31, 1888 (exclusive of the agency at Courtwright), aggregated \$626,136.79, as per the following exhibit, a decrease, as compared with 1887, of \$24,779.44:

Articles.	Value.	Articles.	Value.
Apples, green and dried.....	\$33,668.06	Personal effects of emigrants.....	\$37,471.40
Barley.....	34,218.35	Poultry.....	3,885.94
Beans and pease.....	27,432.85	Potatoes and turnips.....	3,058.50
Breeding animals.....	15,254.00	Scrap iron, steel, and brass.....	5,478.83
Cattle.....	33,296.22	Sheep and lambs.....	80,024.50
Eggs.....	14,966.59	Staves, heading, hoops, bolts, and shooks.....	192,981.18
Flax and tow.....	10,327.00	Wood.....	15,193.25
Hides.....	32,320.75	Miscellaneous.....	3,169.27
Horses.....	39,625.00		
Lumber.....	30,693.84	Total.....	626,136.79
Oil (petroleum) and products.....	13,113.24		

The leading items of decrease were apples, barley, cattle, eggs, horses, scrap-iron, steel and brass, telegraph poles and piling, wheat and wool; but there was a gain in breeding animals, beans and pease, hides, lumber, oil, staves, heading, hoops, etc., firewood, and sheep and lambs.

Staves, hoops, heading, shooks, and bolts, formed nearly one-third of the total of exports, almost all of which was produced or came from points along the line of the St. Clair branch of the Michigan Central Railroad, which runs from St. Thomas to Courtwright (or as it is usually spelled, Courtright) 66 miles distant. This section of Ontario has still large tracts of land covered with fine timber suitable for cooperage material, and it is not likely the industry will decline to any great extent for some years to come.

The kinds of timber mostly used for this purpose are elm, ash, oak, and basswood.

The aggregate of exports of this commodity to the United States for each of the five fiscal years ending with June 30, 1888, was as follows: \$210,341.29, \$237,821.37, \$193,365.65, \$157,560.09, and \$204,897.06, an average of about \$200,000 per year. The past winter, owing to its exceptional mildness, was, up to the latter part of January, unfavorable for the stocking of stave and other mills, but at that time cold weather with good sledding set in and continued about six weeks. The lumbermen took advantage of it, put on large forces of men and teams, and the stave mills are as well or better stocked with logs than they were the winter before, and a large export of cooperage stock may be looked for in the near future.

It will be observed that not a bushel of wheat was exported to the United States from this district in 1888, although this section of Ontario is noted for its fine wheat crops.

Some years ago the export of this cereal was considerable, but the amount has dwindled until it has ceased altogether. This is in a large measure due to the establishment of roller-process flouring-mills which now consume nearly all of the home product.

The exports from the Courtwright agency, within the jurisdiction of this consulate, for 1888, are given in the following statement:

Articles.	Value.	Articles.	Value.
Emigrants' effects.....	\$5,307.00	Milk.....	\$378.68
Fish, fresh.....	253.46	Timber and other forest products...	11,311.10
Grain.....	14,699.28	Miscellaneous.....	123.00
Hides.....	131.71		
Live-stock.....	9,870.20	Total	42,679.48

SHIPPING.

The movement of shipping (all British) at the several ports on Lake Erie, within my jurisdiction, during the fiscal year ending June 30, 1888 (the latest statistics available), is given in the following exhibit. There is no record of the arrival or departure of any vessel flying the United States flag:

Kind.	Arrived.			Departed.		
	No.	Tons.	Crew.	No.	Tons.	Crew.
Steam.....	84	685	216	84	589	214
Sail.....	19	856	66	19	943	79

IMPORTS.

The imports from the United States into the customs district of the port of St. Thomas (which however is not co-extensive or as large as the consular district) are given in the annexed exhibit. They show an increase of \$48,404 over the preceding one:

For the quarter ending—	
March 31, 1888.....	\$84,772
June 30, 1888.....	91,993
September 30, 1888.....	93,556
December 31, 1888.....	71,925
Total.....	342,246

RECAPITULATION.

Goods exported to the United States for the year 1888.....	\$626,136.79
Goods imported from the United States for the year 1888.....	342,246.00
Excess of exports	283,890.79

The amount of imports other than from the United States, and nearly all of which were from Great Britain, was but \$66,659, showing total imports from all countries to have been \$408,905. The duties collected reached \$74,695.34.

EMIGRATION.

The number of emigrants who departed from this district for the United States (exclusive of those from Courtwright) during 1888, as shown by the records of the office, was 515, a gain of 95 over the year 1887. A large proportion of these settled in the State of Michigan.

JAMES C. QUIGGLE, *Consul*.

CONSULATE OF THE UNITED STATES,
Port Stanley and St. Thomas, March 20, 1889.

PROVINCE OF MANITOBA.

REPORT BY CONSUL TAYLOR, OF WINNIPEG.

IMPORTS.

The foreign importations at the port of Winnipeg have been as follows for the last three years:

Years.	Dutiable.	Free.	Total.
1886.....	\$1,460,789	\$333,584	\$1,794,373
1887.....	1,632,796	304,076	1,936,872
1888.....	1,425,475	254,019	1,679,494

In the year ending June 30, 1883, at the height of the construction of the Canadian Pacific Railway, the importation at the port of Winnipeg was \$6,373,599. I anticipate a gradual advance from the present depression, especially as there are indications of a material increase in immigration.

The importations at the different ports of the Winnipeg consular district for the year ending June 30, 1888, were distributed as follows:

Ports.	Dutiable.	Free.	Total.
Winnipeg.....	\$1,425,475	\$254,019	\$1,679,494
Emerson.....	49,036	22,518	71,554

The dutiable goods imported at Winnipeg from other countries than the United States and Great Britain were as follows: \$9,410 window glass was from Belgium, \$1,973 woolen goods from Germany, and the bulk of the remaining \$33,164 consisted of spirits and wines from France, Holland, Spain, Portugal, and Germany.

Of the item of provisions from the United States \$101,132 of a total importation of \$152,181 was bacon and ham.

The dutiable importation at Port Arthur was \$280,372, of which \$273,945 was from the United States, including bituminous coal, \$187,182; ore, \$32,481; iron machinery, \$13,270; meats, \$4,599, and lumber, \$600.

Dutiable importations, mostly animals and emigrants' effects, were \$49,036 at Emerson, and \$40,002 at Forts McLeod and Walsh, in the Northwest Territory, between Manitoba and British Columbia.

CUSTOMS REVENUE.

The Canadian revenue has not materially increased, having been \$680,151 in 1885, \$528,118 in 1886, \$735,148 in 1887, and \$555,137 in 1888 at the above ports of entry in the Winnipeg consular district, the incidence of taxation not exceeding an average of 30 per cent. ad valorem.

FREE IMPORTATIONS.

Of free importations at Winnipeg the leading items from the United States were: Logs, \$34,327; emigrants' effects, \$31,054; horses, \$14,825; green fruit, \$3,755; eggs, \$1,764; trees and shrubs, \$1,241; broom corn, \$1,168. From Great Britain, tea, \$40,662; emigrants' effects, \$19,152; nets and seines, \$6,534. From China, tea, \$21,092. From Japan, tea, \$26,454. At Port Arthur \$121,371 was anthracite coal from the United States. The free importations at Emerson were mostly animals and emigrants' effects.

EXPORTS.

The total foreign exportation from the port of Winnipeg for the year was \$1,239,639, of which \$403,427 was to the United States, \$835,944 to Great Britain, and \$268 to other countries.

The leading items to the United States were fresh fish, \$84,703; salted fish, \$10,530; furs, undressed, \$82,385; manufactured articles, mostly emigrants' effects, \$60,818; wheat, \$80,508; potatoes, \$42,326; hides, \$10,654; horses, \$7,778; barley, \$9,193; seneca root, \$3,837.

Of the exportation to Great Britain \$826,794, of a total of \$835,944, were undressed furs.

From the consular agencies of the Winnipeg district, except \$7,200 silver ore to Great Britain from Port Arthur, the exports have been altogether to the United States, amounting at Port Arthur to \$950,983, consisting of wheat, \$564,131 (shipped mostly in bond to Canada and England); silver ore, \$288,605; iron ore, \$32,515; fish, fresh and preserved, \$32,107; emigrants' effects, \$15,600; barley, \$10,607; brown sandstone, \$6,196; and miscellaneous, \$1,220. At the Emerson agency the exports were, \$55,085, entirely to

the United States, and consisting of potatoes, \$23,836; horses, free, for breeding purposes, \$12,398; hides and sheep pelts, \$4,068; silver ore, \$3,929; horses, dutiable, \$2,437; snake or seneca root, \$2,437; barley, \$688; emigrants' effects, \$522; undressed furs, \$230; miscellaneous, \$5,213. At the Wakopa agency, now at Killarney, the exports amounting to \$11,495, and consisting of animals and emigrants' effects, were entirely to the United States.

CANADIAN DOMESTIC TRADE.

The importation from Eastern Canada I continue to assume, in the absence of official returns,* to be double the foreign importations, and as the latter, including dutiable and free goods, were \$2,224,324, the quantity entered from Eastern Canada may be stated at \$4,448,648. As the cereal crops of 1888 were greatly reduced by the concurrence of rust and frost, which proved so disastrous in the hard spring-wheat districts of Minnesota, Dakota, and Manitoba, the exportation of 1888 from Manitoba to Eastern Canada was reduced more than one-half, and did not exceed 4,500,000 bushels of wheat and flour expressed in bushels, but amounting, at an increased average price of 80 cents per bushel, to \$3,600,000. Shipments of barley, oats, fish, furs, ores, and other articles have increased this amount to \$4,000,000. The trade with British Columbia has not materially increased since my last report, when imports of fish and lumber and exports of flour and provisions were estimated at \$300,000.

Aggregate trade by countries.

Countries.	Imports.	Exports.	Total.

MANITOBA FISHERIES.

The exportation of fish from the interior lakes of Central British America to the United States reached an aggregate during the calendar year 1888 of 2,586,076 pounds, valued at \$111,282, of which 621,151 pounds, valued at \$24,924.36, was reported to the consular agency at Port Arthur. The shipment through the Winnipeg consulate was 1,964,925 pounds, valued at \$86,658.24, and was distributed as follows:

	Pounds.
Detroit.....	627,704
Buffalo.....	408,023
Chicago.....	446,503
St. Paul.....	245,563
Minneapolis.....	153,994
Omaha.....	59,108
Kansas City.....	24,000
Total.....	1,964,925

* In 1862, under a resolution of inquiry from the United States Senate, Secretary Chase, of the Treasury Department, organized a commission to determine the ratio of domestic trade between the Atlantic and Western States and foreign importations, and of these westward movements the domestic was ascertained to be threefold the bulk of the foreign. As between Eastern and Central Canada, the domestic importation is here assumed to be double the foreign.

Fish frozen naturally and shipped in bulk during winter is free of duty by the United States tariff, being considered "fresh fish for immediate consumption," but preserved fish, being salted or packed in boxes with alternate layers of ice, is subject to a duty of 50 cents per 100 pounds.

Of this exportation the whitefish, *Coregonus albus*, or Allihawmeg in Cree Indian parlance was the leading article, the favorite of twenty different varieties of *Salmonidæ*, including half a dozen trouts, which abound in the Manitoba and Keewaten waters. Next in value is a variety of the perch family, erroneously called the wall-eyed pike in Minnesota and Wisconsin, but which is known in Canada as pickerel or doree, being styled *Stizostethium vitreum* by naturalists. Third in the list of exports is the jack-fish or pike proper, *Esox lucius* of the family of *Escoidæ*. So far these constitute the bulk of the exportation, with small consignments of "yellow pike," which is probably a yellow marked pickerel or doree, tolibeas or herring, sturgeon, perch, and catfish. At Port Arthur 800 pounds of caviare, manufactured from the roe of the sturgeon, was shipped to the United States last season. The water surfaces within this consular district available for this industry and closely connected with southern markets by railway are an area of 30,000 square miles.

RAILWAY SITUATION.

The controversy between the authorities and people of Manitoba and the Canadian Pacific Railway has been adjusted by the relinquishment by the company of the provision in their charter prohibiting lines from the United States frontier, in consideration of a Government guaranty of interest upon fifteen millions of Canadian Pacific securities, and a supervision by the Dominion Government of all such communications between American lines and the main and branch lines of the Canadian Pacific Railway, analogous to the regulation of interstate railway lines by commissioners under the clause in the Constitution giving Congress power to "regulate commerce with foreign nations and between the different States." From present indications, this satisfactory adjustment has concurred with other circumstances greatly to increase immigration from England and eastern Canada to central and western British America. The Western States are already connected with Winnipeg by three railway lines, the St. Paul, Minneapolis and Manitoba Railway has also reached the frontier near Killarney and Deloraine, in western Manitoba. Helena, in Montana, will soon be connected with the coal mines at Lethbridge, 200 miles north in the Canadian district of Alberta, and there is an equal probability of the Northern and Canadian Pacific lines forming a similar communication at three different points across the international frontier between Washington and British Columbia. Whenever in this consular district such railway crossings shall be effected, consular agencies will be necessary. There are Canadian ports of entry at Emerson and Gretna, and it is announced that Killarney will immediately be recognized as a Canadian port.

JAMES W. TAYLOR,
Consul.

UNITED STATES CONSULATE,
Winnipeg, March 28, 1889.

PROVINCE OF QUEBEC.

GASPÉ BASIN.

REPORT BY CONSUL DICKSON.

COMMERCE.

The commerce between this consular district and the United States is but nominal. Imports direct from the United States are very limited, although the merchants here carry different kinds of American goods; but they purchase them through jobbing houses at Montreal.

COD-FISHING.

This important fishery has not been as good as last year in this consular district, or along the St. Lawrence and the island of Anticosti. The inshore fishing is thought by many to be decreasing in Gaspé Bay, although as many fish are taken here as were taken years ago; more boats are, however, engaged in fishing, and the schools of codfish

coming to feed inshore are always limited by the food supply. On the St. Lawrence shore from Ste. Anne des Month to Griffin the large and increasing numbers of schools of white porpoise which frequent those waters are considered by competent judges to be the cause of the almost entire extinction of the fishing interests.

MACKEREL FISHING.

The complete failure of this fishery in this district for the past two years is very much felt by the fishermen, who have depended much upon this branch of business for their winter supplies. The same thing, I am informed, occurred many years ago, but as it was followed by a return of fish to the old grounds, so it is to be hoped it will be now.

SALMON FLY-FISHING

opens at this port about the middle of May and extends to the 1st of September. It has been excellent in most of the rivers, which are leased and fished by Americans coming from Chicago, New York, and Boston.

WHALE FISHING,

for which Gaspé Basin was once noted, has dwindled down from ten schooners, employed twenty years ago, to only one fitted out this last year, and the above schooner has just arrived with only eighty barrels of oil, and the captain informs me that this is his last voyage, and with this vessel will close the whaling business in the Dominion of Canada, as this is the only port in the Dominion engaged in it.

PETROLEUM.

Last fall the petroleum fever again invaded this retired spot. A hunter during the summer found a place where besides a flowing well of petroleum there existed a large bed of asphalt, commonly known as a gum bed. He gave samples to a leading merchant of this place and there the matter ended for a time. After considerable excitement the land upon which these discoveries were made is now the property of the International Oil Company of St. Paul, Minn., U. S., and is situated about fifteen miles from the village of Gaspé Basin. This property comprises a tract of 800 acres of land, which was purchased this last spring from the Quebec government and deeded direct to the above company. This oil has a perceptible aromatic odor, is very glossy, and is of a brownish black color. From analysis that has been made it proves to be one of the finest lubricating oils yet discovered.

RAILROADS.

There is a railroad under construction called the Bay of Chaleurs Railroad, a branch of the main line of the Intercolonial Railroad. It branches off from the main line at Metapedia and is to extend to the village of Gaspé Basin, a distance of 200 miles. It is expected that it will be completed to Paspebiac by next fall. It is built by the Dominion and local government of Quebec.

MARINE POLICE

is composed of four steamers and five schooners. The vessels of this force have not been as vigilant in looking after American fishermen this year as in the past two years, but our fishermen have used great caution in avoiding any cause of complaint against them. The steam-cutters *Acadia* and *La Canadienne* are the two which patrol at times around this part of the coast, their rendezvous being this port. The rest of the fleet keep more about the fisheries of Nova Scotia and Prince Edward Island.

NAVIGATION.

This closes about the last of November and the last of the vessels in port leave generally within a few days of that time, when the port becomes isolated until the month of May. Navigation opened here this spring on the 10th of May.

CONSULATES.

Besides our own, the following-named countries have consular officers at Gaspé Basin: Brazil, Italy, Norway and Sweden, Spain, and Portugal.

Declared exports from the consular district of Gaspé Basin to the United States during the year ending September 30, 1888.

Condensed from custom-house entries for year ending September 31, 1888.—Fifty thousand two hundred and fifty quintals codfish, value \$242,575, shipped to Barbadoes, West Indies, Brazil, Italy, and Jersey, Great Britain. Sundries, \$1,555, to New Foundland. Lumber and sundries, \$28,362, to Jersey, Great Britain. Shipped by twenty-five vessels, from 80 to 175 tons, all under the British flag.

IMPORTS.

By vessels all under the British flag, molasses, sugar, salt, and sundries, \$20,560.

PASPEBIAC.

From the consular agency at Paspebiac, in this consular district, for the year ending September 30, 1888, exports declared, 47,600 quintals codfish; value, \$235,000.

EDWARD YOUNG, *Consul*.

UNITED STATES CONSULATE,
Windsor, N. S., July 12, 1888.

MEXICO.

GUAYMAS.

REPORT BY CONSUL WILLARD.

IMPORT, EXPORTS, AND NAVIGATION.

The tables A, B, and C of imports, exports, and navigation of this consular district for the year 1888 show an increase in commercial transactions over the year 1887. The class and character of the imports and exports are the same as of past years. This part of Mexico depends almost entirely on foreign countries for the manufactured goods consumed by the people, two-thirds of which are brought from the United States by rail and sea.

Part of the commercial data was furnished me through the courtesy of the collectors of this port and of the custom-house at Nogales, on the frontier of Arizona.

I have been unable to procure any data from the two small custom-houses, on the Arizona frontier, of Sasaba and Palominas, in this consular district, but it is estimated that the imports, which are all from the United States, will amount to \$100,000.

The southern portion of this consular district (Alamos) is supplied with manufactured goods from the port of Mazatlan, and those from the United States can be placed at \$150,000.

The American-manufactured goods brought clandestinely over the frontier (smuggled), in small quantities at a time, on pack-mules, can be calculated at \$75,000.

Total of American imports.....	\$1, 230, 105. 75
From European via—	
Guaymas.....	\$286, 106. 00
Nogales (in bond and in American vessels).....	125, 000. 00
Total amount of European imports.....	611, 106. 87
Total amount of imports from the United States and Europe for—	
1888.....	1, 841, 212. 62
1887.....	1, 517, 839. 00
Increase in 1888.....	323, 373. 62

The exports are almost exclusively sent to the United States, consisting of gold and silver bullion, gold and silver ores, coined silver dollars, oranges, cattle, and a few miscellaneous articles.

Oranges.—The exports of oranges are slightly in excess of those of last year; young orchards (planted four years ago) are beginning to produce fruit. As mentioned in my last year's report, orange culture in this consular district will figure as an important industry. The soil, climate, and facilities by rail to a market in the United States are all favorable.

The oranges commence to ripen in November, and by the first part of January the great bulk of the fruit has been exported. Dealers from San Francisco, Denver, and Chicago purchase the oranges on the trees, and at their expense they are picked and boxed in boxes made for the purpose (brought from the United States) large enough to contain 200 oranges each. The price paid this year has been from \$7 to \$8 per 1,000 on the trees. The crop this year is estimated at 16,000 boxes. Before the construction of the Sonora Railway but little attention was paid to the cultivation of oranges as an article of export, as the cost of transportation to a market in the United States was costly and uncertain.

Ores.—The exports of gold and silver ores by rail to the smelting and refining works in the United States are more or less the same in quantities and values as in the past year. Most of the silver ores of Sonora contain lead, antimony, and copper, are difficult to beneficiate or reduce, and many of the mine owners find it more profitable to send their ores to the United States than to reduce them at their mines as was done in former years, before the Sonora Railway was in operation.

Cattle.—The export of cattle to the United States has decreased during the past year owing to the demand being less for them in Arizona and New Mexico. The prices are

less at this time than for the last six years. In the northern portion of this consular district bordering on Arizona the climate and grass are favorable to stock-raising; the cattle graze in the open air the year around, and do not need artificial shelter. The cattle interests are becoming every year of more importance. Some attention is being paid to improving the stock by importing high-grade bulls from the United States to cross the native breed.

Torote bark, mentioned in my last annual report as being shipped through this consular district en route to Europe (this bark being used for tanning and dyeing), owing, as is alleged, to the high freights by rail and sea, is now shipped by European sailing vessels as part of their return cargoes from the Lower California coast.

Phosphates.—The export of phosphates (phosphate of lime) from the islands in the Gulf of California still continues, and is carried principally by European vessels that enter and clear at Guaymas.

Exports to the United States by sea from Guaymas, \$307,249.

Exports to the United States by rail from Nogales, \$636,333.

The exports through the small frontier custom-houses on the Arizona and Sonora frontier I am unable to obtain. In cattle, ores, and miscellaneous articles can be estimated at \$100,000.

Silver and gold ores shipped by rail through Nogales and those sent from Alamos via Mazatlan, value \$450,000. Alamos bullion and silver dollars sent via Mazatlan, \$300,000.

Total exports in—

1888	\$1,793,582
1887	1,788,887

Increase in 1888..... 4,695

The exports to Europe are made indirectly, with the exception of phosphates, through the United States.

Navigation.—The tonnage at this port is calculated according to Mexican measurement (and gives an increase over the measurement of the United States and England). The number of vessels is less than that of the past year, which is accounted for by the decrease of trade at the coast ports. Table C is from the statement furnished me by the captain of port.

Total tonnage in—

1888	43,007
1887	53,615

Decrease in 1888..... 10,608

One-half of the European tonnage is of vessels that come in ballast to load phosphates.

The laws governing navigation, exports, and imports are with few modifications the same as of the previous year. Importers of foreign merchandise by Mexican vessels receive a rebate of 2 per cent. on the import duties. This is given by the Mexican Government as an inducement to Mexican ship-owners to engage their vessels in foreign trade in which from this port only one vessel (a steamer) is employed. As mentioned in former reports the foreign commerce is controlled by the Mexican, German, French, and Spanish houses, there being but two American importing houses in this consular district, whose sales of American goods will not exceed \$200,000 per annum, and no English ones; yet the bulk of the imports and exports are from and to the United States.

The California and Mexican steamship line, an American company, whose steamers for years past were engaged in the trade between San Francisco, United States, and Guaymas (touching at all intermediate ports), suspended their monthly voyages during the year. This company was under a contract with the Mexican Government to carry the mails and received a subsidy of \$1,500 per round voyage. When the contract expired one year ago it was not renewed, but during the year the steamers have made irregular voyages. The Mexican Government during the year celebrated with Joaquin Redo (a Mexican capitalist) a contract for a line of steamers under the Mexican flag to run between San Francisco, United States, and Guaymas, touching at all the intermediate ports, to make monthly voyages and carry the mails, with a subsidy of \$2,700 per round voyage. This line has not yet commenced making regular voyages.

The International Steamship Company, that obtained a contract with the Mexican Government in 1886 to run monthly or semi-monthly steamers from San Diego, United States, to San José de Guatemala, Central America, touching at all intermediate ports of Mexico, twenty-two in all, including Guaymas, suspended during the year their voyages. This company was to carry the mails and receive a subsidy of \$8,000 per round voyage and \$60 per head for all bona fide colonists brought to Mexico in their steamers. Several irregular voyages were made, and the alleged cause of not continuing was the lack of remunerative traffic.

The Pacific Coast Steam-ship Company, an American company, since October last have made monthly voyages from San Francisco to Guaymas, touching at the intermediate ports, but without subsidy from the Mexican Government, and propose to continue during the coming year.

The small coast steamers (under the Mexican flag) *Altata* and *Porfirio Diaz* make an occasional voyage to this port, the trade not being sufficient to warrant regular voyages.

American sailing vessels arriving at Guaymas during the year have been few. Inward cargoes are generally lumber from California and Oregon, United States; return cargoes gypsum, from Lower California, and cedar logs from the coast south outside of this consular district.

European sailing vessels arriving, not chartered for phosphate, are laden with assorted merchandise from Germany and England; their return cargoes ores and dye-woods, also outside of this consular district.

Mexican sailing vessels are engaged exclusively in the coasting trade, with coast ports as far south as Manzanillo.

INTERNAL IMPROVEMENTS.

The promise of an impulse in this direction, as set forth in my report of last year, has not been verified by the commencement of work on any of the projected railways mentioned under the franchises or concessions granted by the Mexican Government to the companies and individuals holding the same.

The railway projected from this port to Alamos, approximate distance 240 miles (the franchise or concession was granted in 1837): A survey of the route has been made and plans and profiles approved by the Government, and it is said that construction will be commenced during the coming year. The railway projected from the port of Mazatlan (consular district of Mazatlan) to run northwesterly near the coast, entering this consular district and connecting with the Sonora Railway (100 miles north of Guaymas), length approximately 800 miles): The concession for this road was confirmed by the Government in February of the present year. A survey of the route, I am informed, has been commenced at Mazatlan.

The railway projected from the frontier of Chihuahua and New Mexico (United States), to run south and west; to enter this consular district near Fronteras: No work of construction commenced, and the same can be said of the projected railway from Ensenada de Todos Santos, Lower California, which proposes to enter the western portion of this consular district, crossing the Colorado River above Lerdo, etc.

The Sonora Railway, which connects this port with the United States at Nogales, in the Arizona frontier, and from that point with the American system of railways, has been in operation since 1882, and with but slight interruptions (caused by wash-outs) run daily freight and passenger trains. The report of the gross and net earnings of this road has not been published, and for this reason I am unable to give them.

Before the construction of this railway all the imports and exports (excepting a few that came by wagons across the frontier of Arizona) for this consular district passed through Guaymas. The only regular communication with the outside world was by steamers and sailing vessels. American manufactured goods and machinery were received only from the Pacific sea-board of the United States. Since the Sonora has been in operation all classes of American manufactured goods can be brought here with the same facility from the Atlantic sea-board as from the Pacific. Merchants can now receive goods from Chicago and New York which before came entirely from San Francisco, Cal.

MINES AND MINING INTERESTS.

Veins of iron, lead, copper, and antimony are found in different parts of this consular district, but are not worked, owing to the lack of capital and cheap transportation.

Veins of gold and silver are abundant, and are worked with fairly satisfactory results where sufficient capital is employed for development. There are fifteen American companies (incorporated in the United States) working mining properties in Sonora and four English companies incorporated in London. One of the largest silver mines (so considered) at Trinidad is owned and worked by one of the above English companies.

The amount of gold and silver bullion extracted from the Sonora mines is difficult to obtain, but it can be placed at not less than \$2,500,000. The machinery used for reducing the ores is brought almost exclusively from the United States.

The coal deposits (anthracite) of Sonora, which are extensive and valuable (mention of which has been made from time to time in my annual reports), remain undeveloped, and no doubt will remain so until cheap transportation can be obtained to bring the coals to tide-water or a railway to find a market. (The distance from the coast is 100

miles.) The only use made of this coal is by the mining companies in the immediate vicinity of the deposits or veins, who utilize them for steam-works at their mining establishments.

A mining law, having for its object the fomenting of the mining interests, was approved by the Mexican Congress last year. The law gives the President of the Republic the power to grant mining zones or tracts of mineral lands to individuals or companies under contracts, with certain privileges and obligations, on the condition that the mines embraced in said zones or tracts are worked. Several such grants have been given the past year (for mines of gold and silver) in this consular district. If the object contemplated by this law (of June, 1887) was carried out in good faith, in working the mines embraced in these zones, which vary in extent from 7 miles in breadth to 15 miles in length and sometimes more, having the capital ready and secured for the purpose when said grants are given, an impulse would undoubtedly follow this important industry; but in many cases these grants are obtained for speculative purposes only, to be sold to others, and failing in this (after a certain time and no work being done) the grants become invalid, in the mean time no prospecting can be done in the zones. Under this law deposits or veins of coal, iron, and quicksilver throughout Mexico are free from all taxes, duties, or contributions and on all products produced by them. When the railways now projected through this consular district are constructed, it will facilitate to a great extent the development of the mineral resources lying to eastward along the foot-hill of the Sierra Madre Mountains that to-day are lying dormant.

AGRICULTURE.

Wheat, corn, and beans are the staple agricultural products of this consular district (Sonora). The wheat crop was an abundant one this year, but that of corn and beans less than the average. On the large ranchos or farms agricultural implements and machinery of American manufacture are coming into general use, the old primitive implements and style of farming gradually being abandoned. Cotton is produced in small quantities; the single cotton-mill of Sonora of six hundred looms consumes the crop. Sugar cane is grown to a very limited extent, and brown sugar made from it into cakes of from 8 to 12 ounces each. The supply thus obtained is not sufficient for home consumption. Sonora depends for her sugar on the Mexican coast south and on the United States. One-third of the refined sugar consumed is imported.

The agricultural lands are confined to the valleys of the rivers and streams, and these lands in proportion to the area of the State will not exceed one-fourth; the remaining pasture and mountain lands are suitable for stock ranges, etc.

PUBLIC LANDS AND COLONIZATION.

The condition as to the public lands of this consular district are the same as mentioned in my last annual report; as the surveys are not finished none can be purchased or titles given from or by the Government to those wishing to acquire them. The colonization project at Ensenada, bordering on the west of this consular district in Lower California, at present is in a less prosperous condition than was stated in my annual report of last year. The model colony (so called) of Topolobampo, founded by Col. A. K. Owen on the south of this consular district in Sinaloa, is said to be on a better basis than that of the past year, more land being cultivated, and the crops raised being sufficient for the support of the two hundred persons that compose the colony, who are, with but few exceptions, from the United States.

FOREIGN RESIDENTS.

The number of foreign residents of all nationalities will number about 2,200, of which one-half are American citizens. The resident Americans are employed principally in mining, as owners, employes, mechanics, laborers, etc.; some have stock-farms in the northern districts, and but few are engaged in commercial pursuits. The resident English will not number more than 200, also engaged in mines and mining, but none as merchants. The German and Spanish are engaged almost exclusively in commerce, as importers, shopkeepers, etc., and will number, more or less, 350. The French, Italians, and other nationalities, about 500, engaged in various pursuits, as merchants, shopkeepers, farmers, gardeners, laborers, etc. The foregoing do not include Chinamen; these are about 100, who are employed as shoemakers, cooks, gardeners, etc.

In both American and English mining companies five-sixths of the workmen are natives of the country.

CONCLUDING REMARKS.

The sanitary condition of the coast has been excellent during the year, no epidemical or contagious diseases having appeared in any part of this consular district.

Revolution and civil disorder has apparently ceased in this part of Mexico; for the past ten years there has been peace and quiet. Political questions are solved without recourse to bayonets and bloodshed. The question of Indian rule or supremacy in the most fertile portions of Sonora has been definitely settled, both in the Yaqui Valley with the Indian tribe of the same name, who had been in open rebellion against the State government from 1881 to 1887, as well as in the northern districts of the State bordering on Arizona, which are now free from the raids of Apache Indians, who for years desolated that region, collecting "tithes of blood and plunder" from the people.

On the frontier of this consular district and the United States (Sonora and Arizona) there exists a good understanding between the authorities of both countries, no question of an international character existing.

The outlook for prosperity in the future, under such conditions, can be considered as hopeful and promising, and when the projected railways mentioned are realities, it will give greater commercial facilities between this part of the Mexican coast and the United States, and a corresponding increase in the trade and traffic should follow. What is greatly needed is a modification of the many formalities that hamper the importation of foreign goods under the Mexican custom-house regulations now in force.

A. WILLARD, *Consul.*

CONSULATE OF THE UNITED STATES,
Guaymas, December 31, 1888.

TABLE A.—Declared imports at Guaymas, Mexico, for the year ending December 31, 1888.

Description.	United States.		Europe.	
	Quantity.	Value.	Quantity.	Value.
	<i>Pounds.</i>		<i>Pounds.</i>	
Agricultural, mining implements and lumber	7,709,703	\$203,345.26	59,148	\$18,436.85

NOTE.—The above is tonnage by the Mexican measurement, which gives an increase over that of the United States or England.

VERA CRUZ.

REPORT BY CONSUL HOFF FOR THE YEAR 1888.

The accompanying table shows that there has been a gain over last year of exports from Vera Cruz to the United States of about 12 per cent., which evidences a general healthy gain, as we turn their goat skins into morocco, their hides into leather, their marble onyx into ornaments, their rubber into combs, their broom-root into brushes, their coffee into drink, their vanilla into essence, their wood into furniture, and their

ore into silver. There is hardly an article exported from here that is not necessary to our artists or manufacturers and gives employment to a great number of hands to cut, turn, mold, or transform into many useful and necessary articles.

TRADE.

Trade here shows some improvement. There is starting here another petroleum refinery by the "Waters, Pierce Oil Company," whilst we already have "La Compañia de Petroleo." By refining here they save nine-tenths of the duties, which is an object.

SHIPPING.

The tonnage, flag, and class of vessels entering and leaving this port is hereto annexed and tabulated. The whole number of tons entered and cleared from this port was 342,798, of which the United States had 94,628, England 74,998, and Spain 107,933 tons. There were of American vessels, 64 steamers and 21 sailing ships that traded at this port. Of English, 37 steamers went to the United States, of a tonnage of 55,937, making the whole trade from here to the States a total tonnage of 150,565 tons.

HARBOR IMPROVEMENTS.

The harbor works have made great strides in the last year. Although the work does not yet show, it is rapidly progressing; 48,000 tons of stone have already been dumped in their line of the mole, and 18,000 more ready to dump as fast as the weather will permit. Of the inshore end 1,353 is finished, 97½ feet wide, and a railroad track laid upon it, leaving 3,579 feet to be finished, but into that the 48,000 tons of stone above referred to have been dumped. The whole length of the mole when completed will be 4,973 feet and 97½ feet wide. It makes the undertaking something of a job, as some parts of it are 50 feet below low water-mark.

RAILROADS.

The Inter Oceanic Railway is about being commenced here. Its title is "Inter Oceanic Railway Limited, London." It is to extend from here to Acapulco via Jalapa, Puebla, to the City of Mexico, 280 miles, and thence to Acapulco, 300 miles, making a distance of 580 miles. It will be a narrow gauge, 3 feet, the whole to be finished in two and a half years. A part of this road, some 180 miles, is already built, and the whole will be a great improvement for the Republic of Mexico.

JOSEPH D. HOFF, *Consul*.

UNITED STATES CONSULATE,
Vera Cruz, January 21, 1890.

SOUTH AMERICA.

ARGENTINE REPUBLIC.

REPORT BY CONSUL BAKER, OF BUENOS AYRES.

The Argentine Republic, as never before, appears to be on the high road to national prosperity. The "boom" which I referred to in my last annual report has become even more pronounced and decided. In every department of industry, trade, and commerce an increased impulse is everywhere perceptible. The spirit of progress and "speculation" seems to pervade the whole country. A general push, more emphatic than ever before in the history of the Republic, is the order of the day and the programme of the future. There may be some weak points in the movement, but it is neither artificial nor fictitious. It seems to be real and genuine. Look where we will, in every direction we see the signs of progress; and they are too general to be illusive, and too emphatic to spring from any other source than a mighty current which is bearing the country along with a force which the minor impediments of bad financial management and a persistent disregard of the laws of trade can not weaken.

THE ARGENTINE "BOOM."

The impulse which commenced here in Buenos Ayres is now felt all through the different provinces. New farms, new estancias, new industries, new railways, new public works, new banks are cropping out in all directions; and with the increasing immigration of new laborers from Europe and the constant accession of new capital from abroad, seeking profitable investment here, the development which is now going on may be considered as almost marvelous. All classes of the people are aroused to the possibilities of the new departure. Many perhaps are being carried beyond the bounds of prudence into new avenues of speculation, and some may be overwhelmed in the mad race for riches; but the movement is onward—unmistakably onward. The continuance of the suspension of specie payments, the decree of the Government making paper a legal tender for the payment of debts, and the constantly increasing volume of irredeemable currency which the new national banks are putting into circulation make it easy to float the most extravagant schemes for "getting rich" quickly; and the whole community is almost off its head in the midst of the excitement which everywhere prevails.

PEACE AND PROGRESS.

What greatly adds to the business impulse and spirit of development which nowadays more than ever characterizes the people is the political quiet which pervades the country. Revolutions and attempts at revolution are matters of the past. All through the extent of the Argentine Republic the guaranties of the constitution now have the sanction of the people and the laws are permitted to be peacefully executed. Labor is more and more respected and honored, and capital finds ready investment with more confidence than ever before. No one any longer thinks of or fears internal commotions or civil disturbances. The Argentine citizen's love of country no longer manifests itself by trying to get forcible possession of the Government, but rather by seeking to increase the wealth and production of the Republic. The new President, in his late message to the Argentine Congress, sees in all this "good ground for congratulation and for new and noble hopes." He says:

"My policy has been peace, toleration, and conciliation. The fullest liberty for the expression of public opinion and the free exercise of personal rights is the most eloquent phase of national life. The National Government at last is respected throughout the interior, the different provinces thereof giving it frequent proofs of support and confidence.

"A comparison with times, unfortunately not very remote, shows palpably the immense progress which has been made materially and in the working of the institutions under which we live. Until quite recently the political chapter in public documents like this

was simply an index to all the horrors of civil war, attempts on the lives and properties of citizens, and a catalogue of outrages on an oppressed people by ignorant leaders, bred in the desert, with an outward semblance of civilization, but none the less arbitrary and to be dreaded. Young men of the present generation can remember how the most trivial local disturbance gave rise to bloody struggles, exile, and a complete abandonment of all labor, the scourge spreading from province to province, the only means of finally conquering the insurgents being force and death. Abroad the very name of the nation was a synonym for anarchy, thus preventing all chance of economic life and credit for the country and destroying all stimulus for labor by the incessant state of uneasiness. How great were the burdens of those troublous times, when compared with the bright and hopeful present, as the measure of our progress."

INTERNATIONAL RELATIONS.

During the past year the relations of the Argentine Republic with the different nations of Europe and America have continued to be of the most friendly character. The boundary question between Chili and the Argentine Government still remains unsettled, but the negotiations for determining the line which divides the two countries are quietly proceeding within the stipulations of the 23d of July, 1881.

The settlement of the limits controversy between the Argentine Republic and Brazil was referred to a joint commission, which, with a technical staff of assistants, has been at work for more than a year in the exploration of the disputed territory in Misiones. The only doubt which arose was in reference to the identification of river San Antonio-guazie, sustained by the Argentine commissioners and resisted by the Brazilian, and it is understood that an understanding has now been reached on the subject. In regard to the boundary question with Bolivia, nothing has been done during the past year, both Governments maintaining the existing *status quo* in the most friendly manner.

THE TERRITORIES.

The national territories, whose provisional organization I have referred to in former reports, continue to give signs of development and vigorous growth. The influx of population into these incipient provinces or States, the opening up of new estancias, the establishment of schools, the organization of courts of justice, all these things point to the fact that it will not be many years before the four territorial governments into which Patagonia is divided, together with those of the Chaco and Misiones, will be knocking for admission into the Argentine Union on terms of equality with the original fourteen provinces.

IMMIGRATION.

According to the official returns the number of immigrants arriving in this country during the year of 1887 was 137,426, against 93,116 in 1886. Already, however, for the eleven months of the present year the number of arrivals reaches to 128,797. The Government has been making more than ordinary efforts to foment emigration from Europe to the Plate River and the late Congress voted the cost of fifty thousand passages, to be advanced to agriculturists and artisans to enable them to come here. Dr. Navarro, the commissary of immigration, is now in Europe to complete arrangements for putting the embarkation of emigrants on a better basis.

There is no doubt the efforts of the Argentine Government thus to induce immigration are having a grand success with the poorer classes of Europe, who are without work and without hope, and the change they make in coming here is for the better. Their condition here, no matter how inadequate the wages, no matter how miserable socially, morally, and politically they may find themselves here, is far in advance of what they have left behind them. There is no doubt that they can all find work; and, by hard struggles, manage after a while to become more comfortable in their surroundings, but under such circumstances and self-denials as would not only discourage but quite overwhelm with despair any one who had been accustomed to the higher plane of civilization in the United States. It is on this account that I once more entreat our American citizens not to try their fortunes down here. They will find everything so different and so primitive in the interior of the Argentine Republic compared with what they have enjoyed at home, that they are sure to be thoroughly disappointed; and if they come without the means of returning, as too many of them do, they will soon find themselves utterly destitute, begging the charities of a people whose language they can not speak. Such distressing cases come under my observation every few days, and tax all my efforts to assist them, even temporarily. With the immigrants from the overcrowded shores of the Mediterranean the situation is altogether different. They not only find their countrymen here in large colonies, but they are so similar in language and habits with the people of the country that they at once are able to make themselves understood and soon imperceptibly assimilate with the native population.

RAILWAYS.

There continues to be a great movement throughout the Argentine Republic in the construction of railways. So great are the number of new concessions granted by the National Congress and by the different provincial legislatures that I find it impossible to name them all. Up to the meeting of the last Congress there were national concessions for seventeen different lines, of which thirteen enjoy the guaranty of the Government. These guaranteed lines represent a total length of 7,961 kilometers (4,975 miles), and the aggregate length of the other lines is 1,272 kilometers (795 miles), making a total of 5,770 miles. Among these are the following, viz: The Chaco and Tartagal Railway; the Reconquista and Formosa (Chaco) Railway; the Bahía Blanca and Villa Mercedes Railway; the San Juan and Salta Railway; the Chumbicha, Tinogasta, and Andalgá Railway; the Goya and Monte Caseros Railway; the Resistencia and Metán Railway; the San Cristobal and Tucuman Railway, etc. A line from San Juan to Cabra Corral in Salta is being surveyed; as also one from Mendoza to San Rafael; also the line from Cobos to Salta, via Lagunilla; as also several others of less prominence.

The following roads are in the course of construction, to wit: The extensions of the Northern Central, the road now being opened beyond Tucuman, as far as Chilcas. The branches from Dean Funes to Chilcito and from Chumbicha to Catamarca have the road-beds completed and the track-laying has commenced. Beyond Chilcas, towards Salta and Jujuy the work is still progressing, but there are many engineering difficulties to overcome and not much has yet been accomplished. The line from Buenos Ayres to Mercedes, which is a link of the Transandean Railway, is now completed and open to traffic, thus giving a through line from Buenos Ayres as far as Mendoza. Work continues to progress on the link from Mendoza towards Valparaiso, Chili, some of the track having already been laid, and by the end of the year it is expected that the Uspallata Pass of the Andes will be reached. For the construction of the railway from Monte Caseros to Corrientes and Posadas in the Misiones the necessary materials are now being received and the work has commenced. The new line from Rosario via Sunchales to Tucuman is being rapidly pushed forward, and the rails are laid for 50 or 60 miles beyond Sunchales.

The last session of the Argentine Congress, in response to the recommendations of the President, made a very firm stand against the granting of any more charters or concessions with Government guaranties, and the fact that numerous applications were made for new lines without such guaranties shows that the condition of the country is now so promising that capital is ready to embark in such enterprises without Government aid.

MARTIN GARCIA BAR.

One of the causes which renders the interior navigation of the Argentine Republic difficult and expensive is the existence of bars and other obstacles in the channels of the rivers. One of the most important of these difficulties is the bank which sets across the La Plata River, near the island of Martin Garcia, and the series of bars in the Uruguay River. At the former sometimes, in seasons of low water, as many as fifty vessels at a time are estopped from passing further up the rivers, and have to wait at anchor for a tide sufficiently high to float them over. It is now proposed to organize a commission, in connection with the Uruguayan Government, for the construction of certain works which would remove these obstructions to navigation. The Argentine Government will probably take the initiative in the matter.

PORT WORKS.

The Government mole at the city of Concepcion, on the Uruguay River, has at last been completed, together with a bridge and custom-house, at a total cost of \$410,000.

An iron mole is also in course of construction at San Nicolas, on the Paraná River, and works for the improvement of the channel in front of the town have been surveyed.

The works for the improvement of the port of Rosario have recently been stopped, for the reason that recent changes and deviations in the channel of the Paraná have required some modifications in the plans. From what I learned on a recent visit to Rosario, it would appear that a bar is forming directly along the city front, which bids fair, unless wing-dams are properly constructed above the city, to send all the water to the other side of the river, thus rendering the port quite useless. The National Government proposes, if possible, to avert such a misfortune to that growing city.

THE RIACHUELO PORT.

The canalization of the Riachuelo de Barracas, just south of the city of Buenos Ayres, continues to be actively carried on under the most advantageous conditions. In the course of last year the excavations amounted to over 1,000,000 cubic meters. The cost

of the work up to the end of the last year, since the beginning, has been \$6,500,000. The port dues, however, already give an interest of 6 to 8 per cent. on the capital expended, notwithstanding its incomplete state. The following table shows the proportion of sea-going vessels which last year took advantage of the facilities offered by the moles of the Riachuelo port, as appears by the last annual report of the maritime prefect:

Arrivals and departures of sea-going vessels.

Port.	Arrivals.				Departures.			
	Sailing vessels.		Steamers.		Sailing vessels.		Steamers.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.
City Roads.....	2,057	579,181	583	924,354	708	392,255	620	1,294,901
Riachuelo Port.....	714	518,467	222	292,227	821	467,344	144	461,344

Arrivals and departures of vessels in the river trade.

Port.	Arrivals.				Departures.			
	Sailing vessels.		Steamers.		Sailing vessels.		Steamers.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.
City Roads.....	2,774	174,113	887	299,660	8,625	472,631	932	308,959
Riachuelo Port.....	16,329	630,856	16,976	297,511	16,636	618,044	16,880	282,631

It will be seen from these figures that, while a very considerable amount of the foreign shipping now finds its way to the Riachuelo, the coasting or river trade is almost exclusively confined to that port. This is owing to the greater facilities it offers for handling cargoes. It now possesses 4,500 meters of moles, and is capable of receiving ships drawing 22 feet and 6,000 tons burden.

BUENOS AYRES PORT WORKS.

The work on the Buenos Ayres port, which I have heretofore mentioned in my annual reports, has been prosecuted during the past year without intermission, and the first section will probably be ready within the stipulated time. The basin is now quite completed to the proper depth and the embankments are nearly finished. This basin is 1,095 meters long by 100 in width. About 300 meters of wharf are also completed, and large quantities of material are now on the ground for the rest of this work. The outside piers are likewise progressing to completion and the piles are all in position. The earth works of the other docks are also under way. The company having the contract have at present nearly 2,000 men employed on the works. The commerce of the city is looking forward with great interest to the day when the use of lighters and carts in the handling of cargoes will be done away with forever.

THE RIVER OR INTERIOR COMMERCE.

The river commerce of the Argentine Republic, embracing the carrying trade of the Rio de la Plata, the Uruguay, and the Paraná rivers, with their various affluents, shows but little change since the returns of last year. I give a comparison of the two years below:

Class.	Arrivals.				Departures.			
	1886.		1887.		1886.		1887.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.
Sailing vessels.....	17,504	650,048	18,701	749,921	19,569	689,699	21,001	838,640
Steamers.....	7,297	1,986,406	6,124	1,485,091	7,896	1,898,208	5,822	1,621,053
Total.....	24,801	2,636,454	24,825	2,235,012	27,464	2,587,907	26,823	2,459,693

The average size of the sailing vessels in the river trade last year was 40 tons; the average size of the steamers was 260 tons.

INTER-PROVINCIAL COMMERCE.

The inter-provincial commerce by river during the year 1887 reached to \$73,821,583. For the seven years from 1881 to 1887, inclusive, the following are the comparative figures:

Movement of river commerce.

Year.	Products of the country.	Imported merchandise	Total.
1881.....	\$7,856,311	\$19,646,157	\$27,502,468
1882.....	8,108,553	21,852,594	29,961,147
1883.....	11,255,977	25,394,370	36,650,347
1884.....	14,615,401	29,689,475	44,304,876
1885.....	17,556,491	31,382,385	48,938,876
1886.....	13,501,820	37,398,110	50,899,930
1887.....	29,897,027	43,921,556	73,821,583

Of the movement of the produce of the country by river conveyance from the interior the following articles were the most prominent.

Articles.	Quantity.	Value.	Articles.	Quantity.	Value.
Native rum and alcohol, liters.....	1,066,435	\$126,971	Potatoes...kilograms...	27,641,693	\$1,106,668

I may add in regard to the river traffic that it is now well provided with a number of fine steamers, arranged for passengers as well as freight, and furnished with all the modern improvements of Clyde-built vessels, including the electric light. The company which, having bought out all other interests, now has the exclusive control of the river trade of the Argentine Republic, is owned in Scotland; and its intention is still further to extend its field of operations by building a smaller class of steamers to navigate the smaller affluents of the Paraná River.

PROGRESS OF AGRICULTURE.

I have seen no estimate of the approaching harvest in the Argentine Republic, but there has been put down in seed a larger breadth of land than ever before, and the prospects at present for every variety of crop were never better. If no untoward events shall intervene to defeat the generous promise, the harvests of the present year will be the largest ever produced in the country. In wheat, maize, and linseed there is sure to be a very large surplus for export. The progress which agriculture is making all over the republic is the subject of general comment; and already this country is appearing as a factor in the question of the bread supply of Europe. The following table gives a comparison of the shipments of crop products of the Argentine Republic since 1882:

Articles.	1882.	1883.	1884.	1885.	1886.	1887.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Wheat.....	1,705	60,754	108,409	78,493	37,864	237,865
Flour.....	548	4,844	3,734	7,447	5,262	5,401
Indian corn.....	107,327	18,634	133,710	197,859	231,660	361,844
Linseed.....	23,351	23,061	35,901	69,426	37,689	81,208
Baled alfalfa.....	10,771	11,460	11,846	11,765	12,408	12,375
Barley.....	1,100	177	362	2,109	2,661	4,194
Peanuts.....	423	2,617	1,992	2,229	769	3,867

Owing to bad weather just before the maturing of the crops of 1887-'88, and which considerably reduced the yield, the exports of the present year will show a decrease over those of 1887. The returns for the three quarters, up to September 30, give the exports as follows: Flour, 4,559 tons; wheat, 172,353 tons; Indian corn, 147,932 tons; linseed, 39,573 tons; alfalfa, 6,813 tons; peanuts, 1,370 tons, etc.

Of the exports of flour during the year 1887, 3,167 tons went to Brazil, 1,095 tons to Germany, 410 tons to England, and the rest to various ports; of the wheat, 145,977 tons went to England, 43,486 tons to Belgium, 13,582 tons to Italy, 17,197 tons to France, 10,495 tons to Germany, and the balance to various ports; of the Indian corn, 177,769 tons went to England, 98,868 tons to France, 27,646 tons to Belgium, 24,456 tons to Brazil, with various ports for the balance. The linseed nearly all goes to England; the peanuts to France for the manufacture of olive oil, and the baled alfalfa to Brazil.

THE MINING INDUSTRY.

There is nothing new or interesting to be said in regard to the mines and mining of the country. There is as yet almost nothing to show for the amount of money which of late years has been invested in costly mining machinery. The different gold-mining companies, and especially those owned abroad, are periodically publishing exaggerated reports of what they are doing and of the prospects of very speedily finding the precious metal in paying quantities. This is done, I suppose, either to keep up the drooping spirits of anxious stockholders, or in order that those who are carrying heavily may unload on others who may be induced to try their fortunes in an industry which, with all the parade which has been made about the existence of gold in the Argentine Republic, has never yet paid anything on the capital invested. The sure test by which may be learned what the various gold-mining companies are doing is the table of exports, for the reason that their product would be at once sent out of the country for refinement, etc. The following are the shipments for last year:

Description.	Quantity.	Value.
Copper:		
In bars..... kilograms.....	143,287	\$57,815
Mineral..... do.....	4,110	1,644
Silver, mineral..... do.....	106,780	53,090
Lead ore..... do.....	156,936	12,554
Silver, pure..... do.....	1,669	61,753
Total.....		186,356

Thus far, however, for the year 1888, the returns show quite an increase in the shipments of minerals and for the first time gold appears in the list of exports. I give below the mineral exports for the three quarters ending September 30:

Description..	Quantity.	Value.
Gold dust..... kilograms.....	325,524	\$55,101
Bismuth..... do.....	35,072	140,288
Copper in bars..... do.....	115,770	46,308
Tin..... do.....	301,635	150,818
Silver, metal..... do.....	11,070	110,700
Copper, mineral..... do.....	262,622	48,250
Silver, mineral..... do.....	321,000	161,909
Lead, mineral..... do.....	96,316	7,706
Silver, pure..... do.....	12,837	447,969
Total.....		1,196,139

I think the gold referred to in the above table was the product of recent mining operations in Tierra del Fuego. The explorations made near the Bay of San Sebastian by Mr. Popper have developed the existence of valuable gold deposits in that vicinity, and he lately returned to that point with a full complement of miners and mining apparatus, for a more extended survey. Several California miners, who spent some time in examining the country, have informed me that while there are a number of places where gold can be procured in limited quantities, yet they doubt, until there has been a more careful exploration, if any of the present diggings will pay expenses.

I do not surrender the opinion which I have heretofore frequently expressed, that there are immense deposits of gold, as well as of nearly all the other valuable metals, in various parts of the Argentine Republic, but in order to their development it will require a more careful scientific investigation into the geology of the country than has yet been attempted by the Government.

In regard to coal, the discovery of which has already been heralded with unusual parade, nothing whatever has yet been done towards its exploitation. None of it has thus far been utilized. And so also with the immense petroleum reservoirs which have been discovered in the provinces of Mendoza, Salta, and Jujuy. Companies to work these deposits have been formed, and to assist them in producing the home material a very high protective tariff has been placed on the article from the United States; but thus far the Argentine ore has not come upon the market.

THE NATIONAL FORESTS.

The lumber of the United States still in increased quantities continues to supply the demand for building purposes. While there are forests of soft woods in the Argentine Republic, their distance from the sea-board or great rivers makes it impossible to market them as cheaply as they can be put down here from North American ports. The shipments to the River Plate, instead of gradually falling off, seem to increase every year. In 1885 the quantity of white and yellow pine received here from the United States was 9,550,-329 square meters; in 1886 it was 10,789,016 square meters; in 1887 it was 14,579,326 square meters.

At present the Argentine forests only furnish the hard woods of commerce, the *Graú Chaco* and the *Miscines*, to say nothing of the upper interior provinces, offering inexhaustible supplies of the most exquisitely colored hard woods to be found in the world. Here in the country these woods, and particularly the *quebracho* and the *algarrobo*, instead of finding such uses as their fineness and susceptibility to polish especially render them adapted for, are only employed in supplying the heavy joists and beams in house and hydraulic constructions. It looks like a short-sighted, false economy to make use of these precious woods for such purposes. The demand for Argentine hard woods is gradually increasing among the cabinet workers of Europe, but thus far the amount which finds a market abroad is very small when compared with the quantity that the Argentine Republic is able to furnish. The following are the returns of shipments for the last four years:

1884.....	\$394,343
1885.....	339,020
1886.....	826,623
1887.....	330,214

If the quality and the intrinsic value of these woods were more generally known, I am sure there would be an increased sale of them in Europe. In the Paris exposition there will be on exhibition a very large variety of the hard woods of the Argentine Republic, and it will be well worth the while of parties interested in the matter to examine for themselves the wonderful polish which they take, and the marvelous coloring which they present. A special report on "The Woods of the Argentine Republic," which I made several years ago, and which was published in No. 34 of Consular Reports, furnishes an extended description of the most remarkable of these woods.

THE CATTLE INDUSTRY.

The "saladero," or cattle industry of the Argentine Republic continues to be depressed and unsatisfactory. Owing to the partial failure of markets abroad for the products, a number of the cattle-slaughtering establishments have been closed during the last year. The shipments for 1887 are even less than for the previous year; and this in spite of the fact that the export duty was repealed for the express purpose of assisting the industry. The following table gives a comparison of the last three years:

Articles.	1885.	1886.	1887.
Dry hides.....	\$7,511,919	\$6,267,592	\$8,408,742
Solid hides.....	4,488,204	3,649,287	3,639,095
Jerked beef.....	4,204,077	3,735,820	2,398,424
Bones and bone-ash.....	782,464	1,715,158	788,777
Hide cuttings.....	80,465	74,468	70,844
Horns.....	159,896	149,431	182,026
Tallow.....	3,489,139	1,715,158	788,777
Extract of meats.....	56,848	169,991	75,888
Total.....	20,772,762	17,479,905	16,352,573

Except for the demand for ox and cow hides, which has continued during the year, especially in the United States, the showing would be still more unsatisfactory. The jerked beef has heretofore found a steady market in Brazil and Cuba, but as the demand is gradually decreasing the product also shows greatly reduced proportions. In 1886 the shipments amounted to 37,388 tons, and in 1887 they only reached to 23,984 tons, of which only 5,734 tons went to Brazil and 7,830 to Cuba.

FRESH-MEAT SHIPMENTS.

There has, however, during last year, been an increased movement in fresh-meat shipments, which now, with large freezing establishments at different points on the La Plata and Paraná Rivers, have come to be one of the permanent industries of the country. While the business, however, continues to assume larger proportions, if we may infer from the reports of the companies engaged in the export, the profits are not yet at all satisfactory. The following are the comparative returns of shipments for the last four years of frozen carcasses:

Year.	Quantity.	Official value.
1885.....	2,862,270	\$75,323
1886.....	7,350,671	360,508
1887.....	12,038,889	963,112
Nine months of 1888.....	13,923,098	1,113,847

These shipments consisted entirely of mutton, and the greater part went to Liverpool and London, but they failed to find a market, except at figures which barely paid cost and expenses. I am advised that considerable of the meat was hardly in a marketable condition when it reached its destination. To act as a stimulus to the frozen-meat export the Argentine Congress at its last session passed a law providing for a bounty to those engaged in the business, the effect of which will doubtless be to put the trade on a more satisfactory basis.

SHIPMENTS OF CATTLE TO EUROPE.

This bounty law also applies to the shipments of live-stock on the hoof; but it is very questionable if any benefit will ever accrue from it, owing to the great distance across the tropics which the cattle will have to be carried to reach a market. Were there facilities for the proper stall-feeding of the stock, before starting with it, it might be able to stand the twenty-five or thirty days of sea voyage; but to undertake such a passage with cattle fresh from the grass does not seem to be at all feasible. To test the matter the Government, on its own account, proposes to pay the expenses of a trial shipment; and it is now making arrangements to this end. Of course it will require steam-ships, specially fitted up for the purpose, and with a capacity to carry a very large number each, in order to reduce the costs and expenses of shipment.

THE WOOL PRODUCT.

For various causes, which I have stated in special reports, the sheep industry of the Argentine Republic has not for several years been in so flourishing a condition as it has been wont to enjoy. One of the lamentable drawbacks to the business of growing wool, which is the great and most important business of the country, is the disgraceful condition of the flocks. So little care is taken of them, so little money is expended in protecting them from the weather, that it is now the exception to see a bunch of sheep which is not suffering from foot-rot or scab or both. In some portions of the "camp" it is no unusual thing for whole flocks to be afflicted with diseased feet, and sometimes so badly as to be scarcely able to drag themselves along on their knees. No effort is made to prevent or to cure this, as it does not directly interfere with the growth of the wool; but, as a matter of self-interest, the *estancieros* are generally solicitous to cure the scab, and the market is overrun with specifics for this purpose. But scab is a disease which is so readily propagated from flock to flock, feeding at different times over the same pasturage, that one careless sheep farmer has it in his power to spread the disease through a whole neighborhood. Until a law is passed which requires that scabby sheep shall be isolated, and killed if permitted to run at large, there is not much hope for improvement in the condition of the Argentine flocks. The wool shipments for several years have shown

but little change in their figures. As a matter of reference, as well as comparison, I give below the exports since 1880:

Year.	Wool.		Sheep-skins.	
	Tons.	Value.	Tons.	Value.
1880.....	97,145	\$27,467,671	29,077	\$5,455,327
1881.....	103,876	31,446,495	32,539	4,639,437
1882.....	111,009	29,978,960	22,363	4,231,718
1883.....	118,403	29,600,918	26,664	5,095,896
1884.....	114,344	32,005,819	24,938	5,484,952
1885.....	128,393	35,950,111	31,536	6,267,377
1886.....	132,130	31,711,604	35,812	6,350,731
1887.....	109,164	32,749,315	30,447	6,698,408

It will be observed that with all the assurances which have been given out to the world in regard to the increase in the number of sheep in the Argentine Republic during the last few years, the wool clip is now about the same as it was eight years ago. And if it be true, as it is now officially computed, that there are one hundred millions of sheep in the country, it will be further seen, from the amount of the shipments, that the average yield is only a little more than 2 pounds to the sheep. And this is wool in the dirt, two-thirds of it being dirt and one-third of it being wool. In other words, taking the shipments of 1887 as the average annual product of the country, there are about 75,000,000 pounds of washed wool.

SHIPMENTS OF THE YEAR 1887

The following table shows the proportion of the clip of 1887, including sheep-skins, which was shipped to each country:

Country.	Wool unwashed.		Sheep-skins unwashed.	
	Quantity.	Value.	Quantity.	Value.
	<i>Kilograms.</i>		<i>Kilograms.</i>	
Germany.....	22,688,099	\$6,806,430	1,642,419	\$361,332
Belgium.....	23,192,667	6,937,800	2,877,044	632,950
Brazil.....	172,352	51,685	911	200
Chili.....	288	86	30	7
Spain.....	11,463	3,439	10,086	2,204
United States.....	4,000,633	1,200,190	24,924	5,483
France.....	51,276,586	15,382,976	19,221,175	4,228,659
Great Britain.....			2,709,263	596,039
Italy.....	1,971,117	591,333	2,578,041	567,169
Uruguay.....	369,826	80,948	510,785	112,272
Destination not named.....	3,884,672	1,165,402	873,134	192,089
Total.....	109,464,383	32,749,315	30,447,716	6,698,408

The shipments to the United States were exclusively of the long carpet wools from Cordoba, it being the only class that it is possible to send to our market, under our tariff laws, at a profit. Our tariff, so far as the clothing and finer qualities are concerned, is prohibitive. While those from Australia can come in, those from the Argentine Republic, owing to the greater amount of grease and dirt which they contain, are quite excluded; our tariff laws making no allowance or reduction whatever for such excess. I referred at length to this discrimination against the Argentine Republic, in favor of Great Britain, in my annual report of 1886. It appears that the amount of dirt and grease in the wools of the Argentine Republic reaches to more than 70 per cent., while the wools of Australia and New Zealand have only about 50 per cent. In other words, while the average yield of Argentine wools scoured is only 30 per cent., that of the other countries named is 50 per cent. "If" as I have heretofore remarked, "the mills of the United States did not use foreign clothing wools at all, this would make no difference. The discrimination would be of no practical significance. But they do use foreign wools, and just such classes of clothing wools as the Argentine Republic can furnish; and, owing to the more intimate trade relations which we are striving to cultivate with the latter country, we

should avoid even the appearance of favoring other nations to the prejudice of the Argentine Republic." The matter seems to be one which deserves the attention of our Government.

ARGENTINE TRANSIT TRADE.

The transit trade of the Argentine Republic for the year 1887 will be seen from the following table:

Country.	Ingress.	Egress.	Total transit.
Bolivia.....	6,449,725	172,521	6,622,246
Brazil.....	5,541	843,919	854,460
Chili.....		4,325	4,325
Paraguay.....	31,925	489,299	521,224
Uruguay.....	873,054	221,265	1,094,323
Total.....	7,360,245	1,736,333	9,096,578

The ingress from Bolivia consisted exclusively of silver metal and other minerals en route for England. In all other cases the ingress and egress were general merchandise.

THE CARRYING TRADE OF THE ARGENTINE REPUBLIC.

The carrying trade of the Argentine Republic with foreign nations for 1887 has been compiled by me from the returns published by the National Statistical Office, with the following result:

Class of vessels.	Arrivals.		Departures.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
Sailing.....	5,694	1,010,731	3,940	795,623	9,634	1,806,354
Steamers.....	6,607	3,460,870	5,584	2,928,346	12,191	6,389,216
Total in 1887.....	12,301	4,471,601	9,524	3,723,969	21,725	8,195,570
Total in 1886.....	11,015	3,515,290	8,243	3,153,389	19,258	6,668,679
Increase.....	1,286	956,311	1,281	570,580	2,467	1,426,891

PROGRESSIVE INCREASE OF FOREIGN NAVIGATION.

But the progressive increase which has taken place in the foreign navigation of the Argentine Republic will be better understood by a glance at the totals of arrivals and departures of vessels during the last ten years. For this purpose I have compiled from official sources the following tables:

Arrivals of vessels for eight years.

Year.	Sailing vessels.		Steamers.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
1878.....	1,262	230,223	1,200	616,409	2,462	806,632
1879.....	1,531	311,008	1,854	744,054	3,385	1,055,062
1880.....	2,311	308,461	2,524	878,841	4,835	1,187,302
1881.....	3,412	413,618	2,542	905,802	5,954	1,318,420
1882.....	3,031	423,127	3,040	1,104,927	6,071	1,528,054
1883.....	3,445	517,070	3,626	1,437,018	7,071	1,954,088
1884.....	5,231	733,659	5,747	2,278,704	10,978	3,012,363
1885.....	4,908	771,583	6,671	2,829,726	11,579	3,601,309
1886.....	4,727	764,238	6,288	2,751,052	11,015	3,515,290
1887.....	5,694	1,010,731	6,607	3,460,870	12,301	4,471,601

Departures of vessels for eight years.

Year.	Sailing vessels.		Steamers.		Totals.	
	No.	Tons.	No.	Tons.	No.	Tons.
1878	821	256,469	390	410,120	1,211	666,589
1879	826	273,686	1,689	703,748	2,515	977,434
1880	1,147	231,990	2,233	823,290	3,380	1,056,280
1881	2,500	323,120	2,300	843,116	4,800	1,166,236
1882	2,023	367,925	2,742	1,080,214	4,765	1,448,139
1883	2,263	424,124	3,172	1,318,201	5,435	1,742,325
1884	2,732	589,269	5,455	2,263,023	8,187	2,852,292
1885	2,441	600,858	6,549	2,748,803	8,990	3,349,661
1886	2,697	590,941	5,546	3,562,448	8,243	3,153,389
1887	3,940	795,623	5,584	2,928,346	9,524	3,723,969

The rapid increase of steam navigation over sailing vessels, which the above tables exhibit, in the foreign carrying trade of the Argentine Republic can not but attract attention. In 1878 the steam tonnage stood for 68 per cent. of the whole amount, while that of sailing vessels stood for 32 per cent. Now, the steam tonnage stands for about 80 per cent. of the whole amount, and that of sailing vessels for 20 per cent.

The following table shows the arrivals and departures of sailing vessels and steamers for each port in the Republic as compiled from the returns published by the national statistical office:

Arrivals and departures of sailing vessels and steamers for each port.

Ports.	Arrivals.				Departures.			
	Sailing vessels.		Steamers.		Sailing vessels.		Steamers.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.
Bahia Blanca	12	5,532	18	7,527
Buenos Ayres	3,358	704,036	1,542	1,278,668	1,825	898,744	1,769	1,226,671
Compana	65	16,770	50	14,566
Concepcion	43	1,338	398	136,469	24	968	272	99,099
Colon	109	3,941	503	186,794	79	5,968	506	185,737
Concordia	245	12,596	653	203,981	216	15,367	671	229,493

INTERNATIONAL RIVER NAVIGATION.

As I have explained in a former report, it must not be supposed that the large amount of tonnage represented in the foregoing tables was entirely ocean commerce. From the last preceding table, giving the arrivals and departures according to flag, it will be seen that a very large proportion of what is classified as Argentine foreign shipping comes under the Argentine, Uruguayan, Paraguayan, and Brazilian flags. None of the tonnage thus represented is engaged in ocean navigation, but is employed in what is called the coasting trade along the La Plata, Paraná, Uruguay, and Paraguay Rivers, between the various ports of the Argentine Republic and those of the opposite shores, belonging to Uruguay, Paraguay, and the interior provinces of Brazil. To get at the exact figures

of the actual ocean navigation of the Argentine Republic it is necessary to deduct all this international river commerce from the total figures and only put down the balance as ocean commerce, as follows:

Ocean navigation.

Arrivals.	Sailing vessels.		Steamers.	
	No.	Tons.	No.	Tons.
International river trade.....	4, 159	288, 602	3, 210	903, 918
In ocean trade.....	1, 535	722, 129	3, 397	2, 556, 952
Total	5, 694	1, 010, 731	6, 607	3, 460, 870

The following table separates the departures respectively:

Departures.	Sailing vessels.		Steamers.	
	No.	Tons.	No.	Tons.
International river trade.....	2, 638	179, 284	2, 841	800, 534
In ocean trade.....	1, 252	626, 399	2, 743	2, 127, 812
Total	3, 940	795, 623	5, 584	2, 928, 346

By thus separating the international river navigation from that of the interocean it will be seen that the figures of the latter are considerably less than would be inferred from a casual glance at the official returns. The average size of the sailing vessels engaged in the international river trade was about 65 tons, while the average size of those engaged in the ocean trade was 500 tons. The average size of the steamers engaged in the international river trade was 275 tons, while the average size of those engaged in the ocean trade was 750 tons.

NO AMERICAN STEAMERS HERE.

It will once more be observed that during the year 1887, as has been the case in all the previous years, the flag of the United States does not figure in the tables of arrivals and departures of steamers. No merchant steamer bearing the ensign of our country ever appears in Argentine waters. The official returns inform us that during the year twelve steamers sailed from this country for the United States, and that seven steamers from the United States arrived here. The latter were not regularly engaged in the trade, but were "ocean tramps" chartered to bring cargoes of kerosene to the river Plate; while the departures were cargo steamers belonging to the Lamport & Holt Line, which for several years have once a month made regular voyages to New York. None of these, however, ever return direct, but cross over to Liverpool, whence they make their return to Buenos Ayres. Thus they are of no possible assistance to American shippers seeking a market for their merchandise in the river Plate.

SAILING VESSELS FROM THE UNITED STATES.

The number of sailing vessel which arrived here from the United States during 1887 was 316, with a total tonnage of 198,671 tons. Of these only 74, with a tonnage 42,509 tons, carried the United States flag, while 242 vessels, with a tonnage of 156,162 tons, belonged to other nationalities. In other words, three-fourths of the sailing vessels which brought cargoes from the United States during 1887 were under foreign flags. The reason for this, as I have time and again explained, is not because we have no vessels suitable for the Argentine trade. On the contrary, our merchant ships, in build, staunchness, and speed, are far superior to those which have obtained the control of the carrying trade between the Argentine Republic and the United States. But our merchants and ship-brokers will not charter them at fair rates, when they can obtain cheaper and for lump sums the miserable old hulks of Norway and Italy. Of course, a very large percentage of the cargoes, when delivered here, are found to have been damaged in the transit; but of what importance is this to the charterers, so long as the United States underwriters persist in giving these unseaworthy vessels a class, and then cheerfully pay all the damages

for cargoes delivered in an unmerchantable condition. I repeat what I have heretofore said, that "if our underwriters were a little less anxious for all the business that offered, and would make use of a little more judgment in these cases, by establishing rates, which discriminated against unseaworthy bottoms, a stop would be put to this phase of our carrying trade," and first-class American ships would once more have a chance.

FOREIGN COMMERCE OF THE ARGENTINE REPUBLIC.

The imports of the year 1887 exceed those of 1886 by \$21,943,380. The exports of 1887 exceed those of 1886 by \$14,386,979. The imports of 1887 are greater than the exports by \$32,930,305. The following is a comparison of the foreign commerce of the last two years:

Commerces.	1886.	1887.	Increase.
Imports.....	\$95,408,745	\$117,352,125	\$21,943,380
Exports.....	69,884,841	84,421,820	14,536,979
Total.....	165,243,586	201,773,945	36,530,359

From the returns published by the national statistical office I am enabled to compile the following table showing the imports and exports of each custom-house in the country.

Imports and exports of each custom-house.

Custom-house.	Imports.	Exports.	Total.
Ajo.....	\$2,806	\$87,854	\$90,660
Alvera.....	8,279	6,957	14,854
Baradero.....	31,009	108,786	139,794
Bahía Blanca.....	179,175	1,119,757	1,298,932
Bella Vista.....	115,216	38,235	153,451
Buenos Ayres.....	93,819,121	53,124,504	146,443,625
Compana.....	611,026	1,200,339	1,811,365
Colon.....	76,100	521,953	598,053
Concepcion.....	353,973	196,127	550,100
Concordia.....	768,999	2,103,725	2,872,724
Corrientes.....	238,853	16,257	255,100
Chupuk.....	108,159	108,159

Empedrado.....	12,625	97,200	109,825
Esquina.....	49,549	25,895	75,444
Formosa.....	13,320	13,320
Goya.....	92,860	93,163	186,023
Galeguay.....	131,207	582,432	713,639
Galeguay chd.....	244,463	979,620	1,224,083
Helvecia.....	64,566	64,566
Jujuy.....	319,612	75,246	394,858
La Plata.....	67,274	144,410	211,684
Mendoza.....	1,127,913	71,794	1,199,706
Monte Caseros.....	42,803	468,168	510,971
Paraná.....	63,540	110,414	173,954
Paso de los Libres.....	650,047	47,147	697,194
Patagones.....	28,362	2,370	30,732
Rosario.....	5,044	5,044
Salta.....	16,172,687	13,582,339	29,755,026
Santa Fé.....	183,323	109,019	292,342
San Germón.....	1,549,510	2,420,533	3,970,043
San Juan.....	12,672	12,672
San Lorenzo.....	5,890	571,850	577,740
San Nicolas.....	1,297,819	1,297,819
San Pedro.....	398,953	2,934,175	3,333,128
Santo Tomé.....	2,598	806,948	809,546
Trinchera.....	9,672	13,285	22,957
Victoria.....	3,433	307,905	311,338
Zarazá.....	34,785	34,785
Total.....	117,352,125	84,421,820	201,773,945

From this table it will be seen that the great bulk of the foreign commerce of the Argentine Republic continues to flow in even increased proportions through the port of Buenos Ayres, the port of Rosario following next with an amount greater than that of all the remaining ports put together.

MOVEMENTS OF ARGENTINE TRADE ACCORDING TO NATIONALITY.

The foreign commerce of the Argentine Republic for 1887 was distributed among the different countries of the world as follows:

Countries.	Imports.	Exports.	Total.
Southern Africa.....		\$11,851	\$11,851
Germany.....	\$12,108,456	9,835,754	21,944,210
West Indies.....	5,942	783,296	789,238
Belgium.....	10,947,955	12,111,531	23,059,486
Bolivia.....	67,966	191,290	259,256
Brazil.....	2,517,943	1,841,112	4,359,055
Canada.....	71,142		71,142
Chili.....	16,195	1,150,576	1,266,771
Spain.....	5,005,099	1,321,203	6,326,302
United States.....	11,004,553	5,938,808	16,943,361
France.....	22,743,550	24,871,354	47,614,904
Italy.....	7,037,741	8,107,113	15,144,854
Holland.....	432,128	13,250	445,378
Paraguay.....	1,307,923	423,795	1,731,718
Portugal.....	61,788	14,517	76,305
Great Britain.....	34,779,219	17,085,001	51,864,220
Sweden.....	30,499		30,499
Uruguay.....	6,507,934	2,350,005	8,857,939
All other countries.....	2,712,667	3,361,364	6,074,031
Total.....	117,352,125	81,421,820	201,773,945

COMPARISONS BETWEEN 1886 AND 1887.

Comparing the trade returns of the Argentine Republic of 1887 with those of 1886 we find that the imports have increased from the following countries, to wit:

IMPORTS.

Country.	Increase.	Country.	Increase.
Germany.....	\$2,063,581	Italy.....	\$2,390,804
Belgium.....	3,226,038	Portugal.....	7,835
Brazil.....	208,979	Great Britain.....	1,846,559
Spain.....	1,288,104	Sweden.....	30,499
United States.....	3,331,269	Uruguay.....	569,884
France.....	5,741,512		

And from the following countries the imports have diminished:

Country.	Decrease.	Country.	Decrease.
West Indies.....	\$14,161	Holland.....	\$348,119
Bolivia.....	261,209	Paraguay.....	105,817
Canada.....	723,648	Other countries not named.....	436,628
Chili.....	52,508		

EXPORTS.

The exports of the Argentine Republic for 1887, compared with those of 1886, have increased to the following countries:

Country.	Increase.	Country.	Increase.
South Africa.....	\$5,080	France.....	\$2,529,171
Germany.....	3,884,846	Italy.....	630,675
Belgium.....	1,186,794	Holland.....	13,250
Bolivia.....	10,298	Paraguay.....	4,541
Spain.....	154,756	Great Britain.....	7,913,152
United States.....	2,358,402	Other countries not named.....	160,149

And during the same period they have decreased from the following countries:

Countries.	Decrease.	Countries.	Decrease.
West Indies.....	\$349,444	Portugal.....	\$308,171
Brazil.....	102,101	Sweden.....	31,926
Chili.....	1,168,274	Uruguay.....	407,611

TOTAL TRADE.

The total trade, including imports and exports for 1887, compared with that of 1886, has increased from the following countries:

Country.	Increase.	Country.	Increase.
South Africa.....	\$5,080	United States.....	\$5,689,671
Germany.....	6,948,427	France.....	8,270,783
Belgium.....	4,312,932	Italy.....	3,021,179
Brazil.....	106,888	Great Britain.....	9,319,710
Spain.....	1,442,860	Uruguay.....	160,693

And the following countries show a decrease in the total amount of their trade with the Argentine Republic for 1887, compared with the previous year:

Country.	Decrease.	Country.	Decrease.
West Indies.....	\$365,616	Paraguay.....	\$101,276
Bolivia.....	260,911	Portugal.....	296,292
Canada.....	723,648	Sweden.....	1,427
Chili.....	1,220,777	Other countries not named.....	8,296,479
Holland.....	834,869		

From the figures presented in the above tables of imports and exports, it appears that in the amount of imports Great Britain by a great odds still continues at the head of the category, while France comes second, followed at a respectful distance by Germany, the United States, and Belgium, in their order.

In exports, France continues to occupy the first place, followed in their order by Great Britain, Germany, and the United States.

In total trade, Great Britain remains in the lead, with France a good second, followed by Belgium third, Germany fourth, and the United States fifth. The actual percentage is as follows: Great Britain, 25.70; France, 23.60; Belgium, 11.42; Germany, 10.87; United States, 8.39; Italy, 5.02; Uruguay, 4.39; various, 10.61; total, 100.

DETAILS OF THE FOREIGN COMMERCE.

From the returns made to the Argentine national statistical office I have compiled the following table, which gives the amount and value of each article of import and export of the Argentine Republic for the year 1887:

IMPORTS.

Articles.	Quantity.	Official value.
Animals:		
Asses.....	number... 20	\$650
Horses.....	1,506	102,744
Hogs.....	do..... 812	2,470
Sheep.....	do..... 46,316	129,020
Mules.....	do..... 1,220	18,300
Horned cattle.....	do..... 942	156,393
Total		409,577

IMPORTS—Continued.

Articles.	Quantity.	Official value.
Groceries and comestibles:		
Olive oil.....kilograms...	5,646,026	\$1,976,109
Olives.....do.....	479,919	76,445

IMPORTS AND EXPORTS OF GOLD.

In the foregoing details of the foreign commerce no account is taken of the imports and exports of coined money. The imports of gold in 1887 were \$9,748,596, while the exports were \$9,877,185. So that, if we include these items, as does the minister of finance in his report, the total imports in 1887 will amount to \$127,100,721, while the total exports will reach to \$94,299,005; total commerce, \$221,399,726. Comparing the imports and exports of coined money for the last two years, the minister gives the following result:

Movements of coined money.	1886.	1887.	Total.
Imports	\$20,635,662	\$9,748,596	\$30,384,258
Exports	8,368,018	9,877,185	18,245,203
Excess	12,267,644	128,589	12,139,055

Thus, the minister figures that there are now \$12,139,055 more coined money in the country than there was in 1886. These importations of gold, it will be borne in mind, are the results of the late loans made by the Government in England, for the purposes of internal improvements, banks, etc.

But, according to the general laws of trade, it can not be very long before what remains here of these imports of gold will find its way back to meet the balances which go on increasing against the country.

EXCESS OF IMPORTS.

Leaving out of the account, however, this influx of gold into the country, the importations of merchandise for 1887 are much greater than those of any year since the organization of the Government. In every department of trade there has been an increase. The following table, which I have compiled from the custom-house returns, gives a comparison of the imports of 1887 with those of the previous year:

Comparison between 1886 and 1887.

Classes of imports.	1886.	1887.	Increase.
Animals on the hoof.....	\$157,072	\$409,577	\$252,505
Alimentary substances	12,865,787	15,924,843	3,059,056
Liquors	10,691,123	15,488,437	4,797,314
Tobaccoes	1,581,380	1,639,383	58,003
Woven goods	21,994,618	22,280,090	285,472
Ready-made clothing and confections	3,678,566	7,433,951	3,755,385
Wood and its applications.....	6,878,167	8,741,676	1,863,509
Paper	2,409,618	3,111,876	621,258
Leather, etc.....	1,328,520	1,753,183	424,663
Iron and ironware.....	12,920,715	14,359,366	1,438,651
Building materials	5,102,777	5,639,903	537,126
Materials for other purposes.....	2,683,267	3,015,263	331,996
Glass and crockery ware	4,053,465	4,727,861	674,396
Combustibles, coal and light.....	5,471,661	5,710,163	238,502
Various articles.....	2,666,236	3,508,472	842,236
Chemicals, drugs, etc.....	3,697,015	4,188,998	491,983
Ships' stores, etc.....	29,709	29,083	626

As I have said on a former occasion, it is very evident that "the imports are out of all proportion to a healthy condition of trade." The country is persistently buying more than it sells, and consuming more than it produces. The difference must be met by sending abroad the gold that is in the Republic, draining it, as it were, of the very means which the Government seeks by loans to provide for its industrial development. When the power of the Government to borrow is exhausted, the condition of the country will be unfortunate unless meanwhile something is done to stimulate production and thus increase the exports.

ANALYSIS OF THE EXPORT TRADE.

That much is being done in this direction, however, is evident from the last trade returns. As has been seen from the tables already given, the exports of 1887 are \$14,586,979 greater than those of 1886, an increase of more than 20 per cent. on the previous year. The principal increase was in the following products:

Articles.	Increase in quantity.	Increase in value.
Ox and cow hides, dry.....number...	709,898	\$2,202,458
Linseed.....kilograms...	43,493,775	2,233,988
Wheat.....do.....	200,001,512	8,004,269
Frozen sheep.....do.....	4,416,264	581,646

In the following articles, however, there was a decrease:

Articles.	Decrease in quantity.	Decrease in value.
Ox and cow hides, salted.....number...	115,975	\$508,564
Jerked beef.....kilograms...	17,626,827	1,762,682
Grease and tallow.....do.....	5,673,008	981,006

In wool the quantity exported during 1887 was 22,986,113 kilograms less than in 1886; but in 1887 its official value was greater, and hence it shows an increase of \$2,233,988 in value.

The relative value of the different classes of exports of 1887, compared with those of 1886 was as follows:

Articles.	1886.	1887.	Difference.
Products of the cattle industry.....	\$52,908,847	\$55,282,102	2,373,255 more.
Products of agriculture.....	8,241,836	21,257,320	12,915,484 do.
Industrial products.....	6,600,257	4,239,984	2,360,273 less.
Timber exported.....	328,823	277,944	50,879 do.
Minerals.....	158,029	186,150	28,121 more.
Products of wild animals.....	351,021	606,788	255,767 do.
Various exports.....	1,514,538	1,802,082	287,544 do.

The wonderful increase in the exports of agricultural products, as exhibited in the above table, is all the more gratifying, as only a few years ago it was generally proclaimed that it was impossible for the Argentine Republic ever to be an agricultural or grain-producing country. As will be seen, the principal factors which now enter into the export trade are the pastoral industry and agriculture, the latter of which is receiving a very remarkable development and is promising most satisfactory results for the future. Of course, for years to come, the exports of wool and sheep-skins, and the products of the cattle-killing establishments must continue to be the great items of export, but the production of cereals is getting to be a most important industry; the crops now not only supplying the demands of the home market, which heretofore were supplied from abroad, but the surplus now, every year, adds largely to the aggregate of exports. With the annual increase of an agricultural immigration from Europe it will not be very long before the products of the farm will contest for the first place with those of the pastoral industry. Until there is a very decided increase in the exports, or a decrease in the imports, the commerce of the country, however, can not be said to be in a prosperous or safe condition.

ARGENTINE COMMERCE WITH EACH COUNTRY.

The tendency of the Argentine people to run into extravagances is seen by a glance at the commerce of the Argentine Republic with the countries with which it principally trades. Each year the bills for imports show an increase in lines of goods which do not enter into or contribute to the development of the resources of the country, but simply gratify the luxurious tastes of the people.

RETURNS OF TRADE WITH THE DIFFERENT COUNTRIES.

As a matter which must needs be of considerable interest to our own merchants and manufacturers, seeking new markets for their surplus, I proceed to examine the trade returns of the more important countries with which the Argentine Republic has commercial relations, or at least those which more directly come into competition with the United States.

ARGENTINE TRADE WITH GERMANY.

The recent development of the trade with Germany is attracting general attention. Its extent will appear from the following table:

Year.	Imports.	Exports.	Total.
1880.....	\$2,385,152	\$2,541,828	\$4,926,980
1881.....	3,527,570	4,004,897	7,532,467
1882.....	4,764,622	4,808,951	9,573,574
1883.....	7,028,051	4,823,827	11,851,878
1884.....	8,768,930	6,813,713	15,582,643
1885.....	7,262,999	8,512,443	15,775,442
1886.....	8,044,876	6,950,908	14,995,784
1887.....	12,108,456	9,835,754	21,944,210

This increase is in great part, if not entirely, owing to the trade methods which Germany some time since adopted with reference to the Argentine Republic, being indeed exactly those which years ago I suggested for the adoption of our country, to wit: (1) Quick and regular steam communication between the two countries; (2) the establishment of branch houses here interested in the sale of German manufactures, and (3) the opening of a German-Argentine bank in this city to facilitate exchanges, etc.

The lines of goods imported from Germany during 1887 were as follows:

Articles.	Value.	Articles.	Value.
Comestibles and groceries.....	\$1,157,304	Manufactures of iron.....	\$1,232,630
Liquors.....	698,585	Jewelry, etc.....	350,563
Tobacco.....	157,834	Crockery and glass ware.....	628,230
Woven goods.....	4,530,674	Other imports.....	1,379,888
Drugs and chemicals.....	604,262		
Wooden ware, furniture, etc.....	687,247	Total imports.....	12,108,456
Paper.....	724,814		

Included in these imports are 16,725 sewing machines and 1,074 pianos.

The exports to Germany, which show an increase of nearly \$3,000,000, consisted of the following articles:

Articles.	Value.	Articles.	Value.
Goat and sheep skins.....	\$597,389	Linseed.....	\$98,676
Ox hides (dry and salted).....	824,448	Wheat (10,498,772 kilograms).....	419,880
Horse hides (dry and salted).....	597,384	Indian corn.....	132,766
Wool, unwashed.....	6,806,430	Flour.....	76,719
Nutria skins.....	153,986	All other articles.....	57,232
Jerked beef.....	40,864		
		Total.....	\$9,835,754

ARGENTINE TRADE WITH BELGIUM.

While the trade returns with Belgium show a gradual decrease in the volume of exports to that country, there has been a progressive increase in the amount of imports from there. These in 1880 amounted to only \$2,483,105; in 1887 they amounted to \$10,947,955. On the other hand the exports, which in 1880 reached to \$14,356,458,

amounted to only \$12,111,531 in 1887. The total volume of trade, however, which amounted to \$16,839,565 in 1880, has now reached to \$23,059,486. The following are the imports of 1887:

Articles.	Value.	Articles.	Value.
Groceries and comestibles	\$1,698,669	Boots and shoes	\$373,084
Liquors	474,356	Stone, glassware, etc	362,402
Woven goods, etc	1,952,007	All other articles	830,194
Paper	503,084		
Iron and iron goods	3,974,786	Total	10,947,965
Chemicals	188,373		

Among the imports were 13,198 tons of iron beams and joists amounting to \$527,928, articles which are here rapidly superseding the use of timber in house building. In the item of woven goods is included ready-made clothing, which amounted to \$482,971.

The table of exports to Belgium shows no new features. It comprises the following articles.

Articles.	Value.	Articles.	Value.
Hair	\$246,839	Indian corn (37,646,686 kilograms)...	\$552,932
Goat skins	632,950	Wheat (48,486,655 kilograms).....	1,739,466
Dry ox hides	428,745	Flour	19,606
Salted hides	1,084,008	All other exports	171,812
Unwashed wool	6,967,800		
Extract of meat and pepsin	98,551	Total exports	12,111,531
Linseed	185,342		

The shipments of wool, which in former years went almost entirely to Belgium, are each year growing less, France having in great part obtained the control of the clip. The exports of agricultural products, however, to Belgium shows a steady annual increase.

ARGENTINE TRADE WITH FRANCE.

The trade of the Argentine Republic with France shows a most wonderful progression, the amounts having almost doubled in the last ten years, while the imports have nearly trebled. I give the figures below:

Year.	Imports.	Exports.	Total.
1880	\$8,292,872	\$16,108,202	\$24,396,104
1881	10,279,798	16,664,408	26,944,196
1882	12,186,824	16,398,992	28,585,816
1883	15,418,997	21,041,495	36,460,492
1884	16,786,590	22,518,371	39,304,961
1885	14,545,198	24,164,829	38,710,024
1886	17,002,088	22,342,188	39,344,221
1887	22,743,550	24,871,364	47,614,904

The imports of 1887 consisted of the following lines of goods:

Articles.	Value.	Articles.	Value.
Groceries and comestibles	\$3,154,771	Paper, etc	\$470,781
Wines and other liquors	6,825,544	Ironware	1,058,012
Woven goods	3,172,902	Jewelry	1,463,085
Ready-made clothing	2,079,555	Other imports	3,998,298
Chemicals, etc	971,705		
Furniture	542,597	Total	22,743,550

The exports to France of late years have in great part consisted of wool and sheepskins. The quantity of wool shipped in 1887 was 51,276,586 kilograms, while that of sheep skins was 19,221,175 kilograms. The quantity of maize exported was 98,868 tons, while that of wheat was 17,197 tons. The value of the principal exports was as follows:

Articles.	Value.	Articles.	Value.
Goat and kid skins.....	\$499,217	Maize, or Indian corn.....	\$1,977,862
Sheep skins.....	4,228,659	Wheat.....	687,884
Dry hides.....	1,046,876	All other exports.....	631,540
Linseed.....	416,840	Total exports.....	24,871,354
Wool, unwashed.....	15,382,976		

ARGENTINE TRADE WITH GREAT BRITAIN.

If the trade with France shows a remarkable progression that with England presents a still more surprising increase. In the last eight years it has more than triplicated, since from \$17,272,192 in 1880 it has reached to \$51,864,220 in 1887. In 1880 the imports from Great Britain amounted to only \$12,103,460; in 1887 they were \$34,779,211; in 1880 the exports to Great Britain were \$5,168,732; in 1887 they were \$17,085,001. The imports from Great Britain were as follows:

Articles.	Value.	Articles.	Value.
Live-stock.....	\$200,160	Boots and shoes.....	\$304,548
Groceries and comestibles.....	1,297,330	Iron and iron utensils.....	10,098,224
Liquors.....	476,656	Jewelry, etc.....	515,717
Woven goods.....	12,606,481	Glass and crockery ware.....	860,515
Ready-made clothing.....	2,150,035	Stove coal.....	3,854,423
Chemicals and drugs.....	1,227,184	All other imports.....	762,620
Furniture.....	227,587	Total imports.....	34,779,219
Paper.....	328,890		

The exports to Great Britain comprised the following articles:

Articles.	Value.	Articles.	Value.
Sheep skins.....	\$596,089	Frozen mutton ..	\$338,702
Salted ox hides.....	1,081,090	Flour.....	28,769
Wool (unwashed).....	509,024	Grease and tallow.....	273,196
Linseed (62,974,984 kilograms).....	3,148,749	Precious woods.....	82,928
Indian corn (177,769,044 kilograms).....	3,555,882	Copper and silver ore.....	97,572
Wheat (145,947,643 kilograms).....	5,887,906	All other exports.....	390,867
Bones and bone ash.....	243,219	Total exports.....	17,085,001
Salt beef.....	401,558		

It will be seen from this table that the surplus agricultural products of the country are beginning to find a market in England in such quantities as to cause no inconsiderable increase in the amount of exports to that country.

ARGENTINE TRADE WITH OTHER COUNTRIES.

It is hardly necessary at the present time to give the details of the commerce of the Argentine Republic with other countries, as the figures are comparatively unimportant; and not only is there for the last year no very marked change in the amounts, but they do not enter into any such competition with the United States as to require any particular notice.

ARGENTINE TRADE WITH THE UNITED STATES.

In regard to the trade with the United States, as has already been seen, the returns show a very important increase not only in the bulk of the trade, but especially in the imports to the Argentine Republic. In the last eight years these have nearly quadrupled. The following are the returns since 1880:

United States trade for eight years.

Year.	Imports.	Exports.	Total.
1880.....	\$3,224,743	\$5,126,440	\$8,351,183
1881.....	4,268,110	4,083,714	8,351,824
1882.....	5,094,764	2,966,582	8,061,346
1883.....	4,983,054	3,510,574	8,493,628
1884.....	7,454,832	4,064,848	11,519,680
1885.....	7,006,719	3,563,841	12,570,560
1886.....	7,073,284	3,580,406	11,253,690
1887.....	11,004,583	5,988,806	16,993,381

It will be observed that this increase is almost exclusively in the imports, the exports to the United States being very little larger than they were eight years ago. The Argentine minister of finance, in commenting on the exports figures in his report, says: "This is all owing to the fiscal system which, in practice, absolutely excludes Argentine wools from that great market."

DETAILS OF THE TRADE WITH THE UNITED STATES.

The following are the returns of the Argentine national statistical office of the import and export trade of the United States with the Argentine Republic:

IMPORTS FROM THE UNITED STATES.

Articles.	Quantity.	Official value.

ANALYSIS OF OUR IMPORT TRADE.

Considering how unfortunately our import trade is handicapped in lacking all the facilities for a close and intimate intercommunication—without steamship lines, without banking advantages, without distinctive American business houses here—the returns for the last year are very satisfactory. The wonder is that the figures are so large. While it can not be said that the trade presents any new features, yet it shows a very considerable increase in its proportions; and, while the great bulk of our shipments to the River Plate still consists of crude articles and raw materials of prime necessity which can not be obtained in other markets, the returns show the beginnings of a trade in other lines of goods which promise better things for the future. The following table presents a comparison of the shipments here of leading articles for the last four years:

Articles.	1884.	1885.	1886.	1887.
Turpentine.....	\$34,430	\$25,152	\$48,938	\$110,546
Starch.....	49,448	45,438	41,071	42,879
Agricultural implements.....	136,530	611,002	455,450	580,891
Lamps and gas fixtures.....	66,159	86,596	69,404	70,508
Lumber.....	2,817,146	3,453,719	3,362,620	6,117,847
Furniture.....	92,517	129,792	280,246	248,398
Cotton goods.....	178,178	200,697	238,716	366,696
Hardware, etc.....	240,694	226,078	542,324	562,447
Lard.....	40,326	33,731	55,958	150,210
Kerosene.....	866,741	341,891	707,220	1,109,540
Railway machinery, etc.....	834,168	892,119	165,020	243,940
Drugs, chemicals, etc.....	62,355	82,224	342,658	369,118
Hempen and woolen goods.....	189,136	165,534	417,207	171,455
Tobacco, etc.....	208,420	98,542	77,856	100,708

It will be observed that the great increase in our imports has been in lumber and kerosene, two articles for which the Argentine Republic is entirely dependent upon the United States; but the steady growth of our trade in agricultural implements and machinery, cotton goods, hardware, and tools, and in railway and tramway cars and machinery is deserving of notice. The increase in these lines is entirely owing to the fact that we furnish far better or more serviceable articles than can be obtained in the markets of Europe; and, after trial, ours are forcing themselves upon the attention of this country in spite of the fact that, owing to superior finish and style, it may cost a little more to put them down here. Besides the increase in nearly all the above lines of goods, the returns show in many others the very healthy beginnings of a considerable trade, such as American beer, salt and canned fish, shooks or barrel staves, pianos, cotton duck, cooking-stoves, etc. But there are some articles which are a specialty with us that are entirely supplied from European markets. Among these may be mentioned cheese; out of more than 1,500 tons, valued at \$1,073,629, the United States last year furnished only 16 tons, valued at \$1,043. And the same with hams; out of 216 tons imported into the Argentine Republic last year only 13 tons came from the United States direct, nearly all the rest reaching here by way of England. We have quite lost our trade here in re-

finer sugars, the bulk of the imports now coming from France, Belgium, and Germany, which countries furnish a cheaper article made from beet-root. I have heretofore referred to the fact that if the cheap machinery-made furniture which comes from the United States shows no increase in amount, it is perhaps owing to the fact that several establishments have recently been started here equipped with all the necessary appliances for turning out the same class of work; and the same is the case with reference to starch.

AMERICAN SAMPLE-HOUSES.

The American sample-houses which have been lately established here are, I believe, doing very well, and exhibit no little energy and enterprise in pushing our manufactures. Indeed it is in part owing to their efforts to procure orders that our imports during the last year have footed up so well; but it is a fact that there is, I believe, at the present time but a single distinctive American importing house in the city of Buenos Ayres. There are a number of large and wealthy firms that are doing an immense business with the United States, and probably offer our goods on the best terms possible; but there are either English or German houses, whose most intimate connections are with Europe and which do business with the United States simply because it pays them well to do so.

EXPORTS TO THE UNITED STATES.

The exports of the Argentine Republic to the United States for the last year show an increase of \$2,358,402 over the figures of 1886, the returns for 1887 being a little larger than those of 1885. The following is a comparative table of exports of principal articles for the last five years:

Exports to the United States.

Articles.	1883.	1884.	1885.	1886.	1887.
Ox and cow hides.....	\$1,688,799	\$2,462,244	\$2,384,087	\$1,764,810	\$3,696,235
Wool.....	955,862	602,637	1,187,115	911,082	1,200,190
Linseed.....	30,515	96,051	251,247	46,958
Sheep-skins.....	1,156	272,957	32,625	234,128	5,493
Goat-skins.....	277,209	161,143	955,428	184,964	342,324

The linseed crop of the Argentine Republic, last year, amounting to 81,208 tons, nearly all went to Great Britain, not a pound of it finding a market in the United States. There was an unusual demand for Argentine hides in the United States, the shipments more than doubling the figures of the previous year. The wools which went to the United States, as heretofore, were the carpet wools of Cordoba, their point of shipment being Rosario, on the Paraná River. Since the removal by the Argentine Government of the export duty on wool there has been no difficulty in bringing these carpet wools within the lowest figures fixed by the American tariff. So long, however, as our tariff remains as it is, it will be impossible for the fine clothing wools of the Argentine Republic, handicapped as they are by about 70 per cent. of dirt and grease, to find a paying market in the United States. Of the 30,447 tons of sheep-skins shipped from the Argentine Republic in 1887, only 25 tons were sent to the United States; but of the 765 tons of goat-skins exported, 570 tons found a market in the United States.

THE INCREASE IN OUR TRADE.

The progressive increase which we have seen in the trade between the United States and the Argentine Republic is not the result of any of the modern methods usually adopted for the promotion of international commerce. On the contrary, whatever development there is has taken place in spite of the fact that we are entirely lacking in all the facilities now employed by the commercial nations of the world for the establishment and maintenance of trade. After many years of persistent discussion of the matter, we are still as far as ever from even the prospect of steam navigation with the Argentine Republic. Not a single regular merchant steamer arrived here from the United States during the past year, and our trade continues to be dependent upon the slow and uncertain medium of sailing vessels. We are still, also, without any proper banking facilities with the Argentine Republic. All our exchange and commercial business continues to be transacted through English banking-houses, thus increasing the charges

and complicating the settlement of balances. And worse than all, as I have already stated, we are quite without distinctive American importing houses in this city, and our entire trade being thus made to depend, not upon our ability to supply any given line of goods, but upon the question whether it will not pay the importing merchants better to buy an inferior article in Europe rather than a superior one in the United States.

STEAM-SHIP COMMUNICATION.

In my last annual report I spoke of the prospects of the establishment of a steam-ship line between New York and the River Plate, under a concession guarantied by the Argentine Congress to Mr. R. P. Houston, of England. Thus far nothing has been done under the concession, for the reason, as I am informed, that English capitalists are not willing to embark in an enterprise which, however satisfactory in itself, is encumbered with conditions which are considered unnecessarily onerous. From present appearances the problem of regular steam-ship communication between the United States and the Argentine Republic yet remains to be solved. Meanwhile there is not a maritime nation of Europe—hardly a country of South America even—that is not in the enjoyment of regular steamer navigation with the River Plate. The United States alone continues to be isolated and “behind the times,” and this, notwithstanding our anxiety to be on closer commercial terms with the republics of South America, and in spite of consular reports and South American commissions, which have so explicitly explained the methods by which our trade herewith can be firmly and satisfactorily established.

THE APPEARANCES AND PROSPECTS OF TRADE.

And what shall I say in regard to the prospects of trade, that constantly recurring subject about which I am so persistently asked to give my opinion by merchants at home? From my standpoint, which, after all, may not be the correct one, I can only reiterate what I have heretofore had occasion to remark, that the trade of the Argentine Republic in my opinion is not in what may be called a healthy or normal condition. It continues to suffer from the same unfortunate incidents which have accompanied it for the last five years. There is a continuance of the suspension of specie payments by the banks, and, while all imports must be paid for in gold, the business of the country is transacted on a depreciated currency basis. The premium on gold which, a year ago was 30 to 35 per cent., is now 40 to 45 per cent., and though the Government banks are just now making use of their gold reserve on the Bolsa to reduce the premium, yet with a newly authorized issue of sixty millions of inconvertible paper money, under the general banking law, it is not probable, however spasmodically a few millions of dollars may be thrown upon the market to lower the gold rate, that the premium for years to come is going to be any less than it is now. Even under this state of affairs there would not be any particular cause for alarm if the exports of the Argentine Republic were commensurate with the imports; but the balance of trade against the country is getting to be even more marked than ever before, thus greatly increasing the demand for gold, or what is the same thing, foreign exchange to pay the differences.

Heretofore these have been bridged over by the gold received from the frequent foreign loans which the national Government and some of the provinces have been making in Europe in behalf of all sorts of enterprises, from the building of railways to the starting of new banks under the national banking law. But there must be an end of borrowing some time; and the money centers of Europe are getting tired of these constant calls upon their purse strings, each one of which has a tendency to ultimately weaken the public credit of the country. Only the other day a cablegram announced that they were crying a halt to the placing of one more additional loan, on top of those already made, for the completion of the public sewerage works of this city. When the day of making no more new loans has arrived, and the proceeds of the last ones are exhausted, it is not difficult to foresee the result, unless meanwhile there shall be an end to the persistent overtrading which of late years has characterized the foreign commerce of the Argentine Republic. Some are already predicting that a commercial crisis will with difficulty be averted. Whether the approaching clouds of danger will end in a storm of this character or not, I would hardly venture to say; but it is certain that the commercial outlook is just now not at all reassuring; and the apprehensions of financial disaster and business collapse are looming up before the vision of some of the shrewdest business men of the country. I am gratified to report, however, that the national Government has at last quite effectually shut down on the old custom of granting concessions with guarantees to private parties, and has not only gone out of the business of building its own ways and other public works, but has even sold out some of those, for the building which the proceeds of many public loans were required. This course has somewhat

reassured, or at least quieted, the public mind, and placed the country in a better position abroad; but the overtrading still continues with a recklessness which forebodes only evil. That this may be fully seen, I give the following balance-sheet between imports and exports from 1883 to the end of 1887:

THE BALANCE OF TRADE.

Year.	Imports.	Exports.	Excess of imports.
1883.....	\$80,435,828	\$60,207,976	\$20,227,852
1884.....	90,055,144	68,029,886	22,025,258
1885.....	92,221,969	83,879,100	8,342,869
1886.....	95,408,745	69,884,841	25,523,904
1887.....	117,852,125	84,421,821	33,430,304
Total balance against the country in five years.....			119,102,238

There is certainly nothing very promising in this exhibit of figures, showing, as it does, how the gold which during the last five years has been received on account of loans abroad has in great part at once gone back to Europe in the shape of exchange to pay balances.

TRADE RETURNS FOR 1888.

The situation in this respect was so unsatisfactory that there was a hope that during the present year the custom-house returns would make a better showing for the country, by a reduction in imports and an increase in exports; but while I write I am just in receipt of an abstract of the custom-house statistics of the country for the nine months ending September 30, 1888, and I give the figures, as follows:

Country.	Imports.	Exports.	Country.	Imports.	Exports.
South Africa.....		\$5,883	Italy.....	\$5,219,886	\$1,846,849
Germany.....	\$11,717,315	9,930,754	Holland.....	256,576	
West Indies.....	2,169	726,028	Paraguay.....	1,220,845	288,066
Belgium.....	8,535,051	12,510,116	Portugal.....	68,027	97,099
Bolivia.....	157,445	214,314	Great Britain.....	88,496,911	12,368,020
Brazil.....	1,744,439	2,334,241	Uruguay.....	7,011,666	4,431,029
Chili.....	25,059	1,201,351	Other countries.....	3,129,091	1,954,621
Spain.....	2,833,309	2,166,054			
United States.....	7,022,025	5,069,907	Total.....	109,014,287	75,409,441
France.....	21,590,023	19,964,609			

Here, then, already, for the nine months of the present year we have an excess of imports over exports of \$33,604,846—an excess greater than the total excess of any previous year. Where and how all this is to end is left to conjecture. If these imports were for raw materials or for articles to be employed in reproductive industries the case would be different; but an examination of the tables of imports will show that in very great part they are entirely unproductive, such as liquors, fine clothing, and objects of luxury.

ARGENTINE TARIFF FOR 1889.

The Argentine Congress, recently adjourned, has made some changes in the customs law of the country for 1889. I give a translation of the new law below:

"Import duties.

"ARTICLE I. All foreign merchandise imported for consumption shall pay a duty of 25 per cent. on its valuation in deposit, except as follows:

"(1) Cigars of all kinds, which shall pay a duty of 60 per cent.;

"(2) Tobacco of all kinds, which shall pay a duty of 55 per cent.;

"(3) Fire-arms and munitions, powder, and perfumery, which shall pay a duty of 50 per cent.;

"(4) Ready-made clothing and confections, hats and caps, boots and shoes, dress ornaments, harness, carriages, furniture, matches other than wax, fire-crackers, Yerba maté, objects of art, preserved fruits, preserved vegetables, preserved meats and cheese, which shall pay a duty of 45 per cent.;

"(5) Paving stones, cordage, trotting horses, comestibles in general, except rice, farina, table salt, and whatever pays a specific duty, which shall pay a duty of 30 per cent.;

"(6) Galvanized iron of all kinds; white pine and spruce lumber, all kinds of writing and printing paper, which shall pay a duty of 10 per cent.;

"(7) Canvas and sack-cloth, gold and silver worked, sewing and embroidery silk, all instruments and utensils with handles, or ornamented with silver or gold, when these increase their value one-third part, presses and all materials for printing except types, lithographic presses, all agricultural and industrial machinery, common salt, steam-engines and detached pieces for repairing the same, thread and wire on spools for binding sheaves, sulphuric acid and sulphate of lime, tin and solder, which shall pay a duty of 5 per cent.;

"(8) Precious stones unset, which shall pay a duty of 2 per cent.;

"(9) The following specific duties, to wit:

Wheat, for 100 kilograms.....	\$1. 65
Starch, for each kilogram.....	.07
Coffee, for each kilogram.....	.08
Macaroni, for each kilogram.....	.07
Crackers and biscuit, for each kilogram.....	.09
Corn-meal and wheat flour, for each kilogram.....	.04
Tea of all kinds, for each kilogram.....	.80
Sugar, not refined, for each kilogram.....	.07
Common wine, in casks, for each liter.....	.25
Each bottle of wine of not more than one liter.....	.25
Each liter or bottle of beer or cider.....	.15
Alcohol in casks, not exceeding 30 degrees, per liter.....	.15
Brandy, gin, anise, kirsch, or other liquors, in casks, of 25 degrees.....	.20
Alcohol, bottled, of 25 degrees, per liter.....	.20
Brandy, gin, anise, kirsch, or other liquors, bottled, per liter.....	.25
Liqueurs and bitters, bottled, per liter.....	.25
Kerosene, per liter.....	.15
Sperm, stearine, or paraffine candles, per kilogram.....	.12
Stearine, per kilogram.....	.12
Playing cards, per gross.....	10. 00
Wax matches, per kilogram.....	.50
Straw paper for bags or for furring, paper bags, and colored paper, per kilogram.....	.12

"Articles of weight which have two or more coverings shall pay the specific duty on the immediate coverings.

"ART. II. The following articles shall be imported free of duty, to wit: Original works of art, sculpture, or painting, books in general, vessels and machinery for vessels moved by steam or other agent, stove coal, white sand, plows, wire for fencing or telegraphs, wire for vineyards up to No. 3, breeding animals and cattle on the hoof, fish and dried fruit, furniture and tools of immigrants, gold and silver, coined, in grain, bars, or dust; plants, iron and steel materials for roadway of trams and railways, locomotives, car-wheels, iron pipes for gas or water which have at least a diameter of 75 millimeters, quicksilver, cask frames of more than 2 kilograms, special mining powder and drilling machines, and dynamite, church ornaments, etc., sulphur unmanufactured, books and stationery for provincial governments or educational boards, seeds for agriculture, casks of wood and iron for tunning, materials and cases for packing meats for export, machinery for congealing meats for export.

"ART. III. Every kind of product, produce, or manufacture of the country shall be free of export duty."

By a supplemental law there is a duty of 1 per cent. additional to the rates above specified on all articles of importation, and in the settlement of duties in the currency of the country a premium of 15 per cent. is added as the differences between gold and paper.

CUSTOMS OR VALUATION TARIFF.

The customs tariff for 1889, containing the official values fixed by the Government for all classes of imports that pay an ad valorem duty, is now passing through the press. So soon as it is issued I shall in a separate report forward a translation of all such portions of it as may be interesting to importers and merchants of the United States.

PAPERS RECEIVED AT THE CONSULATE.

I take this opportunity to mention that during the past year this consulate has been supplied gratuitously with a number of valuable papers of the United States, among which were the South American Export Journal, American Exporter, Scientific American, American Machinist, Paper World, El Comercio, El Progreso, Anthony's Photographic Bulletin, and the daily New York Herald. They have been placed at the disposal of merchants, shippers, and ship-masters here, and have been a source of great benefit to those directly interested in trade and commerce.

CONSULAR CORRESPONDENCE.

It seems necessary that some reference should be made to the constantly increasing number of letters of which this consulate is the recipient. Every mail that reaches here from the United States, whether direct or via England, brings its large quota. Not infrequently the number received by a single mail quite reaches to a hundred, and is scarcely ever less than twenty or thirty. A large proportion of these are on the same subject, asking for reports about the trade, commerce, industries, etc., of this country. The parties interested should understand that I am expressly forbidden by the Department to give the information requested. The Consular Regulations prescribe that "the consular publications should be the means of communicating consular reports to the public;" and consular officers "are prohibited from furnishing reports or articles upon trade or commerce in their districts to any publication or to private persons; that such reports must be communicated only to the Department." Under these circumstances, of course I can not respond to their requests; but, in a very large majority of cases, the subjects of their letters have already, time and again, been fully discussed by me in carefully prepared reports to the Department of State; and they would save themselves from disappointment by applying directly to that source of information for printed copies of such reports.

Another large portion of these letters ask as to the prospects for business openings, or chances for work, or opportunities for employment. While the consulate is not an agency for this sort of information, and is not in a condition to be thoroughly posted on these subjects, yet I reply to as many of such letters as I possibly can; but the number is so great and so accumulating, that, if my whole time were devoted to this class of correspondence, I would not be able to get through it. I may, however, say to this category of letter writers, that except in some few special cases the first prerequisite for obtaining business employments here is a knowledge of the Spanish language. It is the medium for all transactions and interchanges of thought, and it is absolutely money thrown away to venture here without such knowledge. And I may add that if any Americans, under this restriction, persist in coming down here in the hope of bettering their condition, they should bring money enough with them to get back home again. For in nine cases out of ten, as I know by actual experience, it will only require a short sojourn here, where labor is cheap and paid for in depreciated currency, to thoroughly impress them with the blessings they have left behind them.

THE AMERICAN "COLONY."

There seems to be an impression in the United States that there is a large American colony in this country composed of families permanently residing here, or located here indefinitely, for the purposes of trade and commerce. This is altogether a mistake. There are a few permanent American merchants here in Buenos Ayres, and a few more in Rosario, but of those who are engaged in the exporting or importing business with the United States the greater part may be said to be here only temporarily. There are not, perhaps, in the whole country a hundred Americans, all told, and these are so scattered that they can hardly be called a colony.

DEATH OF SAMUEL B. HALE, ESQ.

It is with great personal sorrow that I am called upon to record the death of the pioneer of American trade with the Argentine Republic. I refer to Samuel B. Hale, esq., the founder of the well-known house of Samuel B. Hale & Co., whose name for the last fourteen years has so often appeared in my consular reports, and whose high character and commercial standing have for the last half century been recognized throughout the mercantile world. Mr. Hale quietly breathed his last, at his beautiful residence in this city, on the 20th of September last, in the eighty-fifth year of his age. For several years, owing to increased infirmities, he had retired from active life, leaving the business of the great house which he had founded to be conducted by his son-in-law, John F. Pearson, esq., and the younger members of the firm; but, full of all human sympathies and kindness as he was, he never lost his interest in human affairs; and almost up to the last, surrounded by a large circle of warm personal friends of all nationalities, he continued to take pleasure in recounting the experiences of his busy life in the Argentine Republic, or in discussing the affairs of his native country, for which he constantly expressed his tender affection and in whose wonderful progress he always took the deepest interest. In his death one of the last remaining landmarks of the early days of Argentine trade and commerce has disappeared. No one shall ever know—he kept no account himself—of the numberless private charities which he constantly dispensed or of the hundreds of distressed Americans in this far-off country whom he relieved and sent back to their

friends. I am not able to state the value of the estate which Mr. Hale has left, but it is known to be very large, comprising not only large amounts which are employed in the business of the house, but a number of very extensive and valuable cattle and sheep estancias in the provinces of Buenos Ayres and Santa Fé, and the Republic of Paraguay. The house of Samuel B. Hale & Co., which is now principally engaged in business of a financial character, will continue on, as heretofore, without any change in the name or style by which it has been so long and favorably known.

REVENUES AND EXPENDITURES OF THE REPUBLIC.

The ordinary revenues of the Argentine Republic for the year 1887 amounted to \$51,-582,460, an increase of \$9,332,307 over the receipts of 1886, and an increase of \$5,560,-459 over the estimates. The following table gives a comparison of the sources of ordinary revenue for the last two years:

Sources of revenue.	1886.	1887.	Sources of revenue.	1886.	1887.
Imports.....	\$26,806,459	\$34,100,008	Timber-cutting permits.....	\$13,482	\$13,181
1 per cent. additional.....	888,882	1,113,883	Water rates.....	371,844	463,328
Exports.....	1,988,082	1,907,413	Judicial deposits.....	74,271	77,800
Warehousing.....	549,801	679,107	National railways.....	2,952,534	2,616,565
Stamped paper.....	2,003,265	2,820,912	National bank shares.....	1,209,002	1,883,804
Stamps.....	173,943	211,463	Imports on bank issues.....	623,587	742,073
Business licenses.....	832,891	858,705	Mole and post dues.....	310,239	456,913
National taxes.....	1,598,663	2,087,813	Mint.....	65,565
Post-office.....	751,446	856,141	Sundries.....	639,488	149,912
Telegraphs.....	248,330	407,306			
Light-houses.....	111,439	186,623			
Sanitary visits.....	38,144	47,386	Total.....	42,260,152	51,582,460

The revenue of 1887 is the largest ever realized in the history of the nation, showing an increase of 22 per cent. over that of the previous year. But to the above figures are to be added the following items of revenue:

Fifteen per cent. added to custom-house duties for payment in paper.....	\$5,565,848
Sales of national lands.....	822,867
Money returned into the treasury.....	148,962
Total.....	6,538,677
Ordinary revenue as above.....	51,582,460
Total revenue.....	58,121,137

IMPORT DUTIES.

The duties on imports, which are the great source of revenue, continue to expand with the increase of trade, the Argentine tariff, which is in great part ad valorem, being annually so adjusted as to give the amount of revenue required. These duties for the year 1887 show an increase of 27 per cent. on the figures of the year 1886, and the amount is more than double what it was five years ago. Within the last two years there has been an increased duty placed on wines, alcohol, and sugars, which to some extent may account for the increase, but on other articles there has been no great change in the rate, and the increased receipts from this source of revenue are mostly in consequence of the increase in the amount of importations. The following table gives a comparison of the duties collected on imports for the years 1886 and 1887 respectively:

Imports.	1886.		1887.	
	Value of imports.	Amount of duty.	Value of imports.	Amount of duty.
Merchandise subject to specific duty.....	\$19,097,617	\$3,589,695	\$22,942,369	\$11,818,679
Merchandise at 2 per cent. duty.....	806,479	13,971	169,847	4,262
Merchandise at 5 per cent. duty.....	4,629,445	332,565	5,145,904	860,776
Merchandise at 10 per cent. duty.....	7,004,533	596,964	7,294,564	680,981
Merchandise at 25 per cent. duty.....	47,813,539	12,653,895	56,560,725	18,821,521
Merchandise at 45 per cent. duty.....	6,488,085	2,457,689	9,893,986	3,177,996
Merchandise at 50 per cent. duty.....	965,477	478,167	1,485,664	704,591
Merchandise at 55 per cent. duty.....	1,245,297	685,459	1,145,008	637,361
Total.....	87,590,482	25,758,395	104,589,562	33,906,874

In these computations the 1 per cent. additional duty is not taken into the account. As illustrative of the rapidly increasing product of the duties from imports, I give the following figures for the last ten years:

Increase in duties from imports.

Year.	Duties on imports.	Year.	Duties on imports.
1878.....	\$12,083,041	1888.....	\$19,780,558
1879.....	12,844,738	1884.....	23,639,237
1880.....	12,065,796	1886.....	23,205,975
1881.....	14,783,655	1886.....	27,698,576
1882.....	16,787,798	1887.....	35,213,930

EXPORT DUTIES.

The export duties, which were 3 per cent. on hides and 4 per cent. on wools, etc., were abolished by law of Congress in October, 1887, to take effect from the 1st of January, 1888. This removal of export duties marks a new era in the economical history of the Argentine Republic, and will, it is believed, very materially assist in the development of the industries of the country. This duty was first imposed in 1864 as a supreme necessity to meet the expenses of the war in which the nation found itself involved, and it has since been retained to satisfy the requirements of the treasury in spite of the prescriptions of the constitution. The country is indebted to the persistent efforts of the National Industrial Club for its repeal, assisted by the enlightened approval of President Suarez Celman.

NATIONAL APPROPRIATIONS.

The budget or appropriations for the support of the Government for the year 1887, according to the report of the minister of finance, was, for ordinary expenses, \$47,066,887; for extraordinary expenses, \$21,955,778; total, \$69,002,665, as follows:

Branch of the service.	Ordinary.	Extraordinary	Total.
Department of the interior.....	\$11,045,184	\$16,093,255	\$27,138,419
Department of foreign relations.....	971,556	308,239	1,289,795
Department of finance.....	17,162,929	2,845,232	20,008,161
Department of justice, education, and worship.....	7,069,262	268,619	7,337,881
Department of war.....	8,321,879	948,327	9,270,206
Department of marine.....	2,505,797	882,106	3,387,903
Total.....	47,066,887	21,955,778	69,002,665

But of the ordinary appropriations there were, on the 31st of December, 1887, still unexpended a balance of \$3,803,256; and of the extraordinary appropriations a balance of \$10,057,422, or a total of \$13,860,678, the actual expenditures being \$55,141,988.

Of the appropriations for the department of the interior, \$4,482,997 were for the expenses of the Executive, of Congress, and of the territories; \$7,452,033 for the construction of railways and other public works; \$1,709,017 for post-office and telegraphic service; \$105,212 for the department of agriculture; surveys of the public lands \$166,383, etc.

Of the appropriations for the department of foreign relations, \$748,852 were for the expenses of foreign legations and office expenses; \$568,220 for immigration, etc.

Of the appropriations for the department of finance, \$444,993 were for office expenses, etc.; \$1,905,138 for expenses in the collection of the revenues; \$19,880.88 for the service of the national debt; \$1,271,677 for the municipality of the capital, etc.

Of the appropriations for the department of justice, worship, and public education, \$1,371,099 were for the administration of justice in the various courts; \$292,102 for the archbishop, bishops, and churches; \$4,606,183 for schools and school-houses; \$58,661 for the expenses of the department, etc.

Of the appropriations for the department of war, \$73,237 were for the expenses of the department; \$553,305 for cuartels, barracks, and hospitals; \$2,657,888 for rations, equipage, clothing, horses, etc.; \$152,374 for the military academy and the school for non-commissioned officers; \$977,394 for pensions, etc.

Of the appropriations for the navy department, \$965,579 were for the expenses of the fleet; \$1,058,715 for commissary and naval stores; \$377,214 for naval school, school-ships, etc.; \$181,691 for arsenals and fortifications on Martin Garcia Island; \$70,121 for maritime prefecture and the subprefectures.

A BALANCE IN THE TREASURY.

Deducting the total amount of the expenditures from the total receipts, the national account stands as follows:

Receipts of revenue	\$58,126,136
Total expenditures	56,141,968
Balance of revenue	2,984,148

The President, in his message, congratulates the nation on the fact that the revenues so handsomely exceed the disbursements; while the minister of finance, in referring to the condition of the treasury, says: "The testimony of these figures is very eloquent in favor of the vitality of the country and the prosperity of its industries and commerce, which in so short a time have not only recovered from the consequences of the crisis, but have acquired a movement which is far ahead of that of any former period, and which continues with an increasing impulse."

THE DEBT OF THE NATION.

The consolidated debt of the Argentine Republic on the 31st of December, 1887, according to the report of the bureau of statistics, was as follows:

Internal debt	\$51,243,800
Foreign debt	90,474,048
Floating debt	12,316,344
Total	154,034,192

But since the beginning of the present year the national congress made provision for what is called an internal issue of bonds to the amount of \$40,000,000 as the basis for the establishment of a system of national guaranteed banks; so that the national debt may now be stated as follows:

Total up to December 31, 1887	\$154,034,192
New issue for national banks	40,000,000
Fractional currency in circulation	6,000,000
Total Argentine public debt	200,034,192

When we consider that the total amount of the public debt of the Argentine Republic was only \$82,017,291 in 1881, it must be conceded that, in a state of profound peace, the government has made a very persistent use of its credit in increasing the figures to \$200,000,000 in the course of seven years. The facility with which the nation is thus increasing its public liabilities is attracting some attention abroad. The London Statist, commenting on this subject, says:

"We do not insinuate that as yet the Argentine Republic has incurred too much debt. No country in the world has made of late years more rapid progress. The people are enterprising and energetic; their system of government is liberal; their territory is vast and capable of maintaining an immense population, and immigrants are flocking in in large numbers. There is, then, a magnificent future before the republic, if it does not compromise that future by improvident borrowing; but if it goes on at the present rate of incurring debt, there is great danger that it will compromise its future very seriously indeed. It would, then, be a good thing for the republic if English investors showed themselves less ready to take up everything Argentine than they do at present, and it would certainly be a good thing for the investors themselves, as their securities would be safer."

It is evident, however, that the Argentine Government appreciates the necessity of keeping its credit up to the high standard which it has attained, and as I have already stated, it has decided that it will involve itself in foreign indebtedness for no more works of internal improvement which private capital is willing to undertake on its own account. Indeed, the Government, under the auspices of President Celman, is rapidly getting out of the business, and besides the public sewerage works of the city of Buenos Ayres, has also just sold out two of its most important railways to private parties, and it has several others that it is ready to dispose of. Last year the public debt required

no less than \$19,880,000, or over one-third of the public revenue, in gold, to meet the service of the interest. While the Government would have no trouble in taking care of even a larger amount of indebtedness, the questionable policy of its doing so is generally discussed in financial circles. At the same time President Celman, in his recent message to Congress, very clearly shows that "if the Government has an external debt of \$90,000,000, it has now a sufficient amount of money to pay it off if necessary." Indeed, Argentine securities were never quoted so high as at the present time. The 5 per cent. bonds issued in 1887 at 85½ cents stand to-day at 97 cents; and all its 6 per cent. bonds are quoted at \$1.04½.

THE VOLUME OF PAPER CURRENCY.

A matter, however, about which there is now a large amount of current criticism is the continuously increasing amount of paper money with which the country is supplied, and the high premium which gold coin commands on the exchange. The suspension of specie payments by the banks, which was sanctioned by Congress three years ago, has not only been permitted to continue, but no provision is now even thought of which looks towards resumption. Indeed, instead of contracting the volume of depreciated paper currency, with which all the exchanges in the country are conducted, the policy of the Government has been to still further increase it. During last year the amount in circulation was increased from \$73,000,000 to \$92,000,000. Since then, under the system of national banks, already referred to by me, an additional issue of \$40,000,000 is provided for, the notes being secured by a deposit of Government bonds. These notes are just now getting into circulation; so that the volume of paper currency is now about \$130,000,000; and yet with this increase the banks are compelled to curtail their discounts, so great is the demand for money for speculative purposes.

THE PROGRESS OF THE COUNTRY.

No better evidence, however, than this is needed to show the wonderful push and progress which have taken possession of the people all over the country. The spirit of improvement is abroad in every direction. President Celman, in his late message, well says:

"The principal feature of the situation of the country is the great national development of trade, industry, capital, and credit. To the increased value of land and city property, to the development of trade, to the increased production of the country, to the opening of new banks, must be added the increase of the revenue beyond all expectation; the facility with which the exchequer meets its obligations, and the very favorable state of the public credit at home and abroad. The vigorous impulse, with which this new country displays its strength in the increase of its trade, in the multiplication of its industries, in the influx of immigration, and in the fruits of hard work, is the most palpable proof of its sure and prosperous advance; and a pledge that this vast progress will contribute to cement both peace and liberty in the republic."

President Celman does not state the case too strongly. Nothing can now stop the progress of the country in the onward march of a great development. Political errors have been pointed out as the sure harbingers of impending ruin; financial blunders have been paraded as the precursors of general bankruptcy. But in spite of all this, in spite of critics and prophets of evil, the Argentine Republic continues to move forward with giant strides in the race of empire. Mistakes have been made in the administration of affairs, and perhaps other mistakes will yet be made. But the Government, with the lights which it has at hand to guide it, and with an earnest endeavor to do the best it can, is grandly struggling to raise the country to a higher level of national existence. The tide of immigration, which, in an annually increasing current, is setting towards the River Plate, shows the hope and confidence which the world has in its promise and destiny.

Capital, which is always sensitive and suspicious, now at last under the strong guarantees of peace and progress, finds here better opportunities for good investments than are offered anywhere else in the world; and it is coming by each steamer in amounts which seem almost incredible, thus opening up the waste places of the country, establishing new industries, and swelling the volume of general business. Already the same movement westward, which was the forerunner of the wonderful impulse which has made the United States what it is, is visible here in the Argentine Republic. A strong current of labor, of industry, of trade, of speculation, is moving from the water-ways into the interior. All the different provinces begin to feel the pulsations of quickened life; all of them are beginning to take part in the new departure. The lazy gaucho of other years is everywhere giving place to the earnest, hard-working wage-earner of Eu-

ropean nationality; the slow, ponderous old bullock-cart is being superseded by the locomotive with its long passenger and cargo trains, not in one direction only, not in one portion of the Republic only, but all over the interior. The railway track has already been extended to the farthest frontiers, north, south, and west; and all the intervening distances are now being united by these bands of iron. In the wake of these pioneers of highest civilization will follow a development which will be as marvelous as that which has characterized our own great Republic. Well may the other nations of Christendom watch, with sympathy and admiration, the promise of the Argentine Republic.

E. L. BAKER,
Consul.

UNITED STATES CONSULATE,

HENRY S. LASAR,
Consul.

UNITED STATES CONSULATE,
Port Stanley, F. I., May 21, 1889.

PERU.

THE CHIRA VALLEY.

PAITA.

REPORT BY CONSULAR AGENT COLUMBUS.

NATIVE PERUVIAN COTTON.

After five years of drought this province and State are naturally depressed in the way of commerce and all kinds of industry. The valley of "Chira" forms a favorable exception. The production of the valley consists principally of native Peruvian cotton.

GOSSYPIMUM HERBACEUM PERUVIANUM,

an article used very extensively in Europe for the manufacture of woolen goods, with which it mixes readily, on account of its rough, strong, and long fiber, is produced abundantly throughout the State, after the rainy seasons, which are periodical and occur generally every seven years, and is cultivated always along the banks of rivers on low lands irrigated by the overflow of streams. The plant is arborescent and perennial, and after fully developing continues producing cotton for five or six years in succession, provided there be some moisture in the ground, needing, however, very little of it on account of its deep rooting, thus reaching moisture at great depths. The system of cultivation of this plant is quite primitive, the seeds being planted by making holes in the ground with spades, without tilling or manuring the soil.

The plant becomes developed and begins to bear cotton in dry and sandy soil about six months after planting, and about nine months in rich and wet land, continuing to yield at short intervals for five or six years more in succession.

It is wonderful to behold the same plant in blossom, with pods, buds, and cotton, all at the same time, and giving a continual yield for the time above stated.

In certain seasons of the year, about every seven years, the rains are incessant here for about two months, both in the interior and on the coast, and water descends in such abundance as almost to inundate all the country.

Large torrents stream down the mountain side, the valley of the Chira is deluged, and flat lands within it are turned into morasses, and morasses into lakes; in a word, the low land becomes submerged and the accumulated mass of waters rush with great force down the central valley which forms their only outlet. The valley, however, is wide, and the descent very gradual. The extent of the valley through which the water flows is from 3 to 4 miles wide, and though it is nearly 200 miles in extent, the valley for the whole distance is almost level. There is only sufficient descent, especially for the last 60 miles, to determine a very gentle current to the sea.

Under these circumstances the great quantity of water proceeding from the mountains expands over the whole valley, and forms for a time an immense lake, extending in length across the whole breadth of the low land.

The rains generally cease in March, but it requires from thirty-five to fifty days for the water to disappear and leave the land dry. As soon as that is effected there springs up from the whole surface of the ground which has been thus submerged most luxuriant vegetation. After clearing the land the cotton is planted, and then there is no further labor required to preserve the plant, except an occasional cleaning out of weeds, and pruning about every six months or year.

This soil is wonderfully rich, and has been under cultivation by the aborigines from time immemorial, and its fertility is kept up unimpaired by the slime (*Limus terre*) which is abundantly deposited during inundation.

Cotton is collected, when the pods open, by women and children, who are paid in proportion to the quantity collected, the prevailing rates being 40 cents for every quintal (100 pounds). Cotton is taken from the fields to the ginning houses, where it is cleaned and made into bales of about 175 pounds each. We have five of such establishments in this province, one in Querecotillo, on the east side of the river, about 50 miles in the interior, owned by an Englishman; two in Sullana, a city of about 4,000 inhabitants, on this side or west side of river, about 45 miles from the coast, owned by natives, and two in La Huaca, a village of about 1,000 inhabitants, on this side of the river, 21 miles from Paita, on the railroad to Puera; both are owned by foreigners, an Englishman and

an Italian. The quantity exported annually averages from 65,000 to 70,000 bales, the gross value of which at current prices here is about \$2,000,000 in current money (Bolivian silver dollars, equal to 68 cents each). Seeds are now also exported for oil-making. Europe is the market for both products.

GOAT-SKINS AND HIDES.

Cotton constitutes the first article of export from Paita, and next in importance come goat-skins and hides, amounting in all to about \$200,000 Peruvian silver soles, equal to 68 cents each. Goat-skins are sent to the United States and hides to Europe. Want of direct communication by steamer to the United States and consequent high freight makes Europe a preferable market for hides on account of their great bulk and small value.

I send herewith statistics of exports to and imports from the United States, procured from the archives of the customs house here with a great deal of labor and difficulty.

R. M. COLUMBUS,
Consular Agent.

THOS. J. McLAIN, Jr.,
Consul.

UNITED STATES CONSULATE,
Nassau, April 24, 1889.

BARBADOES.

REPORT BY CONSUL DIMMICK.

The low prices which were ruling this market in 1887 have continued unimproved during the whole of 1888, and have had, as was natural to expect, a further baneful influence, not only upon the agricultural and financial situation of the island, but upon its trade and commerce generally, although the crop has been maintained at the same standard of extended production as last year. The depression remaining unabated has resulted in the ruin of several planters whose estates have had to be put in chancery notwithstanding the most strenuous efforts to tide over the crisis once more.

The United States have, however, continued to keep the control of the sugar market in this island, and a steady business can be henceforth anticipated in muscovado sugar between the United States and Barbadoes, as well as an ever-increasing current in the minor industries seeking a market, which have lately sprung up from the unremunerative prices offered for the staple produce of the land, and it will be noticed that the trade with the United States has, notwithstanding this regrettable state of affairs, gone on increasing on the former year's business, although not in the same proportion as that of 1887, as compared with 1886.

The following table gives the exports of sugar and molasses in detail for the years 1887 and 1888:

	Sugar.		Molasses.	
	1887.	1888.	1887.	1888.
United States.....	50,278½	52,728½	9,026	6,810
United Kingdom.....	12,511½	15,159½	50	899
British North American provinces	5,244½	4,748½	35,051	53,590
All other places	868½	374	112	43
Total.....	68,898	73,009½	44,239	60,352

Manufactures.—There has been an increase in the rum distilleries, which number 23 working ones in 1888 against 21 in 1887, and which manufactured 405,950 gallons, valued \$284,165.60.

The two manure works manufactured about 3,200 tons, valued \$182,400.

The sulphur-match factory manufactured about 18,000 gross, valued about \$10,000.

The divers lime-kilns did about the same business as last year.

There are oil wells in Scotland district which yielded 228 barrels crude oil in 1888, valued \$3,283.20.

Commerce.

1888.....	5,090,797.72	5,158,000.74
Increase, 1888.....	361,496.20	53,792.24

Trade with the United States.

Year.	Imports.	Exports.
1887.....	\$1,553,313.36	\$3,562,947.56
1888.....	1,910,412.54	2,660,337.68
Increase, 1888.....	357,099.18	97,390.12

Revenue of government.

Year.	Customs receipts.	From other sources.	Total.
1887.....	\$446,101.98	\$338,647.53	\$784,749.51
1888.....	481,378.46	299,644.74	781,023.20
Increase, 1888.....	35,276.48		
Decrease, 1888.....		39,002.79	3,726.31

Expenditure of government.—Total amount expended, 1887, \$742,132.05; 1888, \$718,606.92. Decrease, 1888, \$23,525.13.

Education.—Amount expended by the government for education during the year 1888, \$68,187.96.

Marriages, 928; baptisms, 7,725; deaths, 3,814.

Committed to prison.—Men, 1,341; women, 1,299; juveniles, 60; total, 2,700.

Emigration.—Emigration has been almost nominal this year, being limited to Santa Cruz and Guadeloupe, from four to five hundred emigrants only being sent to the above-named islands.

Financial.—American gold is legal tender, but at a discount of 1½ per cent. American silver is not legal tender, but is generally taken at a discount of 20 per cent. American greenbacks are not taken, except at the same discount of 20 per cent. by a few of the principal stores in exchange for goods, on account of the risk of sustaining losses in making remittance of them to the United States or of meeting with spurious notes. This mistrust of paper money is not singular or limited to the American greenback, even the Bank of England notes being refused unless indorsed by some firm or person of good financial standing in the community.

Sanitary.—The health of the island for the year has been good.

Average prices of principal articles of use or consumption in 1888.

Beef.....per pound...	\$0.20	Milk.....per gallon...	\$0.32

UNITED STATES CONSULATE,
Barbadoes, October 16, 1889.

E. A. DIMMICK,
Consul.

BERMUDA.

REPORT BY CONSUL ALLEN, OF HAMILTON.

In accordance with instructions contained in Consular Regulations, I have the honor to transmit herewith my annual statements of trade and navigation within this consular district, including also the port of St. George's, for the year ending December 31, 1887. I am unable to separate the commerce of the port of St. George's, as no separate record is available.

The imports from the United States for the year 1887 amount to a total value of \$850,-217.01, showing a decrease in value from the previous year of \$21,560.17, which is more than accounted for by the lower prices of many of the articles.

The trade with this colony is simply a trade of demand and supply for the inhabitants, and varies but little from year to year. The merchandise is imported chiefly by steamer, weekly or semi-monthly.

Commercial speculation and enterprise to any great extent is unknown here, and there is but little competition, as merchandise is largely sold on long credit, accounts being settled once in a year.

The crop of early vegetables this season was a small one, a blight having destroyed a portion of the onion crop, but as they were ready for shipment earlier than usual by nearly a month, and there being a scarcity in the market of the United States, they found a ready sale at unusually large prices, and gave a return to the colony of over \$400,000.

American visitors leave a large amount of money here during the winter months, which stimulates trade to some extent, and the condition of the colony seems to be improving from year to year.

CHAS. M. ALLEN, *Consul*.

HAMILTON, BERMUDA, June 30, 1888.

Imports at Bermuda for the year ending December 31, 1887.

March 31, 1888.....	317.50
June 30, 1888.....	432.07
September 30, 1888.....	
Total.....	*2,180.67

* Increase over the year ended September 30, 1887, of \$1,860.17.

WAGER REY,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Anguilla, September 30, 1888.

ANTIGUA.

REPORT BY CONSUL JACKSON FOR 1888.

On account of this consular district being confined almost entirely to the production of one article, *i. e.*, muscovado sugar, but little variety can be instituted in a report, and what had best be offered can be offered in a few words.

Owing to an increased output of sugar for the calendar year 1888—something over 1,000 hogsheads—and a better price obtained for the article, the exports of the island reached the sum of \$955,014.90, an increase of \$225,233.36 over the preceding year. This increase in turn stimulated imports and we have to note an advantage of \$60,305.96 in favor of 1888.

SUGAR EXPORT TO THE UNITED STATES.

Each year denotes a greater percentage of the crop exported to the United States. Fully seven-eighths of the crop of 1888 found a market there, while the prospect for 1889 denotes that the entire crop will take that channel.

The system of sugar packages is rapidly changing from hogsheads and tierces to that of shipping in bags, the latter having increased in three years from a few hundred to over forty thousand for the past year. These bags are manufactured in England and are sent out with the estate marks upon them; and while they are less convenient for handling purposes they are cheaper than hogsheads and find better stowage in a vessel's hold. They are intended to hold 250 pounds.

PROFITS IN SUGAR RAISING.

Only a few Antigua estates failed to make money last year, and for the best of reasons, *i. e.*, heavy debt, distant location, light rain-fall, and indifferent machinery. A good many brought a nice sum in compensation to the owners, who were made grateful after the severe depression of the past five years.

NAVIGATION.

The arrivals of United States vessels amounted to thirty-two, an increase of two only over the year preceding. The number of foreign steamers calling remains about the same from year to year; 147—all English—entered for the past year.

CHESTER E. JACKSON,
Consul.

UNITED STATES CONSULATE,
Antigua, April 8, 1889.

Imports at Antigua for the year ending December 31, 1888.

Description.	Quantity.	Value entered.	Amount of duties.	Countries whence imported.

RICHARD HANNAM,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Montserrat, September 30, 1888.

TRINIDAD.

REPORT BY CONSUL SAWYER.

SANITARY CONDITIONS.

The sanitary condition of this colony has been very unsatisfactory during the greater part of 1888.

In February the dysentery appeared in the vicinity of the reservoirs at "Maraval," the source of the river that supplies the capital with water.

Professor McCarthy, Government analyst, early made microscopical examinations and found the water to be much impregnated with decayed organic vegetable and animal matter, which during the following two months so injuriously affected the air that the disease appeared in many parts of the island. By the 1st of July it had assumed six distinct forms that were often attended with high fever that in many cases baffled medical skill and spared neither age, sex, nor condition.

Many people left the island, others used the precaution of filtering the water, and the Government and physicians made a free use of disinfectants. At that time a feeling of unusual solemnity prevailed throughout the island, as funeral processions were numerous and the bells of cathedrals, churches, and chapels often tolled out of respect to the departed. The dead are not permitted to remain unburied long here because of hasty decomposition in this climate.

Generally the burial takes place in about twelve hours after dissolution; but in cases of death by contagious disease the burial would take place immediately. A climate that so early decomposes the dead must also be very oppressive and enervating to the living.

There are long intervals between the epidemics; cholera in 1854, dysentery epidemic in 1869, small pox in 1871-'72, yellow fever in 1881, dysentery in 1888; but dysentery, remittent, and intermittent fevers are endemic in Trinidad, occasionally appearing during the intervals of epidemics, but in a mild form. Persons complaining with weakness in any one of the principal organs, as heart, liver, lungs, throat, etc., I notice, soon pass away, whereas had they lived in a cool climate farther from the equator they would most likely have lived many years.

The humidity of this atmosphere, combined with excessive heat, naturally intensifies the cause of all diseases that are produced in a tropical clime. The sudden change of 20° in the temperature in a few hours must be a trial to throat and lungs inclined to weakness, and the many exposures to draughts because of the peculiar construction of houses in a hot climate often bring on neuralgia; but with persons of a sound physical organism and who are prudent in eating and drinking Trinidad is tolerably healthy excepting during the epidemics.

THE JUDICATURE.

The principal officers of the Trinidad courts are:

Title.	Salary.	Date.	Appointment.
Chief-justice	£1,800	Jan. 29, 1886	By letters patent under warrant from the Crown.

UNITED STATES CONSULATE,
Trinidad, June 30, 1888.

MOSES H. SAWYER,
Consul.

DANISH WEST INDIES.

ST. THOMAS.

REPORT OF CONSUL TURNER FOR THE YEAR 1888.

I made to the Department last year quite an extensive report upon this island and the general decline in business, as evidenced by the greatly decreased revenues, superinduced as they are by the general increase in steam navigation, as shown in said report. It would be but a repetition of what I said then were I to go into particulars, but I shall give generally the condition of the island, as shown by recent official reports.

NAVIGATION.

The tonnage statistics for the year ended June 30, 1888, show an increase in both steam and sailing vessels touching at this port, the former being in a double ratio of increase to the latter.

There are five regular steam-ship lines whose vessels touch at this port, viz: Hamburg American Packet Company, which had two steamers outcoming from Hamburg and Havre each month and five homegoing during the same period, averaging 1,350 tons each; Royal Mail, which has two intercolonial steamers each month from the central station at Barbadoes, where the Transatlantic from Southampton touches, averaging 1,300 tons; the Compagnie Générale Transatlantique, with two steamers each month from Havre and Marseilles and the same number thither during the same period, averaging 2,000 tons; West India and Pacific from Liverpool, one steamer outcoming each month, with a tonnage of 1,600; and the United States and Brazil line, American, from New York, with two steamers each month, averaging 2,000 tons. All these lines touch at this port on account of its facilities as a coaling station.

ST. THOMAS MERELY A COALING STATION.

St. Thomas was formerly the center of trade for all the West Indies, merchants from the various other islands and even from the Pacific coast of South America coming here to purchase merchandise from business houses which acted as middle-men in supplying the West Indian trade. It is no longer such an entrepôt, for every place on each island which offers any sort of a port where steamers may anchor and which presents any inducements in the way of freight is in direct steam communication with European ports, and hence the merchants, whether doing a large or small business, throughout all these islands can purchase directly from the European manufacturer, whereas years ago it was all done with merchants at this place. One essential cause for the decline here is the fact that the West Indies are now closer commercially with the United States than formerly and all the business relations are direct, whereas in past years European capital invested in these islands tended naturally to draw the trade to Europe. Hence this port is now a coaling station, but no longer a point of distribution, as formerly. It is still a port of call where vessels in ballast from other points can secure charters for freight for the various West Indian ports for Europe and America.

The facilities in this line of business are not surpassed by any other place. In fact I might say that St. Thomas is better than any other place in the West Indies, since it is in telegraphic communication with all the islands and has a harbor which is safe, commodious, and healthful.

There is probably the same amount of tonnage passing through this port as in the most successful business years of the island's highest prosperity, but it is mostly steam tonnage which uses this as a coaling station and discharges but little cargo. The number and tonnage of Scandinavian vessels increase with each succeeding year. The charges imposed upon vessels entering and clearing in ballast are one cent per registered ton, light dues. Pilotage is not compulsory.

REVENUE DEFICIT.

Until within the past ten years this island has always paid a handsome revenue to the home Government, but there is now an annual deficit of \$40,000, which is due to military expenses and the civil list. There is no prospect in the distant future that the revenues will balance the expenditures, unless it be that the completion of either the Panama or Nicaragua canal may make this port become more important as a coaling station and possibly advance other interests, but this, however, has no solid basis for realization. The imports show a slight increase over the previous year.

IMPORT DUTY AND EXPORTS.

The import duty is 2 per cent. The exports do not exceed \$100,000, mostly bay rum, of which the greater part goes to the United States. There is no official statement of exports, so that the above amount is conjectural, but approximately correct.

PUBLIC HEALTH.

The health of the island is excellent. In recent years a canal has been cut through a strip of land connecting the body of the island with the hills forming the western shelter to the harbor near the town, so that a continual flow from the sea towards the town and through this canal takes off what would be otherwise stagnant water near the town.

The death rate during the quarter ended June 30, 1888, was about 29 to the thousand for the year, which has been the annual death rate for several years past.

MORTIMER A. TURNER,
Consul.

MORTIMER A. TURNER, *Consul*.

UNITED STATES CONSULATE,
St. Thomas, August 23, 1889.

SAN DOMINGO.

PUERTO PLATA AND SANCHEZ.

REPORT BY CONSUL SIMPSON.

PUERTO PLATA.

Exports.—As will be seen by the accompanying tables, the exports from this district during the past year show a decided decrease from those of 1887; not that the crops have been smaller, but the completion of a railroad from Sanchez, at the head of Samana Bay, to several of the interior towns has drawn off considerable produce that has heretofore found an outlet at this port.

Imports.—For the same reason the imports show a falling off, and, although no statistics are at hand to corroborate it, I believe those at Sanchez must have increased correspondingly.

Year.	Imports.	Duties.	Exports.	Duties.
1887	\$741,406.28	\$503,355.88	\$911,013.36	\$148,010.49
1888	653,571.79	418,956.66	771,247.59	92,399.35
Decrease	87,834.49	84,399.22	139,765.77	55,641.14

Total value of exports to the United States for—

1887	\$155,122.04
1888	109,091.75
Decrease	46,030.29

Navigation.—The tonnage of vessels entering and clearing shows an increase of 9,475 tons. From the United States there was a decrease of 3,588.

Loan.—In the latter part of the year a loan of \$3,500,000 was negotiated through the house of Westendorp & Co., bankers, of Amsterdam, with the proceeds of which it is intended to cancel the outstanding interior and exterior debt of the Republic. To secure the bondholders the income of all the custom-houses—after putting aside a fixed sum for the ordinary expenses of the Government—are given in guaranty for the period of thirty years, at the expiration of which time it is believed the loan, with interest (6 per cent.), will be paid.

Railroad at Sanchez.—This railroad, built with English capital, was originally intended to connect Santiago—the largest town in this district and principal depot of supplies for several neighboring towns—with the port of Sanchez, but the cost having already exceeded the original estimate, and finding some difficulty in securing the right of way, this intention seems to have been indefinitely postponed, and the terminus is now at La Vega, some 18 miles from Santiago, by the most feasible route. Should it ultimately be extended to the latter town it would still further injure the trade of this port.

There is a rumor current here that Messrs. Westendorp & Co., who are also allowed to engage in commercial enterprises, intend to send engineers to survey a route for a railroad from Puerto Plata to Santiago.

Although Sanchez is not in this consular district, yet, as it is one of the only two other outlets for its produce (Monte Cristy is the other), statistics of its trade may be interesting. I therefore inclose tables of exports, imports, and navigation for the past year, previous to which it was not in actual competition with this port.

Political.—The first election under the revised constitution, which provides for the formation of an electoral college, to elect President and Vice-President, took place on the 1st and 2d of November, and resulted in a triumph for the friends of General Heureaux, the present incumbent, and who at the formal meeting of the college was declared elected. He will take his seat as President, for four years (instead of two as heretofore), on the 27th of February next.

There were some attempts at disturbance after the result of the election was known, and at Puerto Plata it was quite serious, the insurgents taking possession of the town one morning and holding it several hours. They were finally driven out, and, not receiving the support which they anticipated from their friends in town, the movement soon fell through. A number were captured and imprisoned, and others presenting themselves with arms were paroled and allowed to go to their homes.

W. MOREY, Consul.

UNITED STATES CONSULATE,
Colombo, Ceylon, July, 1888.

CHINA.

AMOY.

REPORT BY CONSUL CROWELL.

The subjoined facts in reference to the trade of this port apply to the year ending December 31, 1888:

SHIPPING.

The total number and tonnage of vessels entered and cleared was 1,787 vessels of 1,596,147 tons, against 1,881 vessels of 1,663,377 tons in 1887. Of this tonnage the British flag represented about 81 per cent., the German flag 7 per cent., the Chinese flag 7 per cent., and the remaining 5 per cent. was represented by the flags of all other nations, the United States being one of them.

IMPORT AND EXPORT TRADE.

The gross value of trade increased but little over 1887, being 15,673,040 Haikwan taels against 15,505,531 Haikwan taels in the preceding year. The imports increased 490,175 Haikwan taels, while the exports declined 322,666 Haikwan taels.

OPIUM.

The trade in this pernicious drug still continues to increase, the amount imported being 6,873 piculs against 6,363 piculs in 1887, an increase of 68,000 pounds of the drug which is at once the Chinaman's favorite joy and his frightful curse. The financial profits of this trade mainly accrue to English merchants and the British Indian Government. To moralize over the evils of the opium trade would be of no value; to any intelligent person the bare statement of the facts is sufficient. If the doctrine of rewards and punishments is to be exemplified in this matter, some one will have a heavy load to carry before the end is reached.

KEROSENE OIL.

The trade in this article, including that received and re-exported to other Chinese ports, shows an increase of about 97,000 gallons. During the month of October, 1888, a direct importation from New York of 15,000 cases of kerosene—of 10 gallons each—occurred. It is the first direct importation from the United States which it has been my pleasure to chronicle. I understand a further direct importation of American oil will be made early in 1889. Seventy thousand gallons of Russian oil arrived at this port via Nagasaki, Japan. It did not find much favor here, and sold about 50 cents per case less than the American oil.

TEA.

There was an increase in this article of export, the amount being 182,663 piculs against 162,211 piculs in 1887.

I last year quoted from the report of the then commissioner of Chinese customs, J. McLeavy Brown, esq., as to the poor quality, etc., of the Amoy Oolong teas. A new commissioner, Mr. J. Lloyd E. Palm, has succeeded him at this port; and as sustaining what his predecessor said, as well as that which I had had occasion to report about the inferior quality and undesirable character of the Amoy Oolongs, I quote from Commissioner Palm's trade report, dated February 18, 1889, as follows:

"The first musters of Amoy Oolongs were on offer about the middle of May, or about a fortnight later than usual. I am told that the quality throughout has been somewhat disappointing, as the sole object of tea men seems to have been to produce at a low cost. The crop placed on the market is said to have been about the worst that has been seen for many years, and the proportion of good and superior grades turned out to be extremely small. An expectation having been entertained that the crop would have proved even shorter than it did tended to a certain degree to foster some speculative demand,

and in August the market, it is said, was cleared at \$15.50 for fair cargo, while during the rest of the season fresh arrivals readily found buyers on the same basis. The average price realized was \$14.69 per picul, or just about 10 per cent. over the price realized for the crop of 1887. Although the quality of last season's crop of Amoy Oolongs was about the worst on record, still the results to tea men are said to have been fairly profitable, and the supply has been somewhat larger than was at first anticipated. While it is possible that there may be an increase in the yield next season, still a good deal will depend upon the course of the American market and the prices that are obtained for the first crop. It is also to be hoped that the producers will take more care in cultivating the leaf, and endeavor to raise the standard of the quality, as otherwise the demand for their teas is likely to be gradually extinguished."

The average prices realized for teas during the past nine years are as follows:

Year.	Amoy Oolongs, per picul.	Formosa Oolongs, per picul.	Year.	Amoy Oolongs, per picul.	Formosa Oolongs, per picul.
1880.....	\$18.09	\$39.50	1885.....	\$19.37	\$35.12
1881.....	16.18	35.65	1886.....	16.65	37.72
1882.....	14.11	34.04	1887.....	13.35	34.46
1883.....	17.12	36.13	1888.....	14.69	36.95
1884.....	19.43	34.85			

Of the season's teas 18,579 piculs, or 2,477,200 pounds, were sent by the Canadian steamship line to Vancouver, British Columbia, and thence by the Canadian Pacific Railroad to the United States. Late in the season—the United States restriction law having cut off the revenue from the San Francisco steamers arising from the Chinese (laborers) passenger traffic—they sent two steamers into this port for tea, and 8,592 piculs, equal to 1,135,680 pounds, were carried by them to San Francisco. But the bulk of the season's crop went via the Suez Canal in English steamers to New York, though the quantity by this route, owing to the competition of the Canadian, and San Francisco steamers, was less than went in former years. If the San Francisco steamers continue to call at this port and properly look after and accommodate this trade, I feel assured that they will in the future largely increase the quantity of tea going hence via San Francisco, and their own profits as well.

PASSENGER TRAFFIC.

The number of natives who left this port during the year was 73,663, of which number 47,908 were for the Straits (English) Settlements, 13,269 were for the Philippine Islands (Spanish possessions), and 416 were for the Dutch possessions in Java, the remainder being for Hong-Kong and coast ports. The number of natives returning to this port was 54,714, showing an excess of 18,919 persons leaving the port over the number returning, and making a total movement of Chinese population of 128,347 persons. This shows how willing the Chinaman is to go where he can make a profit for himself, and is suggestive of grave consequences following this incipient overflow from the vast population of this great empire, which, unrestricted in future years, foretells a human torrent similar to that which once swept over southern Europe. So this movement of population, as yet only in its infancy, may yet overflow all barriers but force, and make conquest for itself of the richest islands of the Pacific, Australia included.

It may or may not be political conquest, but none the less will it be a commercial conquest of some of the fairest and most productive portions of the earth, until the Pacific Ocean may become simply a Chinese sea. For they are a "peculiar" people, with a marvelous history behind them, and wonderful possibilities before them which may or may not be realized.

TRADE WITH THE UNITED STATES.

The trade with the United States amounted during the year to \$3,879,272 in United States gold. This was chiefly teas exported to America. While the value of American products imported to Amoy, so far as they can be ascertained, amounted to \$234,455 in United States gold. This was chiefly for cotton drills, flour, ginseng, kerosene oil, and wheat.

WM. S. CROWELL,
Consul.

UNITED STATES CONSULATE,
Amoy, July 10, 1889.

FOOCHOW.**REPORT BY CONSUL CAMPBELL.****REVIEW OF TRADE.**

The net value of the trade of the port of Foochow for the year 1888 shows an increase over 1887 of 2,675,186 Haikwan taels.* The amount for 1888 is 17,161,755 taels and for the previous year 14,486,569 taels. Towards this increase foreign imports contributed 741,322 taels, native imports 419,894 taels.

The advance in foreign imports is mainly due to the large importation and enhanced value of opium during the year, and that in native imports is accounted for by the great quantity of cereals brought from the north in consequence of injury to the local crops by floods. The higher value of native exports, notwithstanding the diminished shipments of tea is explained mainly by the fact that while the quantity of tea exported decreased, its value greatly increased. The tea season opened much earlier and at prices much higher in 1888 than in 1887. The prices paid for some "fancy crops" were nearly double those of 1887.

The gross value of the trade during the year was: Foreign goods, 4,550,454 taels; native goods, 12,913,639 taels; grand total, 17,264,076 taels.

IMPORTS.

The imports of opium are much larger than for last year, 6,166 piculs (picul = 133½ pounds) having passed into consumption in 1888, while in 1887 there were 4,994, and in 1886, 4,903. The use of the drug is gradually increasing among the native people, notwithstanding its deplorable effects. Malwa exceeds by 444 piculs the figures of 1887, and the prices paid for it were much higher than in the preceding year. The consumption of Bengal was greater than the preceding year. This brand is in high favor, being free from adulteration. The prosperity of the opium trade is said not to benefit the large foreign firms engaged in the business, for the customs bonding system has made it all but impossible to compete with the native traders. There has been an increased importation of other foreign goods, such as cotton, piece goods, shirtings, etc., which show an advance of upwards of 12,000 pieces. It is difficult to account for this increase. Metals remain about the same, excepting tin and lead which show an increase. Kerosene oil stands 20,000 higher than the quantity imported the preceding year. The consumption of kerosene oil is undoubtedly on the increase, notwithstanding that the high officials have prohibited its use, on the alleged grounds that it is dangerous on account of fires. This prohibition, however, is not rigidly enforced.

* The Haikwan tael = \$1.15 American.

TRADE IN NATIVE IMPORTS.

The trade in native imports covers all the productions of China, embracing everything taken from the soil or produced by the industry and ingenuity of the natives. Articles of this character are imported from the several ports of China and are brought here in the coasting ships and Chinese junks. The value is given in Haikwan taels:

Imports from Chinese ports.....	2, 022, 817
Imports from Hong-Kong.....	870, 304
Total.....	3, 309, 121

TEA EXPORTS.

The export of tea for the year 1888 shows a falling off. The quantity exported in 1887 was 615,673 piculs; in 1888 the quantity was 553,235 piculs, showing a decrease of 62,438 piculs. The loss was in exports to Great Britain and British America. There was an increase in the quantity shipped to the United States of America of 5,795 piculs.

A competent authority on the specialties of the trade in an interesting and valuable account of the trade of 1888, says:

"The tea season for the year has been characterized by much the same features as in 1887, viz: A shrinkage of supplies, with unfortunately but little relief to the already overstocked London and colonial markets except in the negative sense that their complete collapse has been averted, for without doubt had so much tea been picked and forwarded by natives to Foochow as in 1887, prices would have receded to a ruinous point for both natives and foreigners.

"The competition from India and Ceylon is beginning to be seriously felt. It is in Great Britain that India and Ceylon are making such rapid progress, and it is there that Foochow teas are losing their position, as shown by the following export figures:

"There were exported to London in 1886 53,000,000 pounds; in 1887, 45,000,000 pounds; and in 1888, 32,000,000 pounds.

"The exports from India to Great Britain have largely increased during these years. In the Australian colonies the Foochow teas appear to be holding their own, as although Indian and Ceylon teas are increasing so likewise does the consumption of the Foochow article. Prophets, however, are not wanting who declare their belief that even in this market Foochow teas will in the near future decline in favor and be gradually displaced by Indian and Ceylon productions."

Tea exported during the year 1888.

SHIPPING.

The total tonnage of sailing vessels and steamers, aggregating 596,778 tons inwards and outwards, has fallen below that of 1887, as a probable consequence of the diminished demand for freight brought about by the curtailed shipments of tea.

Number and tonnage of vessels entered and cleared during 1888.

64.22 piculs ginseng	30,509.16
172,680 gallons kerosene	37,102.60
Total	98,482.84

UNITED STATES CONSULATE,
Foochow, March 30, 1889.

J. C. A. WINGATE,
Consul.

NEW CHWANG.

REPORT BY VICE-CONSUL BANDINEL.

IMPORTS.

There has been an increase in the following goods, viz: American drills, which are said to be of better quality than last year; white shirtings, which have taken the popular fancy; handkerchiefs and yarn, which are firmly established as articles of general consumption. In most other articles there is a decrease, owing to the floods. Metals show generally a decrease, owing to the same cause, and though there is an increase in old iron and tin-plate, importers have been unable to dispose of their stocks.

Sugar shows a decrease, partly due to large stocks remaining over from 1887, partly to higher prices in the South. In sundries there has generally been a decrease, owing to the disastrous inundations. It is satisfactory to note that there has been a great increase in kerosene oil, window-glass, and matches. Sea-weed, also, has been largely imported to take the place of the ruined crops of vegetables. In woolen goods there has been a great increase in Italian cloth, and but little alteration in other descriptions.

EXPORTS.

There has been a decrease in the following articles, viz: Fruit and pearl barley, the crops of which were deficient; prawns and fish, which were scarce and dear; silk, which was injured by drought and floods. There was, also, a decrease in the value of skins, though an actual increase in the quantity exported.

There has been an increase in the following articles, viz: Liquorice and tobacco-leaf, which are very cheap, owing to the good crops in 1887; cocoons, for which there was a great demand in France; beans and castor-oil, for which there was a great demand in South China.

NAVIGATION.

The ice broke up on the 22d of March, and the first steamer arrived on the 25th, but no sailing vessel before the 1st of April. The last steamer and the last sailing vessel left on the 24th November. Ice first appeared in quantity on the 23d November, and the river froze across on the 2d of January.

The figures given in the tables which follow, show, when compared with those of 1887, an increase in steamers of 19 vessels and 16,160 tons, and a decrease in sailing vessels of 14 vessels and 5,539 tons, being a total increase of 5 vessels and 11,621 tons.

Two charters were effected at this port, although at times there was an active inquiry for tonnage. It is worthy of note that an unusually large number of steamers (principally German) were under monthly charter to Chinese.

Business was very good in spring, quiet in summer, and dull in the fall.

The ill effects of the floods will probably be more apparent in the figures for 1889.

J. J. FREDERICK BANDINEL,
Vice-Consul.

VICE-CONSULATE OF THE UNITED STATES,
New Chwang, March 22, 1889.

Imports at Newchwang for the year ending December 31, 1888.

T. G. GOWLAND,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Tamsui and Keelung, 1889.

JAPAN.

THE JAPANESE BUDGET.

TRANSMITTED BY MINISTER HUBBARD.

[Translation.]

We hereby give our sanction to the Budget of revenue and expenditure for the twenty-second fiscal year of Meiji and order it to be promulgated.

(His Imperial Majesty's Sign-Manual.)
(Privy Seal.)

Dated the 5th day of the third month of the twenty-second year of Meiji.
Countersigned by

Count KURODA KIYOTAKA,
Minister President of State.
Count MATSUGATA MASAYOSHI,
Minister of State for Finance.

IMPERIAL ORDINANCE NO. 23.

ART. 1. The total amount of the revenue for the twenty-second fiscal year of Meiji is hereby fixed at 76,600,185.234 yen, and that of the expenditure at 76,596,312.759 yen; and the receipts and expenditures under the various headings of the Budget are fixed as follows:

ART. 2. The maximum amount of treasury bills to be issued in the twenty-second fiscal year of Meiji shall be 13,000,000 yen.

1. Expenses for constructing the court of cassation of Osaka.....	Yen. 38,000.000
2. Expenses for constructing the court of Hiromaye....	23,156.000
3. Expenses for constructing the court in Otsu.....	19,950.000
4. Expenses for constructing the court in Matsuyama....	16,748.000
5. Expenses for constructing the court in Yokohama..	18,542.000
Total	116,396.000

Total expenditures in the department of justice.... 180,964.000

Expenditures in the department of education.

ART. 1.—Subsidies:

1. Subsidy to the Tokio school for the deaf and blind....	3,000.000
2. Subsidy to German society school.....	7,000.000
Total	10,000.000

ART. 2.—Repairs and constructions.

1. Expenses for constructing the Imperial University library and the rooms for teaching natural philosophy	80,000.000
--	------------

Total expenditures in the department of education. 40,000.000

Expenditures in the agricultural and commercial department.

ART. 1.—Expenses for the international exhibition in Paris.....

51,818.875

ART. 2.—Subsidies:

1. Advance to Kagoehima Ken for improvement of sugar manufacture.....	10,000.000
---	------------

Total expenditures in the agricultural and commercial department..... 61,818.875

Expenditures in the department of communications.

ART. 1.—Subsidies:

1. Subsidy for Nippon Yusen Kaisha.....	880,000.000
2. Subsidy for Osaka Shosen Kaisha.....	50,000.000

EXTRAORDINARY EXPENDITURE—continued.

PART II—Continued.

Expenditures in the department of communications—Continued.

ART. 1.—Subsidies—Continued.

3. Subsidy for Osaka nautical school.....	Yen. 2,900.000
4. Subsidy for navigation between Kobe and Nawa....	12,000.000
5. Subsidy for navigation between Nagasaki, Ninsen, Chosoo, and Tientsin	15,000.000
Total	990,000.000

ART. 2.—Extraordinary expenses for travel to foreign countries:

1. Expenses for attending International Marine Conference.....	4,521.000
--	-----------

ART. 3.—Repairs and constructions:

1. Expenses for additional building of postal and telegraphic bureau in Tokio.....	25,800.000
2. Expenses for constructing postal and telegraphic office in Osaka.....	10,000.000
3. Expense for constructing postal and telegraphic office in Sendai.....	10,000.000
Total	45,800.000

Total expenditures in the department of communications..... 1,010,321.000

Expenditures for the office of the third international industrial exhibition.

ART. 1.—Expenses for the office of the third domestic industrial exhibition:

1. Salaries and allowances ...	19,946.750
2. Office expenses.....	101,065.385
3. Traveling expenses	431.500
4. Repairs and construction..	108,790.085
Total	229,233.720

Contingent funds of the treasury not included in the above articles:

1st contingent fund	500.000
2d contingent fund.....	500.000

Total 1,000,000.000

Total sum of the extraordinary expenditures..... 10,605,422.313

Grand total of the expenditures..... 76,596,312.769

STATEMENT OF DETAILS RELATING TO THE BUDGET OF REVENUE AND EXPENDITURE FOR THE TWENTY-SECOND FISCAL YEAR OF MEIJI (1889-'90).

The amount of the ordinary revenue estimated in the budget of revenue and expenditure for the twenty-second fiscal year of Meiji (1889-'90) is 75,714,131,455 yen, and that of the extraordinary revenue 886,053,779 yen, making the total 76,600,185,234 yen in the revenue. On the other side, the amount of the ordinary expenditure is 65,990,890,446 yen, and that of the extraordinary expenditure 10,605,422,313 yen (of this 1,000,000 yen is the reserve fund, which is not included in the articles of extra-

ordinary expenditure), making the total amount 76,596,312,759 yen in the expenditure. Thus the revenue exceeds the expenditure by 3,872,475 yen.

Comparing the total amount of the revenue (76,600,185,234 yen) with that of the revenue for the preceding fiscal year (75,398,012,363 yen, the navy loan, amounting to 5,357,910,639 yen, being deducted for purposes of comparison), the increase is 1,202,172,871 yen. And, comparing the total amount of the expenditure (76,596,312,759 yen) with that of the expenditure for the preceding fiscal year (75,389,942.93 yen, the sum of 5,334,516,839 yen, special expenditure of the navy department, as well as 23,394 yen, the expense connected with the issue of the navy loan bonds, which is now placed in the expenditure of the financial department, being deducted), the increase is 1,206,369,829 yen.

Important points relating to the annual estimates are as follows:

(1) Until the last (twenty-first) fiscal year revenue was divided into three parts, first, second, and third; and expenditure into four parts, first, second, third, and fourth. Also each part of the revenue was classified into kwan (article), ko (section), and moku (item); and each part of the expenditure into kwan, ko, moku, and setsu (subitem). But in practice this classification was not found convenient. The system is therefore altered in the current fiscal year, and the revenue, as well as the expenditure, are divided into ordinary and extraordinary. The revenue, ordinary or extraordinary, is not divided into parts, but the ordinary expenditure is divided into two parts, first and second. The reserve fund in the national treasury is not included in the articles (kwan) of the extraordinary expenditure. Again, though there is no change with regard to the order of the kwan, ko, moku, and setsu, yet certain changes in the manner of addition or re-arrangement are made for the sake of greater convenience and perspicacity.

(2) The maximum amount of treasury bills to be issued in the current fiscal year is now fixed by imperial ordinance. According to rough estimates made at present, this maximum will be reached in November only, of the twenty-second year of Meiji (1889). Therefore, the average estimate of amounts issued in each month of the fiscal year should not be more than 7,070,000 yen, a sum less than the tenth part of the total revenue or expenditure.

(3) As the time of the payment of the sixth installment of the land-tax is from the 1st to the 20th of April, its receipt is subsequent to the expiration of the fiscal year. Accordingly, in the first half of every fiscal year, the amount of the revenue is always less than that of the expenditure, and it becomes indispensable to issue a greater amount of treasury bills during that period. In the twenty-first fiscal year of Meiji, a method to remedy this inconvenience was devised and received the sanction of the cabinet. By this method 7,500,000 yen, corresponding to the estimated amount of the revenue to be derived from the land-tax in the sixth period, is defrayed out of the reserve fund, and included in the general account. Thus the amount of the revenue derived from the revenue of the land-tax in the sixth period is withdrawn from the twenty-first fiscal year of Meiji, and added to the estimates of the current fiscal year. Hence, though in the last fiscal year, the amount of payments of interest on treasury bills and of fees of management was estimated as 667,000 yen (approximately), yet, in the current fiscal year 364,000 yen (approximately), suffices for the payment of interest on treasury bills and of fees. The decrease thus resulting (about 302,000 yen) is applied to the redemption of other national debts.

(4) The rates of taxes on the export of saké and the like from Okinawa prefecture are fixed according to imperial ordinance No. 12, promulgated in March of the twenty-first year of Meiji. The rate of the tax on tobacco is modified in accordance with imperial ordinance No. 20, promulgated in April of the same year. The rate of tax on shoyu is modified according to imperial ordinance No. 47, promulgated in June of the same year. The duty on the exportation of coal is abolished in accordance with imperial ordinance No. 56, promulgated in July of the same year. The rates of stamps for registration are determined according to imperial ordinance No. 66, promulgated in October of the same year. The rates of taxes on time bargains of rice exchanges is modified according to imperial ordinance No. 75, promulgated in November of the same year. Finally the duties on the exportation of medicines and drugs are abolished according to imperial ordinance No. 83, promulgated in December of the same year.

(5) By imperial ordinance No. 62, promulgated in August of the twenty-first year of Meiji, the revenue from river banks in ku (urban districts) of the city of Tokio is transferred to a fund for the improvement of the city of Tokio. Thus the revenue derived from rents of river banks in the city of Tokio is omitted from the estimates of the current fiscal year, though, hitherto, it was included in the receipts of the national treasury.

(6) On account of transferring the coal mine of Miike to private ownership, in January of the twenty-second year of Meiji, and in consequence of placing the two mines of Sado and Ikuno in the property of the imperial household from the twenty-second

fiscal year of Meiji, the profits to be derived from these three mines are not included in the receipts for the present fiscal year.

(7) Although the railway in Hokkaido was let to private capitalists in March of the twenty-first year of Meiji, yet the construction of the railways between Daifu and Hamamatsu, between Sekiyama and Karuizawa, and between Kodzu and Shizuoka, is completed. Thus, compared with the budget for the last fiscal year, it will be seen that there is a considerable increase in the amount of the profit derived from railways.

(8) The privy council was established according to imperial ordinance No. 22, promulgated in April of the twenty-first year of Meiji, and the Kagawa prefecture was erected according to imperial ordinance No. 79, promulgated in December of the same year. Their expenses are therefore added to the budget for the current fiscal year.

(9) On account of establishing four consulates at Bremen in Germany, Odessa in Russia, and Bombay and Vancouver in English territory, expenditures on these accounts are added to the budget for the current fiscal year.

(10) By imperial ordinance No. 72, promulgated in October of the twenty-first year of Meiji, the Temporary Historiographical Bureau in the Cabinet was abolished, and its affairs transferred to the Teikoku Daigaku (Imperial University). By imperial ordinance No. 81, promulgated in December of the twenty-first year of Meiji, the observatory hitherto placed under the three departments—the home, navy, and educational—and business relating to the making of almanacs hitherto transacted by the home department were transferred to the control of the educational department. Thus, in the estimates of the last fiscal year, the appropriation included in the expenditure of the cabinet for the compilation of history, and the appropriation included in the expenditure of the home department for astronomical observations, as well as for the compilation of almanacs, are excluded from the expenditures of those departments, and are added to the expenditure of the Teikoku Daigaku under the control of the educational department.

(11) By imperial ordinance No. 61, promulgated in August of the twenty-first year of Meiji, the proportional sum to be defrayed out of the national treasury for the expenses of local police was altered. There is a resulting decrease of 320,000 yen approximately on this account, as compared with the estimates of the last fiscal year. Further, the expenditure for the higher police in each locality, hitherto defrayed out of the fukin levied in Fu and Ken, is now added to the budget, the fukin having been placed under the control of local assemblies as part of the local taxes. On this account a sum of 150,000 yen is added to the estimates of the current fiscal year, as expense for special services of the regular police of the home department.

(12) The expenditure in connection with high schools, hitherto partly charged to the local taxes, is now defrayed out of the national treasury. Thus 150,000 yen is added to the appropriation on account of schools under the control of the educational department.

(13) In consequence of the decision of Government in June of the twenty-first of the year of Meiji, to grant a subsidy to the Kinshu Railway Company at the rate of 4 per cent. per annum on paid-up capital until the month before the opening of business in each division of the railway, this subsidy is added to the estimates of the current fiscal year.

(14) The navy special expenditure of 17,000,000 yen; that is to say, the total amount of the navy loan raised under the authority of imperial ordinance No. 47, promulgated in June of the nineteenth year of Meiji, was all included in the budgets of the last three fiscal years. Thus, this item is not mentioned in the budget of the current fiscal year, but the expenditure of the navy department is increased to a total of 7,000,000 yen in consequence of contemplated additions to that arm of the service. The reason why the ordinary and extraordinary expenditures of the navy department amount in the present budget to 7,150,208 yen is that a sum of 150,000,000 yen is specially required to meet the cost of works at Yokosuka dockyard, and a sum of 208 yen to meet the cost of works at Onohama dockyard.

(15) A gradual extension of the functions of the department of justice, and the development of business in the department of communications, explain the fact that each of these departments requires an increase of appropriation. Thus it will be seen that there is a large addition to the estimated expenditures of both departments in the current fiscal year.

(16) Matters relating to the redemption of paper money having been gradually placed on a sound footing, there is no necessity to transfer any large amount of money to the fund for this purpose in the current fiscal year. Hence a certain diminution appears under this heading in the estimates of the current fiscal year.

(17) No appropriation for the construction of the imperial palace appears in the estimates of the current fiscal year, that work having been completed.

Detailed comparisons of increase or decrease under each article (Kwan) and section (Ko) of the revenue and expenditure for the twenty-first and twenty-second fiscal years of Meiji, are given in the detailed estimates of revenue and in the epitomized statement

of expenditures for each department. But owing to the modified method of classification now adopted—as explained above—the several items of the old and new budgets differ more or less from one another, and in some cases there is a radical alteration. In such cases, the amounts appearing under the articles and sections in the budget of the current fiscal year have been taken as a basis and compared with the appropriations of a similar nature and for similar purposes, in the budget of the preceding fiscal year. The resulting increases or decreases are then given. But with regard to items (moku) and sub-items (setu), it is impossible to arrive at accurate conclusions by comparison. Therefore the comparison of the increases or decreases under the moku and setu is omitted from the budget of the current fiscal year.

The calculation of the estimates for the current fiscal year has been accomplished as set forth in the above items. But with regard to the budget for the next, or twenty-third, fiscal year, it is to be earnestly hoped that in pursuance of the recently promulgated law (No. 4), where provision is made for accurate financial methods, still greater efforts will be made to exhibit precise details as to the origins and causes of expenditures; that care will be taken to adhere strictly to the system of fixed establishments, to adopt a system of accounts in respect of articles, to employ every possible means of avoiding needless outlay and confining expenditure to absolute necessities, to the end that a strong foundation may be laid for promoting the progress of the country and increasing the prosperity of the nation.

Comparative tables are herewith annexed, showing the increases or decreases of the actual amounts of the national debts, reserve fund, advances by Government, central fund for relief of agricultural distress, and the special fund (the calculations being made at the end of the first month of the twenty-second year of Meiji) as compared with the actual amounts shown in the appendix of the budgets for four years since the eighteenth year of Meiji.

Count MATSUGATA MASAYOSHI,
Minister of Finance.

To Count KURODA KIYOTAKA,
Minister President of State.

Dated the fourth day of the third month of the twenty-second year of Meiji (1889).

I, increase; D, decrease.

The principal items of increase or decrease in this table as compared with the last fiscal year are as follows:—

(1) The increase in the amount of the national debts is due to the facts that although there is a decrease of 23,353,557.50 yen through the redemption of the different kinds of public loans, yet there is, on the other hand, an increase of 25,759,020 yen owing to the issue of navy loan bonds in this fiscal year to the amount of 2,000,000 yen in accordance with the navy loan act, imperial ordinance No. 47 promulgated in June of the nineteenth year of Meiji; to the issue of consolidated loan bonds, to the amount of 23,560,900 yen (in accordance with the consolidated public loan act, imperial ordinance No. 66, promulgated in October of the 19th year of Meiji); and to the supplemental issue of new bonds, to the amount of 2,120 yen, for the adjustment of loans. With reference to the increase of consolidated loan bonds as compared with the redeemed amount of the different kinds of loans, it is to be noted that a redemption of a portion of the latter liabilities has not yet been fully accomplished, though the consolidated bonds have been already issued.

(2) The decrease in the amount of the paper currency in circulation is owing to its replacement by silver coins to the extent of over 8,696,856 yen, and to the withdrawal of 121 yen, of defaced paper currency.

(3) The decrease in the reserve fund is due to the facts that, although there is an increase of 7,651,655,637 yen, on account of the transfer of 4,300,000 yen from general account to this item (being the sum appropriated for the redemption of paper currency), and on account of the receipt of 3,351,655,637 yen (being profit from differences of rate in specie exchange and interest on deposits); yet there is a decrease of 17,377,971.196 yen, owing to the exchange of 8,666,856.20 yen, of silver coins against paper currency; to the transfer of 7,500,000 yen to the general account, in anticipation of the revenue to be derived from the land tax for the sixth period in the twenty-first year (as explained in the Budget for the twenty-second fiscal year of Meiji); and to a reduction of 1,181,114.996 yen on account of loss on exchange, and of interests on annual installments paid in the aggregate.

(4) The decrease in advances by Government is due to the facts that, although there is an increase of 572,725,348 yen, on account of the fund for the encouragement of industries, and of new advances to shizoku emigrating to the Hokkaido; and of 60,024.127 yen on account of additions of interest to principal, making a total increase of 632,749,475 yen, yet there are decreases of, first, 394,482 yen owing to the fact that money received in annual installments for Government properties sold, which money

was formerly included under this heading, is now transferred to a special account according to arrangements made in the twenty-first fiscal year of Meiji; secondly, 552,756.541 yen on account of repayments made; and thirdly, 1,044,646.003 yen for loss and liquidation, making a total decrease of 1,991,884.544 yen.

(5) The increase of the fund for Government industries is due to the facts that, although there is a decrease of 106,328.029 yen in respect of funds received for industrial establishments transferred by the Government to the people, and in respect of payments on account of losses, yet, on the other hand there is an increase of 595,519.955 yen in consequence of the expenditure on account of the Yokohama Water Works and the Navy Dockyard in Onohama, etc., being entered under this heading.

(6) The increase of the central fund for relief of agricultural distress is due to the fact that, although there is a decrease of 49,316.606 yen on account of the relief of distress in Kagoshima Ken, yet there is an increase of 416,709.848 yen on account of entering in the accounts of the twenty-first fiscal year of Meiji the annual amount of appropriation according to the Law of Reserve for relief of Agricultural Distresses, promulgated by Notification No. 31 of the old Daijokwan, in June of the 13th year of Meiji, and on account of interest on money deposited.

(7) The increase of the special fund is due to the fact that the interest on Government bonds previously purchased by the fund, is added.

NAGASAKI.

REPORT BY CONSUL BIRCH.

IMPORTS AND EXPORTS.

The import trade it will be observed for the past year shows an increase of \$474,380, while the export trade shows a decrease of \$712,725, a total decrease in the trade of the port of \$238,345. The tables appended have as usual been compiled from the published statistics of the Japanese Government.

PETROLEUM.

Kerosene continues to be the principal article of import direct from the United States. Two direct cargoes arrived from Philadelphia, and some reshipped American kerosene reached here from both Shanghai and Yokohama. Deliveries for the year, however, show considerable falling off as compared with those of 1886. This does not mean decreased consumption, but is the result of many places in the surrounding country having drawn their supplies from Kobe, where, owing to competition, prices have ruled lower. Some 15,000 cases have been shipped to Vladivostock, the neighboring military post in Siberia, during the year, and 10,000 cases to Hakodate. Samples of Russian oil from Batoum have reached this port. The cases and cans are very similar to the American. The oil is water white and called 130° test. It is not at present so well received as the American article, but its friends claim that it will eventually compete with it, if it can be laid down in Japan cheaper. The advanced cost of oil in the United States the latter part of the past year will, I fear, make a good opening for the Russian article in both China and Japan, and as in my estimation the introduction of Russian oil is a real danger to the import trade of Japan with the United States, I think it proper to quote the following newspaper article relative to the matter which has appeared in the Japan Mail, published at Yokohama.

"There recently arrived here the English steamer *Monarch*, which brought to this city from Batoum 536,000 gallons of oil in sixty-seven thousand cans. It is the first time that Russian oil has appeared in Japan. It was ordered by Jardine, Matheson & Co., one of the largest English firms doing business in East Asia, through the Commercial and Industrial Company of Baku. The *Monarch* was chartered specially for that purpose. At the very news of the arrival of the Russian oil at Japan, the price of American oil fell 5 cents per can. It is believed here that Russian oil will ultimately drive American oil out of Japan, owing to its superiority and to the great influence here of the firm which has undertaken the business. Both English and Japanese papers welcome Russian oil, that it may put an end to America's monopoly in this branch of trade in Japan. Jardine, Matheson & Co. are very confident of a very profitable sale of this oil, and, as it is reported, even before the *Monarch's* arrival here, they have sent to Batoum another order for still a larger amount of oil." This news, we are informed, has been received in Russia "with great joy." The oil men of Russia "hope to ultimately drive American oil from the Old World, leaving only America for the oil men of America."

COREAN TRADE.

A feature of the import trade at this port, which does not figure in the returns, is the trade in certain staples for Corea, such as shirtings, Victoria lawns, drills, etc. The large demand for shirtings in Corea is mostly supplied with Manchester goods, which are simply transhipped here to the steamers plying between this port and the Corean ports or stored in bond until sold. The demand is for 10 and 11 pound shirtings of full width, 38 and 40 inches. This trade with Corea is now almost entirely in the hands of Japanese merchants, who, however, get their supplies from foreign importers. Victoria lawns in considerable quantities also pass through this port in the same manner during the spring and summer. In my last year's report I called attention, at some length, to the fact that, with the exception of drills, the bulk of the import trade to Japan and Corea, in textile fabrics, was not with the United States.

The Corean and Japanese trade take our drills because they are of superior purity and more excellent quality than the drills of other nations trading in these markets, and these are the chief considerations with this class of goods, but they do not like our gray shirtings, lawns, or muslins, although acknowledging their excellent quality, durability, and purity, because they have not the weight, width, and finish the trade demands, and a demand which the American manufacturer must recognize if he wishes to compete successfully in the eastern markets with the manufacturers of Great Britain, Germany, and France. I am sure it would be worth the while of the home manufacturers to turn these requirements into account. The trade in sugar has considerably increased. The importers are principally Chinese.

The other articles of import from the United States, as in 1886, have consisted of California canned goods, American sewing-machines, clocks, patent medicines, light hardware, etc.

PRINCIPAL EXPORTS.

The staple articles of export aggregating the greatest value in 1886 have again this year consisted of tea, Corean hides, camphor, tobacco, rice, and coal. Although there has been during the past year a slight increase in quantity and value of the export of tea from Nagasaki due to a demand for it in North China where it is sent in original bales without any preparation, such as firing, etc., the trade with America and Europe has greatly fallen off. At the end of the year one of the direct exporters here closed his tea firing establishment, as the Nagasaki teas are but little wanted in the United States, and the demand from Canada has greatly decreased. This is partly due to over export of tea in 1886, which left a large surplus on hand, and partly to the tea-grower in this district being careless in picking and manipulating the leaf, thereby furnishing the trade with an article very much inferior to that of Northern Japan. The direct export of tea from this port is also less, owing to some demand for the inferior tea of this part of Japan in the Kobe and Yokohama markets for the purpose of mixing it with the better teas of those districts.

The export of Corean hides from this port to the United States, which two years ago promised well, shows during the past year a considerable decrease due to various causes, chief of which are the smaller number of hides shipped from Corea, low prices in the home markets, and the increasing demand in Japan for home consumption. Leather is becoming more in demand in Japan, and the Japanese are rapidly learning to prepare it. The city of Osaka has taken, it is said, about half the hides shipped from Corea during the past year, and if the demand continues, of which there is every reason to believe, the export trade in this article will cease. There was a slight increase in the export of camphor. Most of the supply was taken by one firm for shipment to the United States via Kobe. The rest was exported to Hong-Kong for transhipment to India and Europe.

It is feared that the surrounding country (notwithstanding the regulations of the Government to keep up the supply, viz, planting a tree for every one felled) is being denuded of camphor trees, and that there will be a scarcity of the drug in the market should there be an increased demand at home, as the newly planted tree is slow of growth. I may say that camphor wood as a timber, formerly so common here and an article of export, has almost disappeared from the market. Tobacco, which formerly was a leading article of export from Nagasaki, is not now in much demand, owing probably to the European markets being fully supplied with other cheap kinds. The shipments of rice and wheat from this port to foreign markets show a considerable falling off as compared with 1886. Sea-weed, cuttle-fish, medicines, pine planks, and timber have been exported to about the same extent as the previous year and almost entirely by the Chinese.

The past year has seen an increase in the export of coal, and, as in former years, it is the chief article of export. The output of the mines near here has amounted during 1887 to nearly 450,000 tons. Every step is being taken by the parties interested to foster the coal trade of this port, and the opening of the new mines, which I men-

tioned in last year's report, is still being carried on, and will, it is expected, be completed by the time the present working mines are exhausted. The export trade in coal from this port is the most promising for the future of Nagasaki.

DOCKS AND ENGINE WORKS.

The dock, patent slip, and engine works located here are still in successful operation. A cotton-yarn manufactory was established here in 1887, and is turning out about 800 cattiees of yarn daily.

SANITARY IMPROVEMENTS.

The various works for the sanitary improvement of Nagasaki are still being carried on, and we were not visited by either cholera or small-pox as an epidemic in 1887.

RAILROADS.

The proposed Kinahin Railroad of which I have spoken in former reports, will certainly be commenced in the year 1888. According to the present arrangement, work will be done first on the following lines, beginning at Simonoseki Strait, Moji to Onaga, Onaga to Hakata, and Hakata to Kurume. The respective distances are 20, 27, and 22½ miles, and the respective cost is estimated at \$829,950, \$1,105,940, and \$924,954. The first section is to be completed in December, 1889, the second in November, 1890, and the third in June, 1891. According to the same arrangement Nagasaki will be connected by rail with the principal places in Kirishin in June, 1896.

POST-OFFICE AND TELEGRAPH.

The postal and telegraph returns of Nagasaki for 1887, were as follows:

Post-office.

Ordinary letters	968, 608
Registered letters	62, 544
Postal cards	459, 175
Newspapers	429, 509
Books, etc	25, 502
Free	95, 709
Money-orders drawn	yen. 357, 795
Money-orders paid	do. 344, 224

Telegraph office.

Messages.	Sent.	Received.
Japanese	50, 707	44, 569
Local foreign	2, 423	2, 381

Messages from other points, but passing through Nagasaki office:

Japanese	130, 711
Foreign to foreign countries	22, 123
Foreign from foreign countries	21, 490

POPULATION.

There are 816 foreign adults and 215 children resident in Nagasaki, distributed as follows:

	Adults.	Children.		Adults.	Children.
American	56	12	Dutch	2
Austro-Hungarian	18	13	French	31	5
Belgian	2	German	7	6
British	64	29	Italian	4
Chinese	607	134	Portuguese	3	4
Danish	12	8	Russian	10	4

PROSPERITY.

From a native stand-point the year 1887 was a prosperous year. The crops were good and the Japanese pushed trade. Every year the increase in the number of native banks, cotton and iron manufactories, breweries, ship-building yards, etc., tells the story of native energy, and that every year the Japanese are depending less upon the import of foreign manufactured articles, and that they are adopting foreign methods in manufacturing for themselves the goods formerly purchased from the foreign importer.

JOHN M. BIRCH,
Consul.

UNITED STATES CONSULATE,
Nagasaki, November 13, 1888.

Imports at Nagasaki, for the year ending December 31, 1887.

OSAKA AND HIOGO.

REPORT BY CONSUL JERNIGAN.

The increase in the commerce and population of this port during the past three year has surpassed the most sanguine expectations, and more than fulfilled the most favorable predictions. Situated nearer the central part of Japan than any other open port, with a harbor favored with every natural advantage, and a climate where the summer heat does not last long, and the effect of the frost of winter is soon effaced by the bright sunshine, the future of the port promises to be even more prosperous than its past.

IMPORTS AND EXPORTS.

The statistics showing the value of the import and export trade of this port are taken from the reports of the Hiogo and Osaka Chamber of Commerce, and the values are estimated in Japanese currency, 1 yen being equal to 75.3 cents in gold.

The value and nature of this trade for the three years, 1886-'87-'88, are shown by the following table:

Imports and exports of Osaka and Hiogo.

Treasure	3,921,000	4,481,500	1,272,000

It will be observed that the above tables show a decided increase in the trade of this port for each of the years named, the import and export trade for 1886 aggregating, in yen, 21,000,000; in 1887, 35,000,000, and in 1888, 41,000,000. The increase in 1887 was not maintained over 1887 to the same extent as 1887 was over 1886, because the export in treasure in 1888 was less by several millions than during the two preceding years.

The foreign trade of Japan is in equally as prosperous condition. In 1887 it amounted to \$104,108,992, and in 1888 to \$131,160,744, an increase of \$27,051,752. During 1888 the trade of Great Britain increased 35 per cent., China's 11 per cent., United States' 10½ per cent., Germany's 12½ per cent., and France's 40 per cent. Large purchases of silk at the close of the year added materially to France's trade, as well as increased the trade of the United States.

TONNAGE.

The shipping interest of this port is also in a prosperous condition as compared with last year, which appears from the following tables:

1887.

Flag.	Description.	Entered.		Cleared.	
		No.	Tons.	No.	Tons.
British	Steamers	227	347,589	226	347,847
British	Sailing vessels	14	16,083	14	15,694

Danish	do	1	397	1	397
Swedish	Sailing vessel	1	498	1	498
Total	606	932,495	601	923,183

It will be noticed that the increase in the entrance and clearance of American ships for 1888 was, in number, eight more than for 1887, and an increased tonnage of 10,638.

T. R. JERNIGAN,
Consul.

UNITED STATES CONSULATE,
Osaka and Hiogo, February 27, 1888.

PALESTINE.

JERUSALEM.

REPORT BY CONSUL GILLMAN.

AGRICULTURE.

It would seem as if the long continued commercial depression which has afflicted Palestine had reached this year its climax. The prevailing drought has been disastrous in its consequences. In many parts of the country all agricultural products, cereals as well as vegetables and fruits, have been more or less injured, or completely destroyed for want of rain; while sickness and death have been alarmingly frequent.

The "former rain," which generally begins about the close of October, was not only unusually late in making its appearance, but came in too small an amount to be of much effect. As a result, plowing was delayed for six weeks later than usual. The "middle rain" was markedly deficient in quantity; and there was little or no appearance of the "latter rain" till the month of April, when all hope of it had been abandoned, and when, in most cases, it was too late to produce the desired effect. As early as the month of March cattle had been driven into many of the fields to devour the perishing crops, which it was evident, through insufficient moisture, would not come to perfection.

The volume of the export trade, though usually much smaller than that of the imports, has receded extraordinarily this year, giving only the amount of \$318,160, against \$1,142,710 of imports; a result that must be ascribed mainly to the bad crops in consequence of the failure of rain.

In fact, it is claimed that since the year 1876 Palestine has not seen a thoroughly fruitful year with crops of the maximum abundance; and that the fertility and strength of the soil have been suffering, more or less, during the greater part of this time, from insufficient rain; and the ensuing commercial impoverishment to the population of this country, in the course of the last twelve years, at a fair estimation will not fall far short of \$4,000,000. This means much for a people already so poor.

Besides this, other causes have been brought to bear. The increasing competition of wheat from India has, year after year, excluded Palestine wheat more and more from the European market; so much so, that at the present time, even with good crops, the export of this product would hardly prove remunerative to our merchants.

However, the check to exportation would seem to have prevented any extraordinary advance in prices.

The following statement gives the prices current in our market for wheat, corn, and other produce:

	Per measure.
Wheat.....	\$0.96
Barley.....	.50 to .80
Flour.....	1.12 to 1.75
Doura (maize).....	.50 to .60
Peas.....	1.44
Beans.....	1.92
Potatoes.....	.96
Vegetables generally about.....	.80

The measure of wheat contains 8 rattles, amounting to about 48 pounds.

THE ORANGE AND LEMON CROP.

The produce of the orange and lemon groves of Jaffa and its neighborhood, where those fruits are chiefly cultivated, has been comparatively good, or at least fair. Owing to the abundant means of irrigation at Jaffa, where the water is supplied from numerous springs and wells, by means of the ancient wooden water-wheel propelled by horse-power, the severe drought which so seriously injured fruits in other parts of Palestine was there of little effect. As a rule, about two-thirds of this important crop are exported. Of this, the greater part goes to Turkey itself and to Egypt. The price realized was \$12 per 1,500. The usage is that 1,500 oranges are reckoned to the thousand, so as to allow for all losses in transportation, such as decay, etc. Both oranges and lemons were of good quality; the Jaffa fruit being celebrated for its excellence the world over. The proportion of the lemon crop to that of the orange is about one per cent. A small proportion of limes is also produced, the soil being equally well adapted for the culture of this valuable fruit.

The amount of land at Jaffa and its vicinity devoted to the production of these fruits had been largely added to during the last few years, and in consequence land suited to this purpose has greatly advanced in price.

OLIVE-OIL AND OLIVES.

This has not been as good a year for olives as was last year. It has been estimated that the olive groves of Jerusalem and the surrounding villages have produced about 10,000 gallons of oil, which have sold at \$3.15 per gallon. Neither the olives nor the oil produced here are of as fine a quality as those from the Lebanon. It is probable that with better care of the trees, which generally receive but little culture or attention, the quantity and quality of the crop would be largely improved. The methods of extracting the oil are also of the crudest and most negligent character.

WINE AND GRAPES.

The grape crop also was this year inferior to that of the previous year; but still was fairly abundant. The grapes of Palestine are of superior quality and of immemorial renown. They are ripe from July to November; and never suffer from mildew, and are free from the diseases which have afflicted the vineyards of France and other countries.

An excellent article of wine is made here, and at reasonable prices. The German and Jewish colonies have largely planted vineyards, and have entered on the manufacture of wines to a considerable extent. These have already attracted some attention, and the export, though at present small, will doubtless improve when the various brands of wine are better known. At the German colony at Jerusalem, both claret and sweet wines are made of excellent quality, and of the pure unadulterated juice of the grape. Of the latter, one has been pronounced by competent judges equal to the celebrated *Lachryma Christi*. These wines retail at about 20 cents per quart bottle. Lower grades of wine are much cheaper.

Vines of the Isabella grape of the United States have been introduced into some of the vineyards at Jaffa and elsewhere. This grape, though among the earliest cultivated in the United States, is there regarded as rather inferior in flavor; but the climate and soil of Palestine have greatly improved the fruit, from which a highly esteemed wine has been produced.

In the German Colony a regular press is used to crush the grapes; but throughout the country at large the old, primitive methods for accomplishing this are still employed, as they are in many parts of Europe. Young men, throwing aside their

outer garments, with feet and legs bared to the thigh, literally tread out the juice, which is run off into wooden troughs, from which it is finally drawn or dipped into barrels or vats, to pass through the process of fermentation.

It may not be considered out of place to mention, in this connection, that the "King's wine-presses," referred to in Scripture, have been recently identified here. They are reservoirs cut in the horizontal face of the solid rock, to the northward of the city, and outside of the site of the third wall. It is to be feared that, in the increased demand for stone for building purposes in the immediate vicinity of Jerusalem, they will soon fall a prey to the quarry-men; and so disappear a most interesting relic, dating back to the times of the kings of Israel and Judah.

PETROLEUM AND OTHER IMPORTS.

An encouraging feature as regards imports is that petroleum from the United States has positively regained some of its lost ground; the tables showing this year a sale of 10,000 cases. As compared with the amount imported in 1887, which was only 1,200 cases, this must be regarded as a most favorable indication of the preference for the American article, and a return to its use, which I have done everything in my power to foster. The result must be attributed largely to the oil from Russia not satisfying in quality the requirements, notwithstanding the many professions which have been circulated as to greater care in its refinement and preparation.

It is unnecessary I should repeat the remarks on this subject which I have made in my previous reports. The only possibility we have of competing here with Russia in this article, is in keeping up the standard, and forwarding here only the best quality of the oil, while keeping the price as low as possible.

As to the other imports, I beg to refer to the accompanying tables. This is indeed a restricted field. Articles of every-day use by all classes in the United States, in a country so poor as this is, must be regarded by the masses as absolute luxuries.

OLIVE-WOOD WORK.

Among the principal industries of Jerusalem is the well-known olive-wood work. An average business has been done the past year, though the number of persons engaged in it and the eagerness to sell at low prices, would seem to imply that it is somewhat overdone. A great variety of articles are manufactured. Among the larger are pieces of household furniture, such as tables, writing-desks, chests of drawers, and wardrobes; while the smaller articles are of an innumerable description, including picture-frames, boxes and caskets, covers for books, paper-knives, ink-stands, and articles of devotion, such as crosses, crucifixes, communion services, rosaries, etc.

MOTHER-OF-PEARL WORK.

The town of Bethlehem is the seat of the mother-of-pearl work manufacture, which it almost completely monopolizes. The shell used is brought for the large pieces, from the Red Sea. For the smaller pieces, such as beads for rosaries and chaplets the Austrian and German article is used. All the work is done by hand. No machinery is employed. Occasionally work commendable in an artistic sense is produced. The larger pieces are plaques, often representing groups from celebrated pictures, such as Leonardo da Vinci's "Last Supper," Nativities, Crucifixions, Resurrections, Madonnas, etc. The smaller pieces are in the shape of brooches, various articles of personal utility or ornament, crosses, rosaries, etc. A large amount of capital is invested in this and the olive-wood work business, both of which have a world-wide reputation.

IMPROVEMENTS IN JERUSALEM.

During the year about 3½ miles of streets have been paved. The number of houses finished was seven, while only nine new houses were built. The restriction as to building, to which I shall presently refer, accounts for the small amount.

The Russian belfry on the summit of the Mount of Olives has been completed, being capped with a pyramidal roof surmounted with a large gilt cross. This conspicuous structure, which exceeds 147 feet in height, dominates the landscape in all directions and is distinctly visible from the north shore of the Dead Sea. A chime of bells has been placed in it, among them the great bell from Russia weighing 24,000 pounds and measuring nearly 6 feet in diameter, and which, when every other means of transportation failed, was hauled up from Jaffa to Jerusalem and the Mount of Olives over the rough and difficult roads, at that time unimproved, by Russian pilgrims, largely women, chanting their hymns as they dragged it up. Another bell, also from Russia, weighing 47,000 pounds and measuring 6½ feet in diameter, has been placed in the

ruined tower of the basilica of Constantine, in front of the Church of the Holy Sepulcher. Those bells, when rung, fill the air with a wonderful tumult of sound.

The church erected to the memory of Her Majesty the late Empress of Russia, also has been completed. It is dedicated to St. Mary Magdalen, and stands on the slope of the Mount of Olives, just above the Garden of Gethsemane. Their imperial highnesses, the Grand Dukes Sergius and Paul, and the Grand Duchess Elizabeth, of Russia, were present at the dedication.

ROADS CONSTRUCTED.

The road to Hebron has been completed; so that now carriages can pass over a handsome macadamized road to that point from Jerusalem. With the exception of that part of the way crossing the plains of Sharon, the new road to Jaffa has been finished. A new road to Bethlehem also has been made, with the exception of about half a mile, still uncompleted, but which can be traversed in a carriage. These are all finely-built macadamized roads, which would be considered creditable in any country. They have been constructed, as usual, by the enforced labor of the peasants.

Roads have also been commenced from Jerusalem to Jericho, Ain Karim (the birth-place of John the Baptist), and Beit Djalla; also from Jaffa to Nablous (ancient Shechem). The last mentioned, it is expected, will be finished by the close of the year, and like the others is a fine carriage-way.

THE RAILROAD TO JAFFA.

The long-looked-for railroad from Jerusalem to Jaffa, after so many years of disappointment, seems at last about to become a realized fact. His Imperial Majesty, the Sultan has granted a firman for the purpose: This prescribes that the road must be commenced within six months and finished within three years, or else the money deposited as a guaranty shall be forfeited. One of our wealthiest bankers has left for Constantinople and Paris in order to form a company and complete arrangements. It is proposed that the railroad shall approach Jerusalem through the Plain of Rephaim.

COLONIES OF PALESTINE.

Colonization in Palestine, different from that in other countries, has chiefly for its incentive a religious motive. Americans have been the pioneers in this modern crusade, opening the way to the succeeding German settlers, who, in turn, were soon followed by the Hebrews.

American colony.—On August 10, 1866, thirty families of Americans, numbering one hundred and fifty-seven individuals, with about a dozen ready-made wood houses, furniture, etc., sailed from Maine, in the United States, for the Holy Land, and disembarked at Jaffa on the 22d of the following month. These "Restorationists," as they called themselves, looked for a speedy restoration of the earthly kingdom of Christ in Palestine.

They must have been considered by the local Ottoman authorities as a species of foreign invaders; for only on such supposition can we account for the really barbarous treatment to which these immigrants were subjected. Consigned to a plot of ground on the Sandy Beach outside of Jaffa, fenced in and crowded together like a flock of sheep in the open air, under the burning Syrian sun, watched by the police, and all communication with the people of the town forbidden, no language can describe the sufferings of those strangers in a strange land. Suffice it to say, that in six weeks of this inhuman quarantine they had lost twenty of their number, who died from climatic fevers, though all had been in good health on leaving the ship. Although the colony subsequently carried out its object, so far as to buy the ground necessary for the settlement and erect fifteen block houses, the majority of the colonists were utterly discouraged. The wealthier members returned to their homes in the United States, and the larger portion of the immigrants, conveyed in a ship sent for the purpose by the United States Government, followed their example within six months after having first set foot in Palestine. In November, 1868, but four families of the original colonists remained, determined to stay at any risk in the country of their adoption.

German colonies.—In 1868-'69, the Germans began their immigration into Palestine; but, taking a lesson from the experience of the Americans, came in gradually, preparing for the main body. They have founded colonies at Jerusalem, Haifa, Saron, and Jaffa; at the last mentioned place purchasing as many of the houses and premises of the nearly deserted American colony as could be recovered.

The Germans belong to a Christian sect known as the Templars, originating in Würtemberg, southern Germany, in 1854, and believing in the erection of the spiritual temple at Jerusalem for the worship of God by all the nations of the earth. Their

settlements, in a modest sense, may be called thriving. They are at least self-supporting.

Hebrew colonies.—These Christian efforts towards the colonization of Palestine were followed, in 1869, by a Jewish essay, resulting in the foundation of an agricultural school near Jaffa by the Universal Israelite Alliance at Paris, the protector of which is the Baron Rothschild. *Mikwa-Israel* (the Hope of Israel), as the institution is named, is calculated to become the seminary for the establishment of Hebrew settlements all over Palestine. By a firman of the late Sultan, 400 acres of the best land have been assigned to it, as a kind of fief; i. e., the land has been granted forever, and free of all taxes, on the payment of an annual fee of about \$340.

The persecution of Jews in Russia, and their expulsion thence in 1880, gave a remarkable stimulus to Hebrew immigration to Palestine. Hebrew immigrants flocked into its towns by thousands. For those who chose to be farmers, the Baron Rothschild has prepared some ten agricultural settlements. These are at different points throughout the Holy Land, and are named as follows: Rischon, Ekron, Imlebesse, Ghédérâh (Gadara), Castania, Zicron-Jacob, Géouné, Isbed, Yehoudich, and Wadi-Achnan.

Several of these settlements have entered extensively on the culture of the vine, orange, lemon, and other fruits and products of the soil; but so far can not be said to be self-supporting, as they depend more or less on liberal endowments and advances of the Alliance at Paris.

About twenty-five thousand souls, or half the population of Jerusalem, are Hebrews, the greater number of which are, to some extent, dependent on the charitable aid of their co-religionists throughout the world. During the last six years the Hebrew immigration to Palestine has been computed as reaching fifteen thousand individuals.

SICKNESS AND THE WATER FAMINE.

As already mentioned, largely owing to the scarcity of water the past season, there has been an unusual amount of sickness and mortality in Jerusalem and Palestine. Measles became, at one time, epidemic, and of a most virulent type, proving most fatal in the case of children, many hundreds of whom died from this disease in the city alone. In the outside towns and villages it was equally severe. The want of ordinary care and cleanliness has, no doubt, greatly contributed to produce the result. The number of deaths in Jerusalem during the year amounts to twelve hundred.

There never is a sufficient supply of water in the city. In ordinary seasons water sells generally at about 4 cents per goat-skin; but this year it cost from 8 cents to 12 cents per skin and was of inferior quality, and often could not easily be obtained at that. In such a state of things poor people must suffer. Each evening, during the rainless months, the poor went around with jars, begging the precious liquid; while, in many cases, offensive and impure water was used even for drinking. Horses and mules were given water once only instead of twice a day; and cattle and sheep were with difficulty provided with even dirty water, which had to be purchased for them. The dogs of the city were so devoured with thirst that, on finding a cistern open, they would plunge down into it, where not seldom they were drowned. The erection of new buildings was prohibited by the governor, in order to spare the use of water as much as possible; and, finally, a system was organized to bring in a supply from distant springs, which, though sold at a high price, partially helped to mitigate the distress.

The scenes which I myself have witnessed in some of the neighboring villages, at the almost exhausted springs and fountains, were painful in the extreme. One day in October, in passing through Lifta, the first village outside of Jerusalem, on the Jaffa road, I beheld the most pitiful sight of crowds of famishing men, women, and children struggling for water around the dribbling and nearly spent fountain. And I was assured that similar scenes to this, of which I was then a spectator, had gone on from morning till night for more than two months.

The setting in of the rainy season at the close of October, of course brought the longed-for relief from the worst phases of this distressing state of things.

SUPPLYING THE CITY WITH WATER.

It was impossible to pass through such an experience as I here have described without making some attempt not only to alleviate the present misery, but also to take such action as would, if possible, prevent, or rather counteract, so far as human measures can do so, the recurrence of its cause. The number of disused fountains throughout the city, which are now only receptacles for rubbish and filth, distinctly show that Jerusalem was at one time, and that within a comparatively recent period, abundantly provided with water. This was doubtless conducted by the aqueduct from Solomon's

Pools, where an abundance of water is still found. Tradition says this aqueduct was originally made by Solomon and reconstructed by Pontius Pilate. About two years ago this conduit, which had been suffered to get out of order so that it brought in little, and at length no water, was put into such a condition as once more to convey a small supply into the Mosque of Omar, the site of the Holy Temple. With proper repairs to this work, and the restoration of the various cisterns, reservoirs, and fountains of Jerusalem, so as to have means for storing up the supply for the dry season and against a time of drought, the desired end would be accomplished. Even more abundant means for gathering and preserving the rain-fall would contribute to a similar result.

With this object, of the greatest importance to the people of Jerusalem, I have used such influence as I possess to bring the matter to the knowledge of friends in a position to aid the work, and with most encouraging results. The press in America and Europe have warmly advocated the measure, and subscriptions have been taken on both sides of the Atlantic to carry out the object. Twenty-six years ago the present Lady Burdett-Coutts offered £30,000 for the purpose of supplying Jerusalem with water; but was frustrated in her benevolent design by various obstructions and objections. There would now be no such difficulty. All alike, whether Moslem, Jew, or Christian, favoring the project, and testifying that the work would be an incalculable blessing to the people, there can be no doubt the necessary sum would be granted.

DECLARED EXPORTS.

During the year ending September 30, 1888, the value of the declared exports from this consular district, consisting chiefly of mother-of-pearl work, olive-wood work, olive oil, wine, brandy, etc., is as follows: Quarter ending December 31, 1887, \$276.99; March 31, 1888, \$916.62; June 30, 1888, \$536.69; September 30, 1888, \$425.80; making a total of \$2,156.10.

JAFFA.

The town of Jaffa, the port of this consular district, has been, within the year, greatly improved by the erection of a good custom-house, with solid and spacious warehouses; in connection with which a substantial stone wharf has been constructed for the better accommodation of visitors to Palestine. The cost of the building amounted to \$30,000.

HENRY GILLMAN,
Consul.

UNITED STATES CONSULATE,
Jerusalem, December 13, 1888.

Value of declared exports from the Consular District of Jerusalem to the United States during the four quarters of the year ended June 30, 1888.

JACOB T. CHILD,
Consul-General.

UNITED STATES CONSULATE,
Bangkok, Siam, 1888.

THE PHILIPPINE ISLANDS.

REPORT BY CONSUL WEBB, OF MANILA.

Before presenting what is intended for my first annual report of the trade and commerce of the Philippine Islands it may be proper for me to poach upon the preserves of the historian and geographer sufficiently to show American merchants and manufacturers what kind of a field for business is to be found here. In order to do this effectively it may be necessary to carry this report out to what may be at first considered an unnecessary length, but to understand the commercial possibilities of a country one must have, at least, an idea of its distinctive features, the habits and needs of its people, the customs prevalent, and its natural products. These with other important features I shall endeavor to cover as briefly and concisely as possible.

Before leaving the United States, in November last, I searched among my own books, as well as among the remarkably extensive collection of the Public Library of St. Louis, Mo., for a description of Manila and the Philippine Islands that would give me a reasonably accurate idea of the country to which I was about to go. The most voluminous and graphic work I could find was written nearly one hundred and fifty years ago, and of course could not be taken as a guide to the islands to-day, to say nothing of the exasperating character of the typography, and the matter of modern date, including the various encyclopædias, I have since discovered was not strictly accurate in many important statements. I am forced to the conclusion, therefore, that American business men, as a rule, know comparatively little of the vast and populous territory embraced in the Philippine archipelago or of its commercial possibilities, and that they will gladly receive something more than a merely statistical statement of last year's trade and commerce.

I desire, also, to explain that the delay in making this report is due to the fact that the annual commercial report of the local government, upon which I have been compelled to rely for the major portion of my statistical matter, was not issued until the 14th instant, and the labor of preparing tables and reducing the quantities from kilograms to tons, and the prices from Manila silver to American gold, has occupied the major portion of my leisure time since then. However, the enforced delay has given me an opportunity to become better acquainted with the country and its people, and I can write more confidently and accurately than I could have done six months ago.

Spanish is the official language, and is practically the only language spoken.

Those American business men who desire to extend their trade to this particular part of the world should understand at the outset that a knowledge of Spanish is indispensable, and that they will greatly advance their interests here if they conduct their correspondence in that language, unless it is addressed to the one American or five or six English houses, and even in those all the employes speak Spanish. A better idea of the situation will be obtained from a knowledge of the general character of the population. From the most reliable statistics obtainable there are in Manila 11 Americans and 250 Europeans, exclusive of Spaniards, perhaps 100 of which number are English, the other 156 being Germans, Italians, French, etc. It is possible that there are 125 persons who speak English, and against them are 6,189 Spaniards, 20,157 Chinese, 46,066 Chinese Mestizos, 13,849 Spanish Mestizos, and 513,489 natives, all speaking Spanish except a small percentage of natives, who speak only Tagalog, Pangasinan, Visayas, or other native dialects. As soon as a Chinaman arrives he immediately sets to work to learn Spanish and Tagalog, and with the help of his fellow-countrymen, who have already learned these languages, he soon knows enough to begin trading or usurping the functions of a dray-horse. It is quite unusual to hear English spoken, except in the homes of the English and Americans or in the business houses of that nationality.

GEOGRAPHICAL AND HISTORICAL.

The Philippine Islands are situated between latitude $5^{\circ} 32'$ and $19^{\circ} 38'$ north, and longitude 117° and 126° east. The islands are bounded on the north by the Pacific Ocean; on the south by the South China Sea; on the east by the Celebes Sea and Borneo, and on the west by the Channel and Island of Formosa. They form a Spanish colony and comprise over five hundred islands, some of which have never been explored, having an area of about 52,647 English square miles. The total population, as given by the census of 1883, including the Spanish army and navy, was 7,636,632, but these figures, it is believed, do not truthfully represent the whole number of persons who exist on the various islands. As stated above, some of them have never been fully explored and on others it is extremely dangerous for a white man to set foot. There are also parts of the island of Luzon,

which island has probably the largest civilized population of any one of the archipelago, where white men never go. In some of the mountainous parts the savages are still unsubdued, and, I am told, hate the Spaniards with all the intensity of their fiery untamed nature, and being unable to distinguish between a Spaniard and any other nationality of pale-faced men foreigners seldom enter those districts. It is generally believed that if a white man should penetrate into the wild parts of some of the islands he would never return. It is quite certain that white men seldom or never go very far from the outskirts of civilization unattended by a native. I know an American who has lived in the Philippines for about thirty-five years, who is married (to all intents and purposes) to a native woman, and speaks fluently Tagalog and Visayas as well as Spanish. He has probably gone as far into the interior as any white man, but he frankly admits that there are places where he would not dare to go, knowing that a white man would be promptly killed on sight. Under these circumstances it is impossible at present to secure a true census of the population.

The principal islands are divided into twenty-seven provinces, thirteen of which are on the Isle of Luzon; four on the Isle of Negros; three on Panay, and four on Mindanao. Each of these islands has its governor and each province and district has its "gobernadorcillo" or sub-governor. The principal cities and shipping ports, and the only ones that do any foreign trade, are Manila, on the Isle of Luzon; Iloilo, on Panay, and Cebu, on the island of that name.

It would be supererogation for me to attempt to more than briefly allude to the early history of the islands. It is given in various forms in different works and those who are anxious to ascertain how widely some historians may differ in their statements of what are chronicled as historical facts should consult the encyclopædias and other published records. It is a reasonably well-established fact that the islands were formally annexed to the crown of Spain, in 1565, and that for many years that nation had its hands full in its efforts to hold on to them. Not only was there continual trouble and conflict between the civil and ecclesiastical authorities on the inside, but, on the outside, Portugal and the Netherlands, feeling that they never would be really prosperous until they had acquired possession of the rich and valuable property, were making the most annoying and harassing efforts to accomplish this end. Attacks were also made by powerful Chinese piratical fleets, and in 1762, while Spain was very busy attending to all these troublesome elements, the English stepped in and captured Manila, which they held for two years and then returned it to Spain in consideration of a ransom of £1,000,000. This ransom, however, was never paid.

An English writer says that "England never exacted the payment," but he does not say why Spanish historians give the impression that Spain, having disposed of some of its most urgent business toward Manila, and that England, concluding that that city was not such a wonderfully desirable piece of property after all, abandoned it. Between the two records the truth may perhaps be found.

THE CIVILIZED NATIVES.

Soon after the discovery of the islands, Roman Catholic missionaries flocked to them in large numbers, and the work of converting the natives was carried on with great vigor. It was a most excellent field for these self-sacrificing and earnest men, for they found the natives religious by nature and ready to adopt the first attractive form of worship that came to them.

To-day all the civilized natives are Catholics and no other religion has any declared representation nor place of worship on any of the islands. They are most devoted adherents to their church, and one has but to go about any of the cities or towns during Lent, Holy Week, or any other religious festival to become impressed forcibly with their earnestness and loyalty to the priesthood. The pure native has a strong element of soulfulness in his nature that manifests itself in love of music and an inclination toward the forms and ceremonies of religious worship, and while, as a rule, he has no capacity for money-getting or the ordinary duties of life, he never neglects his prayers nor fails to lift his hat and bow reverently when he passes a church or wayside altar. Unquestionably the church has done much good for the natives, as it has raised them from a condition of savagery and vagabondage to a fair degree of citizenship, and the clergy, who now number nearly 2,000, I am told, have a hold upon their affection and loyalty that no civil power can disturb.

But despite all the civilizing influences brought to bear upon them, the majority of the natives cling to many of their half-savage customs and practices. For instance, they have no idea of the use of knife, fork, or spoon, but squat upon the floor of their nipa huts and eat with their fingers, just as their ancestors did centuries ago. They sleep on the floor or earth on thin mats of woven strips of bamboo or a fibrous plant of the lily family, and only remove their clothing in the morning to wash themselves, which they do by taking a pail of water and pouring it over their heads. The ordinary dress for a man is a thin muslin or gauze shirt and a pair of short, baggy trousers of

the same material. He doesn't mind having his clothing wet, for the air is generally warm and he can dry himself in the sun at almost any time. His food is rice and fish, generally, but of late years many of the natives have followed the example of Europeans and eat meat when they can get it. Of course, this description applies only to the middle and lower classes of natives; there are many who have attached themselves to European households and business houses who, although they still eat with their fingers, dress quite tastefully, and are very neat in their outward appearance.

DRUNKENNESS.

Drunkenness is the rare exception among the natives, and although there are more than half a million of them in Manila and its suburbs, I have not seen one under the influence of liquor in any degree since I have been here. Although the majority of the Europeans drink wine, liquor, and beer freely, the natives do not yet seem to have acquired the habit to any extent. Strong drink is sold openly on almost every street.

UNCIVILIZED NATIVES.

As I have said before, there are a number of unsubdued tribes in various parts of the archipelago who still refuse to recognize the Spanish Government or pay tribute to it, but the latter, instead of resorting to force, which would be followed by a great deal of bloodshed and no really beneficial results, is pursuing the wise policy of gradually bringing the recalcitrant or rebellious leaders into the church and impressing them with the wisdom of graceful submission to the dominant authority. Less than four months ago two petty chiefs were baptised and taken into the church with unusually impressive ceremonies, and it is reasonable to suppose that at least the majority of the members of their tribes will soon follow. It is apparently only a question of time when every native in the entire archipelago will pay tribute to Spain and worship devoutly before a Catholic altar.

The last census returns show the number of natives not subject to the civil government, and paying no tribute, to be 602,853, but how the census-takers obtained these seemingly exact figures I can not imagine, when, as I have shown, white men are not permitted to invade the mountainous districts where these people live. From reports that have reached me I am inclined to believe that the figures are too small and that the census-takers have enumerated only those who were approachable by the civilized natives. It is said among the incorrigibles that the natives who have submitted to civilization are in quite as bad odor as the white man; that their wild brothers are ashamed of them and will have nothing to do with them. But there are tribes who are, apparently, "on the fence" as it were; who are ready, under slight provocation, to topple over into civilization or back into extreme savagery, and who receive their civilized brethren with some show of cordiality and hospitality. These are probably the ones counted by the census-taker.

But these unfriendly tribes have one redeeming quality—they are not aggressive and never attempt to raid their civilized neighbors. They are quiet and peaceable until their haunts are invaded, when they promptly and vigorously resent the intrusion. I am told, also, that at stated times they will trade with Chinese peddlers, but will not allow the latter to approach near them. The peddler deposits his pack at a designated spot and walks away to a considerable distance while the Indians come forward, take such goods as they want and leave in payment various rare gums, fine woods, leaves, roots, plants, etc., which the peddler can dispose of in the cities at an enormous profit. There is an exhibition of mutual confidence in these transactions that is exceedingly beautiful in these degenerate times. The Indians seem to be very honest and liberal, and the peddler is generally well satisfied with what he finds on his return to his pack.

THE NATIVES AND THE CHINESE.

The number of natives paying tribute is 5,501,356. The number of *Mestizos*, Chinese, and Spanish, as shown above, is very large. The Chinese and natives affiliate quite readily, although there is a manifest disposition on the part of the latter to treat their almond-eyed neighbors rather contemptuously. This feeling is due, to some extent, to the fact that the Chinaman makes money readily and rapidly, and knows how to keep it, while the native has not the remotest idea how to do either. The Chinaman always has money and the native is in a chronic condition of impecuniosity. Then the Spaniards look upon John very much as the Californians look upon him, but he is very numerous and pays heavy taxes, and no attempt, of late years, has been made to drive him from the islands. Of course the natives share this feeling with the Spaniards and are inclined to sneer at and snub

him. But possibly the most potent reason for a feeling of superiority on the part of the native is that he is a Catholic and John is a heathen.

But John, apparently, does not notice the attitude of the natives toward him, for he courts their friendship and treats them as if he felt that they were every bit as good as himself. He has been marrying the native women for the past seventy-five or one hundred years and the mixture of the races has produced some very handsome women and excellent quality of men, the latter being finely formed, robust, enterprising, and honest, as a rule, having the industrious, frugal traits of the Chinaman and the simple honesty and affectionate disposition of the native.

It is generally supposed that the native women seldom marry Chinamen voluntarily, although such marriages are frequent, and that the latter use strategy in order to obtain the coveted wives. The operation is something like this: John falls in love with a dusky maiden and reaches the conclusion that she is the proper person to do his cooking and make his clothes for the rest of his life. He has very little trouble in securing permission to call at her father's nipa hut, and if she receives him in a friendly manner and encourages him to call a second time her fate is sealed. He gives her at first an inexpensive present, merely as a matter of courtesy, and subsequently follows it with something a little more valuable. Just a little inclined to covetousness she accepts his gifts until she has accumulated \$50 or \$100 worth, or more. Then John proposes, but is indignantly refused. But that doesn't disturb him in the least—he expected it. He goes away smiling contentedly, and the next day calls around with a larger smile and a bill for all the presents he has given his victim. Of course, she can not pay it, for the whole family probably never had more than \$10 at a time in their lives, but she generously offers to return his presents. These he does not want as they are now second-hand and have depreciated in value; he wants the money, but will compromise the matter if she will marry him. This, she declares, is impossible as he is not a Catholic, and no priest would consent to solemnize such a marriage. This obstacle is easily surmounted by his promptly offering to join the church and be as good a Catholic as anybody. There is no escape for her; she knows that a lawsuit will follow if she refuses to marry him, so she makes the best of the situation and consents. He applies in proper form for admission to the church, is baptized, and after the expiration of the proper time is regularly married to his choice. As a rule he makes a good husband, and the girl has little cause to regret having been confided into matrimony. Of course, no celestial who contemplates a return to his native land in the near future ever takes a step of this sort, but when he does he usually settles down to pass the remainder of his days here. It is rumored that cases have occurred in which Chinamen have deserted their native wives after a few years and have returned to China and the religion of Buddha or Confucius, but I have never heard of a well authenticated instance of this kind.

THE PUBLIC REVENUE.

The total public revenue of the Philippines for 1886 was \$11,528,178 in Philippine money. Of this amount \$6,262,738 was from direct taxes; \$2,176,500 for customs duties; \$1,254,400 from monopolies, and \$525,000 from the government lotteries. The total amount of revenue stated does not include the special tax for the new harbor works now in course of construction in Manila Bay. This very important work I will describe in detail further on.

THE CURRENCY.*

The amounts given above are in the Philippine dollar, or peso, which is usually worth from 80 to 85 cents, American gold. The condition of the local currency is, and has been for a number of years, most unsatisfactory to business men throughout the islands, and particularly so to strangers temporarily sojourning here. The coins in circulation are the Spanish peso, the Mexican dollar, the Spanish half-peso, two reals (25 cents), peseta (20 cents), real 12½ cents), half-peseta (10 cents), half-real (6½ cents), and “dos cuatros,” the latter a copper coin worth 2½ cents. All the other coins are silver, there being no gold in general circulation. There are a few bank bills in circulation issued by the Spanish bank, but they are not plentiful. There is also a smaller copper coin called a “cuatro,” and worth 1½ cents but it is seldom seen.

Not only is the currency much depreciated, but its value fluctuates frequently and is most exasperatingly uncertain. The importation of Mexican dollars is prohibited by law, and any brought to the islands are liable to seizure by the Government, while the person who brings them in is subject to fine or imprisonment, or both. Yet there are many more Mexican than Spanish pesos in circulation. In 1877 the Government declared all Mexicans contraband, except those in circulation in the Philippines at

* Throughout this report the consul has estimated the Philippine or peso dollar at 83 cents in reducing values to American dollars.

that time. The avowed object was to ultimately withdraw this coin from circulation entirely, leaving nothing but the Spanish peso and smaller coins, and giving the whole volume of the currency a certain and unchanging value. There were a large number of Mexicans then in circulation, and as it would have been hard to their possessors to have depreciated their value at once, they were allowed to circulate at par with the peso. The decree failed, however, to effect the desired result, and Mexicans continued to pour into Manila and the other ports quite copiously, notwithstanding the rigid preventive measures adopted by the customs officials. Shrewd travelers and speculators found it quite profitable to bring Mexicans into Manila from Hong-Kong, for they were worth from 10 to 15 per cent. more here than at the latter port, and all kinds of stratagems were resorted to in order to deceive the watchful customs officials. Whenever a smuggler was caught in possession of a small amount of the contraband coin he pleaded ignorance and innocence, and escaped with only the loss of his Mexicans; but if the amount was large enough to warrant the conclusion that it was a clear case of smuggling, he not only lost his Mexicans, but was compelled to pay a heavy fine besides. Not long since a steamer plying regularly between this port and Hong-Kong was fined \$500 for having Mexicans on board.

On the 19th of July, 1886, another decree was issued from Madrid, instructing the government of the Philippines to rigidly enforce the order of 1877 and rapidly withdraw all Mexicans from circulation. It was again declared, however, that Mexicans dated 1877 and prior to that year would be allowed to circulate only until they could be withdrawn together with those of subsequent dates for the purpose of re-coining them into the Spanish half peso. It has been asserted, by the way, that this coin contains 10 per cent. less silver than the Mexican, owing to shrinkage and the presence of alloy; but two of them will buy a dollar's worth of goods quite as readily as a Mexican. Of course, upon the receipt of the second decree the government officials here became more vigilant than ever, and it was hoped and expected that the unwelcome Mexican would soon be frozen—or melted—out of circulation; but notwithstanding all the precautions taken it continued, and still continues, to pour in. None of a later date than 1877 are accepted in trade, but that and earlier dates still circulate at par with the peso, which is comparatively scarce. The same conditions favorable to making money by smuggling Mexicans still exist, and I have been told that a man who left here several months ago made over \$20,000 in about four years by getting this coin at 70 and 75 cents in Hong Kong and realizing 80 and 85 cents for it in Manila. My information in this case, however, is not reliable, and I present the incident only as a possibility.

The quite natural result of all this is that the currency is in a very unstable and unsatisfactory condition. Merchants here who buy goods in America must of necessity pay a high rate of exchange, as all transactions must be upon the basis of American gold. Mexicans, which are quoted by the United States Treasury Department at 75.09 cents, are accepted at par with the Spanish peso valued by the same authority at 96.15 cents, while both are worth from 15 to 20 cents less than the United States gold dollar. There seems to be no immediate prospect of a change for the better, as the Government appears to be unable to keep the Mexican out or to get the currency upon a substantial basis.

CLIMATE.

The climate of the Philippines varies comparatively little from that of other tropical countries, and the high death-rate in the cities is due undoubtedly more to the very unfavorable sanitary conditions prevalent than to climatic influences. To the foreigner who walks about Manila it is at once apparent why the cholera and other contagious diseases are so fearfully destructive when they obtain a fair start here. The thermometer ranges from 60 to 90 degrees the year round, and remains steadily about the latter figure during March, April, and May. During those months the heat is very oppressive, and during the middle hours of the day everybody and everything seems to sink into a lethargy fully awake only after sunset. Owing probably to the humidity of the atmosphere the heat is much more oppressive and enervating than a corresponding degree would be in the United States.

In June the rainy season begins, and it drizzles and pours almost continually until about the first of December. The rivers and creeks overflow their banks and the fields and streets and roadways are inundated sometimes to the depth of from 2 to 4 feet. For six months traveling in the interior is almost impossible, and in the cities everything is wet and moldy, the houses are damp and dismal, and the people are depressed and gloomy. Trade becomes comparatively lifeless, amusement and recreation languish, and a disagreeable funereal settles upon everybody and everything. The floods in the fields and gardens drive the snakes, centipedes, and other venomous creatures into high places, and they even find their way to the second stories of dwellings, much to the terror and disgust of the inmates. Most of the reptiles and vermin of the country are forced out in the rainy season, and of course are ruthlessly slaugh-

tered whenever found. Only a day or two since, while the streets were flooded, I saw a native wading along the side walk with a water snake in each hand, whose young lives he had sacrificed by seizing them suddenly by the neck and pressing his thumb strongly behind their jaws. To the student of entomology and natural history the rainy season offers wonderful opportunities, but it is not pleasant for the ordinary every day citizen. The maximum annual rain-fall is 144 inches and the minimum 84.

About the first of December the cool season sets in, and lasts until about the first of March, during which period very little or no rain falls; the nights and early mornings are refreshingly cool and pleasant and the whole face of the country, densely clad in tropical verdure, is very beautiful. During the day, or from about 9 a. m. to 4 p. m., the thermometer sometimes strikes the nineties, and white people remain as much as possible in the shade, but between 4 and 5 o'clock p. m. a strong breeze almost invariably springs up from the China Sea and blows for three or four hours quite briskly, when it gradually subsides, and for the rest of the night all those charming conditions prevail which poets so graphically ascribe to the tropics.

Not infrequently during the cool season long droughts prevail which parch the ground and destroy the crops; and locusts occasionally make a descent upon a province, denuding it entirely of herbage, but this, I infer, does not occur very often. As a rule the crops are good.

TYPHOONS.

The Philippines are within the typhoon belt, and most terrific wind-storms sometimes accompany the rain in September, October, and November. In July and August the careful native anchors the roof of his nipa hut by lashing together with rattan thongs the small ends of several heavy bamboo poles, and placing them astride of the ridge, while he pins the larger ends firmly to the earth. Similar precautionary measures are taken also by the occupants of some of the larger houses where the roofs are not securely bolted to the rafters, and a threatening cloud in the typhoon season is generally looked upon with grave apprehensions. But after November no damage from wind is feared.

EARTHQUAKES.

Most of the islands of the archipelago have been badly shaken up by subterranean disturbances at various times, and the natives and older residents seem to live in a continual state of fear whenever the active volcanoes are less active than usual. These are popularly supposed to be the outlets or escape valves for the gases generated by fierce subterranean fires, and so long as they are belching forth smoke and lava at the usual rate it is felt that there is comparatively little danger of a violent disturbance; but when they become partially or completely inactive the people at once conclude that the craters have become clogged and that an outlet for the gas will be forced open at some other point, which action will be preceded by a violent earthquake.

There are traditions of terrible "terremotos," as the Spaniards call them, that have overturned mountains, filled valleys, desolated extensive plains, opened passages from the sea far into the interior, and from the lake to the sea. One is recorded as having taken place in 1796 which was fearfully destructive of life and property. In 1824 one of the most violent earthquakes that ever afflicted the islands is said to have occurred. It completely wrecked several churches, the principal bridge across the Pasig River and the barracks at Manila; destroyed many private houses all over the archipelago, and opened a narrow chasm in the earth nearly four miles long. The inhabitants fled in terror to the open fields, but hundreds were crushed to death under falling buildings. Six vessels were wrecked in the harbor and an incalculable amount of general damage was done. The number of the dead was never ascertained.

In 1845 the old city of Manila was almost entirely destroyed and over 300 lives were lost. During an earthquake in 1828, it is said, the vibration of certain hanging-lamps described an arc of $4\frac{1}{2}$ feet, the huge corner-stone of the principal gate of the city was displaced, and the great bells of the churches were set ringing. The shock lasted between two and three minutes, and rent the walls of several churches and other buildings, but was not accompanied by subterranean noises as is usually the case.

In 1863 and 1880, memorable earthquakes occurred, the former destroying the greater part of Manila, and the latter making almost a complete wreck of it. Those who have figured upon the record feel that a violent shock may be expected quite regularly about every seventeen years, and that the next may be looked for in the summer of 1897.

It is quite generally believed that this archipelago was formed by volcanic upheavals, and there is no lack of evidence in various parts of it to support this theory. I have been assured that there are portions of the mountainous districts of this island (Luzon) where a perceptible tremor of the earth is going on at all times. Slight

shocks are felt very frequently, and since the 1st of January I have felt three very strong vibrations. I have heard an American complain of being made "sea-sick" by the motion of the earth.

MANILA.

Manila is the chief city of the Philippines and is situated on the north shore of Manila Bay, spreading over a comparatively level tract of land for about 2 miles north and 4 east and west. I refer, of course, to what is now known as Manila, and not to the walled city alone, which is located on the east bank of the Pasig near its mouth and overlooking the shore of the bay. Old Manila, which was founded in 1671, is compactly built, covering about three-fourths of a mile square, and is inclosed by a massive stone wall 10 or 12 feet high and about 6 feet thick. It has five or six great gates, each named after a Spanish king or queen and each having an old-fashioned draw bridge over the broad moat which surrounds the wall. The latter has a very ancient appearance, being covered in many places with thick moss and heavy shrubbery, and its general aspect suggests tales of the Middle Ages. It looks like a mediæval castle, somewhat musty and decrepit but still on duty. At the southwest corner of the wall is an ancient fort which, with several lines of earthwork along the shore of the bay, forms the protection to the harbor and mouth of the river. But while the old city is still called Manila the districts of Binondo, Santa Cruz, Quiapo, San Sebastian, San Miguel, Tanduay, Sampoloc, Santa Mesa, Santa Anna, Malate, Ermita, and a number of others are considered as forming the whole city of Manila. Each of these districts is about the size of one of New York's lower wards and they merge so completely into each other that there are no distinguishable dividing lines. It seems as if a number of villages had gradually grown until they melted into each other and formed a city, still retaining their old names, however, and becoming districts instead of villages. Each district has its chief executive officer or "gobernadorcillo," and the whole city is presided over by a civil governor and what may quite properly be called a board of aldermen. The head of the general government of the archipelago is a governor-general, who has his palace in the Malacañan district, Manila, is appointed by the Queen Regent of Spain, and holds his office for three years.

Manila lays no claim to architectural beauty, but it has a number of very pretty streets and drives, notably Malecon, a well paved boulevard extending about a mile along the shore of the bay in front of old Manila; the Lunetta, an oval-shaped drive about a mile in circumference into which the Malecon boulevard merges and in the center of which is a handsome stand, where a fine military band gives free concerts every pleasant evening all the year; and the Calle Iris, a level gravel road 75 feet wide and lined on either side with bamboo trees, running from Sampalac to Tondo, a distance of about a mile and a half. The dwellings, although strikingly large and roomy, are built with special reference to safety during earthquakes and typhoons. As many posts or beams, from 6 to 12 inches in diameter, as are required are planted with one end deeply imbedded in cement and stone underground and extending to the roof of the house, the latter, as well as the floor supports, being firmly bolted to them. The houses are only two stories high, the first, the floor of which is level with the street, being usually devoted to a stable, carriage-house, and servants-quarters, although occasionally a first floor room is used as a dining-room. The second floor is essentially the residence. The outer walls of the first story are usually built of stone, while the second is always of wood, with sliding panels for windows, rendering it possible to throw open the entire upper part of the house in warm weather or close it tightly during the cool and rainy seasons. These panels, instead of glass, have square pieces of transparent shell set into the light frame-work, letting in plenty of light when the house is closed.

The walls and ceilings have neither lath nor plaster to drop on one's head when the house is being racked by an earthquake, but are covered with sheets of woven bamboo, grass, or muslin, upon which very pretty designs are often painted in water colors. The house is so constructed that if an earthquake shakes the first floor wall from under it, the upper story, where the family sleep and eat, will be supported firmly by the upright beams described. This idea may, perhaps, be profitably applied by the builders of Charleston, S. C., and other earthquake-shaken cities. It would require the best efforts of an unusually able-bodied typhoon to more than unroof one of these structures.

Since the last earthquake a number of handsome churches have been built. The Santa Yglesia Cathedral in old Manila, first built in 1578, has been destroyed by earthquakes several times, and did not escape in 1663. In 1880 it was badly shattered, and its tower had to be pulled down. To-day its interior, with its vast flooring of tessellated marble, its grand and massive arches and pillars, its pure white marble altars, rich in gold and silver ornamentation, and its immense organ presents an appearance of substantial elegance and solidity not at all suggestive of fear of earthquakes. The Cathedral of San Francisco, also in old Manila, is a very handsome

structure, gorgeously furnished; and each district of the city has its church, the greater number being substantially built and richly decorated. An iron church is now in course of erection in the district of San Sebastian, the entire frame-work having been imported from Germany, and it is expected that it will be a magnificent edifice.

MANILA BAY.

Manila Bay is 27 miles wide and the anchorage is about 3 miles from the mouth of the Pasig River which will not admit vessels that draw more than 13 feet. The principal shipping houses are fully half a mile from the mouth of the river, and nearly all the goods shipped are taken down the river and out to the ships in lighters, propelled by natives with long bamboo poles, or, in some cases, towed out by steam-tugs. When the monsoons blow strongly the bay is very rough and lighters can not be taken alongside the ships. Thus shipping is sometimes at a standstill for a week or ten days at a time, and even the tugs of the ship-chandlers do not go beyond the mouth of the river. All this trouble, it is expected, will be overcome when the Government finishes the extensive harbor improvement now under way. This is simply a massive stone pier or breakwater, extending about a mile southeast from a long pier running out from the mouth of the river, and forming a large harbor where ships of heavy draught can tie up to stone docks or ride quietly at anchor in rough weather. The undertaking is a gigantic one and it will require many years to finish it. To pay for the work a tax of 2 per cent. is levied on imports, 1 per cent. on exports, tonnage dues, and a tax on fishing boats. Over \$4,000,000 have already been collected for the work and it is expected that it will be rapidly pushed to completion. The harbor is certainly needed very badly and will undoubtedly cause a marked increase in the commerce of Manila.

The river Pasig, which divides the city of Manila in two almost equal halves, is less than a quarter of a mile wide and presents a scene of great animation at all times with the numerous native craft gliding hither and thither, among which may be seen an occasional small ship or steamer of foreign build.

The passport system is rigidly enforced, and no one can leave the port nor enter it without having supplied himself with one.

THE POLICE OF MANILA.

The police force of Manila is composed of natives with Spaniards as chief, captains, and lieutenants, and is exceedingly well organized. The low average of crime in Manila is most surprising. Here is a city with a declared population of over half a million, the majority of whom can neither read nor write, and yet during the year there is hardly any more crime than in an American or European town of 5,000 inhabitants. The vast majority of the arrests made are for very slight misdemeanors, and a murder, burglary, highway robbery, or serious assault is of very rare occurrence.

There seems to be a generally prevalent feeling of security, and it is not considered necessary to take extensive precautions against "midnight mechanics." I have been here nearly eight months and have seen but five men who were at all under the influence of liquor. One was a Spaniard, three were English sailors on shore on leave, and the fifth was a French sailor. The natives are just learning to drink, but have not acquired confidence enough yet to become intoxicated, and the Chinamen never get drunk.

No one ever hears of citizens being knocked down and robbed, and I have heard of but one burglary since I have been here. Immorality may prevail to a certain degree, and I have been assured that it does, but it certainly does not appear upon the surface of daily life. Apparently the city is a model of morality and good order.

MANILA NEWSPAPERS.

There are five daily newspapers published in Manila, all printed in Spanish: "El Diario," "La Oceania Española," and "La Opinion," issued in the morning, and "El Comercio" and "La Voz de España" in the afternoon.

AMUSEMENTS IN MANILA.

One of the leading amusement features of the year are the spring races, which are attended by everybody who claims to be anybody. Admission is charged only to the grand stand, and as the surrounding fields are free the natives gather there by thousands. The course and fields present a very animating sight.

There are several theaters where plays are sometimes given by amateurs, but none of them are open regularly. Occasionally an opera company comes from Spain or

Italy, remains here two or three months, and goes away well laden with silver. A circus came here once, I am told, and remained here a month, the canvas being hardly large enough to hold the crowds.

STREET CARS IN MANILA.

In September last the first street car line in Manila was opened for business. The project has proved exceedingly profitable, although predictions were made freely that it would be a complete failure. One of the reasons why it was generally felt that the line would not pay was that every one who has any social status whatever owns one or more conveyances of their own. It is not considered the proper thing for a white man to walk unless he does it for exercise and has his carriage within call, and I am told that there are families who live very plainly, even shabbily, at home, and whose credit with the retail dealers is not good, and yet who appear on the streets in quite decent carriages with coachmen and all the necessary appurtenances for a creditable show. There are rumors, too, of instances where men of small incomes, after having made their appearance on the drives early in the evening, send their carriages out to pick up passengers for two or three hours to pay feed bills and coachmen's wages. With all the white people owning their carriages and the natives and Chinamen able to ride anywhere in the numerous two-wheeled one-horse "caromatas" for 5 cents, the outlook for a street railway project was not considered encouraging.

The line begins at the fountain in the little plaza at the head of the Calle Alixe, in Sampaloc, runs south through the Plaza Santa Anna in front of the United States consulate, into and through San Sebastian, Quiapo, Santa Cruz, and the Escolta, west through the Rosario, and terminates at the church in Binondo, covering a distance of about 2 miles over a single track, with short side-tracks at intervals to allow the cars to pass each other.

The fare was fixed at 6 cuatros ($3\frac{1}{2}$ cents) for first-class passengers and 4 cuatros ($2\frac{1}{2}$ cents) for second class. This was cheap enough for anybody, and the natives and Chinese at once began to desert the "caromatas" and patronize the street cars most liberally. The difference between the first and second class accommodations was that the former had cushioned seats in the middle of the car while the latter were standing-room in the front and rear.

The cars are very cheap and rather shabby looking affairs when compared with the handsome American street cars, but answer the purpose quite well. They were built in Germany, largely of sheet-iron and rough boards, and are painted a dingy red and yellow. At either end is a small, square inclosure just large enough for the driver to stand in, and at each side of this are two very awkward steps. Each car will seat twelve or fourteen first-class passengers and will furnish standing room for fifteen or twenty second-class standing closely together.

At first the patronage was confined almost exclusively to natives and Chinese, but gradually it began to dawn upon the clerks and business men along the line that it was a great deal handier sometimes to jump into a car and ride smoothly down town than to wait for their horses to be harnessed and then to be jolted over the rough pavement. Then it was soon understood that a man did not jeopardize his social position by riding in a street-car, and one by one they dropped into the habit as readily as Americans; and now in the morning and evening hours there may be seen in the street-cars English, Spanish, and German merchants, clerks, and occasionally ladies, who seem to enjoy the novelty of such a ride.

Patronage increased rapidly until the fifteen cars with which the line began operations were found insufficient and two more were added; not, however, the dingy, unsightly German ones, but two handsome specimens of the work of J. G. Brill & Co., of Philadelphia. But it proves rather expensive to bring street-cars from America. I am told that the price paid for each was \$400, and that the freight and other expenses amounted to nearly \$600 each. Still, the new cars are so much more attractive and acceptable to the public that I have no doubt more will be imported and that the old ones will be gradually retired.

THE CITY OF ILOILO.

Iloilo is 250 miles southeast of Manila and is the next city of importance in the archipelago. It is the chief city of the province of Iloilo in the Isle of Panay, latitude 10 degrees 48 minutes west, near the southeast extremity of the island, close to the sea on the border of a narrow channel formed by the opposite island of Guimaras. The city is built on low, marshy ground, partly fronting on the sea and partly along the left bank of a creek or inlet which runs towards Iaro and after describing a semi-circle again meets the sea near Iloilo. The harbor is well protected and the anchorage good, the island of Guimaras forming a sheltering passage where heavy draught ships may anchor comparatively well protected from heavy seas. The depth of water

on the bar at the entrance to the river is about 5 fathoms at low water and a short distance inside decreases to 15 feet, deepening again a short distance farther in. During the spring tides the town is flooded; but, notwithstanding the apparently unfavorable sanitary conditions, it is said to be a much healthier place than Manila. A striking peculiarity of the location is that the high ground of Guimaras forms a sort of funnel with the Panay shore and a calm at Iloilo is of rare occurrence. There is almost always a strong breeze there, and when it comes from the northeast it is very heavy. It is, of course, much cooler at all times of the year than in Manila. It is here that the famous "pina" fabric, woven very finely from the fiber of the pineapple leaf, is made. Another very rich fabric called "jusi," woven from silk in white and colors, is also made here. The surrounding country is very fertile and is comparatively well cultivated, but under the direction of experienced, energetic farmers the yield could undoubtedly be increased incalculably. Sugar is the principal product of this portion of the archipelago, and the annual crop, it is estimated, averages about a million piculs, or nearly 70,000 tons. Tobacco and rice are quite largely cultivated; but none of the latter is shipped and very little of the former, as compared with the shipment of this article from other ports. Earthquakes seldom occur on the Isle of Panay, but it seems to be a special mark for the typhoons, which quite frequently do great damage there. The principal traders are Chinese *Mestizos*, although there are three Americans and a number of German and English traders there.

The Isle of Negros, which is extremely fertile, now contributes about three-fourths of the sugar shipped from Iloilo. The quality is said to improve every year.

THE CITY OF CEBU.

This is the third city of importance in the Philippines, is noticeably well built, and has fine roads, but is lacking in commercial enterprise. This is the leading center for hemp, the neighboring islands of Leyte, Mindanao, and Camiguin having very extensive plantations and sending the greater part of their products to Cebu for shipment. There is said to be coal on the island, but no one seems to care to take the trouble to mine it. Cebu was at one time the seat of the administration of revenue for the whole of the visayas, but this was removed to Manila in 1849.

FOREIGN TRADE.

The foreign trade is confined to Manila, (which is, of course, the leading port) Iloilo, and Cebu, and the principal articles of export are hemp and sugar. Large quantities of tobacco, coffee, indigo, hides, and ylang-ylang are also shipped, as well as some fruits and gums. But the really prominent features of the export trade are hemp and sugar. The total amount of these products shipped last year was 81,999.1 tons of the former, and 188,929.67 tons of the latter; 45,462 tons, or more than half the hemp, went to the United States, and 123,655 tons, or nearly two-thirds, of the sugar.

The following table will show the total amount of hemp and sugar exported from the Philippines during the past seven years:

Year.	Hemp.	Sugar.
	<i>Tons.</i>	<i>Tons.</i>
1881	34,381	89,725
1882	24,776	83,197
1883	24,809	157,504
1884	23,400	95,603
1885	26,982	153,094
1886	24,828	143,881
1887	45,462	128,685
Total	206,638	846,679

HEMP.

The receipts of hemp at Manila in 1887 were 468,911 bales, against 342,015 bales in 1886 and 362,024 in 1885. At Cebu, the next important hemp port, the receipts were 65,764 bales against 60,693 in 1886 and 61,105 in 1885.

The stock afloat and in store on the 1st of January, 1888, was: At Manila, 63,023 bales, against 51,782 in 1887 and 28,914 in 1886; at Cebu, 13,993 bales, against 9,532 in 1887 and 6,374 in 1886.

Loading January 1, 1888: For the United States, 15,940 bales, against 24,500 in 1887 and 6,000 in 1886; for Great Britain, 5,302 bales, against 10,500 in 1887 and 8,500 in 1886. Local consumption has been estimated at 4,000 bales in 1887, against 5,000 in 1886 and 6,000 in 1885.

The following table will show the total amount of merchandise of all kinds exported to the United States in 1887:

Articles.	Quantity.	Value in United States gold.	Duties in United States gold.
Hemp..... tons..	45,462	\$5,148,706.63	\$91,927.22
Sugar..... do..	123,685	4,499,810.27	116,362.04
Coffee..... do..	47	6,185.99	106.99
Indigo..... do..	33	14,697.17	246.92
Hides..... do..	503	50,976.11	-----
Sapan wood..... do..	103	1,065.00	28.46
Tobacco..... do..	9	18,810.29	817.58
Rice..... pounds..	785	9.96	15
Preserves..... do..	330	12.45	-----
Fruit..... do..	75	11.62	-----
Hats..... number..	39,662	4,887.38	-----

AMERICAN VS. SUBSIDIZED SHIPS.

Of the total amount of hemp and sugar exported to the United States only 15,454 tons, or about one-third of the former and 60,249 tons, or less than one-third of the latter, were carried by American ships. Notwithstanding the fact that America receives more than half the hemp and sugar exported from the Philippines, our showing of ships here is remarkably small. Our captains explain it by saying that our government does not offer them the same encouragement that is given to the ships of other nations, and that if an American ship does not lose money now-a-days, it is doing remarkably well. Almost every captain I have seen since I have been here has expressed the most intense disgust over the situation, and has declared that he would abandon a seafaring life at once if he felt competent to do any other business. They assert that the ships of other nations are run at much less expense than ours, and that they are subsidized by their own government, so that they can carry freight at much lower rates than American ships can and still make money. How true this is I can not say, but it is a fact that but 29 American ships entered this port last year against 353 of other nations, exclusive of steam vessels.

In support of their assertions the captains, among other things, point to the record of freight rates, which have steadily declined during the past fifteen years, and this, they say, is almost wholly due to the fact that the ships of other nations, receiving government support, are able to carry freight profitably at rates against which American ships can not compete. The following table will show the freight rates from the Philippines to the United States for the past twenty years:

Comparative table of freight rates to the United States.

Year.	Hemp.		Sugar.		Year.	Hemp.		Sugar.	
	Highest.	Lowest.	Highest.	Lowest.		Highest.	Lowest.	Highest.	Lowest.
1868....	\$14.50	\$12.50	\$17.00	\$8.50	1878....	\$8.00	\$4.00	\$9.00	\$3.00
1869....	12.00	10.00	15.00	11.00	1879....	12.00	4.00	12.00	3.50
1870....	11.25	8.00	11.00	7.00	1880....	10.00	5.00	12.00	8.00
1871....	12.00	10.00	12.50	9.00	1881....	13.00	8.00	14.00	8.00
1872....	18.00	10.50	15.00	9.50	1882....	10.00	7.00	13.00	8.00
1873....	18.00	12.00	22.50	11.00	1883....	7.50	6.00	10.50	8.00
1874....	14.00	12.00	20.00	11.50	1884....	6.00	4.00	8.00	5.00
1875....	11.00	5.00	18.00	11.00	1885....	6.00	4.00	9.25	5.00
1876....	8.50	6.00	10.00	10.00	1886....	4.50	3.00	6.50	3.00
1877....	10.00	7.00	14.00	7.00	1887....	6.00	3.50	6.00	5.50

COFFEE AND TOBACCO.

The total export of coffee from the islands was 5,442.74 tons; of cigars, 800.49 tons, and of leaf tobacco, 4,717.94 tons. Only a comparatively small quantity of these products went to the United States.

The following table will show in detail the cargoes taken away from the three principal ports last year in American ships:

American vessels and their cargoes cleared from the Philippine Islands during the calendar year 1887.

MANILA.

Date.	Name of vessel.	Master.	Destination.	Cargo in tons.		Tonnage.
				Hemp.	Sugar.	
Feb. 18.	Henry Failing	J. Merriman	New York	1,140	1,388	1,898.85
19.	John T. Berry	James Watts	do	242	1,006	1,848.99

12.	Jabez Howes	F. T. Henry	New York	1,016	853	1,580.92
Total				11,027	26,207	82,759.84

* The Henry S. Sanford was subsequently wrecked in the harbor of Cebu and was towed back to Manila and sold at auction.

Twenty-nine American vessels entered the port of Manila during the year with a total tonnage of 34,766.85.

From Iloilo 70,883.85 tons of sugar were shipped in vessels of all nations, 41,074.23 tons from Manila, and 11.73 tons from Cebu. Iloilo is essentially a sugar port, and Cebu's specialty is hemp. No hemp was exported from Iloilo last year, while Cebu exported 6,735.06 tons. All the rice exported from the islands was shipped from Cebu. Iloilo shipped no tobacco, while 781 pounds were exported from Cebu. Besides the articles named above there were exported last year over 4 tons of pearl shells, about 43 tons of gum almaciga, and small quantities of other gums and fine woods.

IMPORTS.

The total value of imports from all parts of the world, as given by the official report of the Government, was \$16,530,000 (peso \$ = 84 cents American), of which \$523,421 worth, in Manila currency, or \$434,439.43 United States gold, came from America. But these figures do not represent half the quantity of American goods imported, for the same difficulty is experienced here as is complained of by other United States consuls in the east. American goods are shipped to Hong-Kong, reshipped there to Manila, and credited to Hong-Kong in the official reports. Other American goods are purchased in London and are entered as imports from England. In the Government report of imports the United States are credited with about 2½ tons of

flour, a ridiculously low figure when one ascertains that nearly, if not all, the flour used here comes from San Francisco. The amount stated is simply one shipment that came directly from California in an American ship. Over 100,000 sacks (50 pounds each) come here every year, of the same kind of flour that has been shipped from San Francisco to Hong-Kong, and is reported among the imports from the latter city. Thousands of barrels of American pork, I am told by a prominent merchant, come here every year from Hong-Kong, and yet the United States is not credited with a barrel of it. The same is true of canned goods and almost every kind of merchandise shipped from San Francisco, unless it is billed to Manila direct. Perhaps the merchant will think this fact of comparatively small importance so long as the goods get on the market here and are promptly paid for, but I am sure the local government's annual report of imports would be much more attractive and readable if the United States had a more conspicuous representation on it.

The following is a transcript from the Government report showing the merchandise imported from the United States last year.

Philippine Islands imports from the United States in 1887.

AMERICAN TRADE IN THE PHILIPPINES.

Here is another point that may be of interest to American merchants. One of the proprietors of the largest light hardware and house furnishing establishment in Manila told me recently that he bought American tools and some other classes of American goods in London because he could get better discounts there than he could from the manufacturers. Assuming that the London firm, because it buys large quantities of goods, receives better discounts from the manufacturer than are offered to a firm that buys smaller bills, how can it offer the best discounts to a Manila house after paying freight from New York to London? The merchant referred to admitted that American goods as a rule were far superior to those of other countries, but he said that his efforts to deal directly with our manufacturers had always been unsatisfactory, as they had manifested no special interest in selling their goods here. His trouble seems to have been his inability to get definite replies to his inquiries concerning discounts.

"I have a splendid handsomely printed catalogue," he said "of just the goods that I want, but it contains only the list prices with no discounts. I know there are discounts, for I get them when I buy the same goods in London, so what is the use of my bothering with the manufacturers when I can buy to better advantage and with less trouble somewhere else."

Although one frequently encounters American goods in the bazars and shops, by far the greater proportion—nearly all of them, in fact—have been purchased in Hong-Kong or London. Except American petroleum, which is used exclusively here, and in immense quantities, as it is the only illuminating material to be had beside coconut oil and candles, and a few American buggies and carriages, there are no direct shipments of goods from the United States to the Philippines, and apparently, no effort of any importance has been made by our manufacturers to put their goods into this market. I have heard that a year or two ago an agent for an American silver-plated ware manufactory visited Manila, but found that he could not compete with the prices offered by German and English manufacturers. This is undoubtedly true of some classes of goods, but not of all. I am satisfied that there are American manufacturers of silver-plated ware who can make a better article of table ware than any of the English or German goods sold here, and that it can be imported here and sold at the same price, with fully as good a profit. There are large quantities of Belgian enameled ware sold at prices that seem to me fully 50 per cent. higher than American enameled and granite ware is sold at retail in the United States. If there is any difference in the quality, I think it is in favor of the American ware. Tin-ware and all sorts of cooking utensils, I feel quite confident, could be supplied by American manufacturers as cheaply as by those of Germany, England, or any other country. The same is true of wooden-ware, tools, cotton cloth, calico, muslin, linen, canned goods, preserves, stationery, drugs and chemicals, agricultural implements, sewing-machines, and numerous other articles that would find a ready sale. The Singer sewing-machines may be found in many homes in these islands, and as the company has established a sales-room in Manila and another in Iloilo I infer that the market is found reasonably good, at least.

The only objection I have heard to American goods is the price, and the idea that they cost, as a class, more than the manufactures of other countries is acquired by comparing lines of goods that America never did, and, I think, never can make and sell as cheaply as Germany, England, Switzerland, and France. I refer to toys, fancy articles, and what are known as "notions." There are also laces, silks, embroideries, etc., in the sale of which in the east, of course, the United States can not yet compete with Europe. Some of the stores are filled with articles that look very attractive, but are cheap in every sense of the word. They are made in Europe, sell readily at what appears to be a reasonable price, and afford a large profit. It is admitted that American goods of a similar class are much superior in every respect, but they cost more and afford less profit. The same objection is raised to Spanish goods, and as a result Germany and England have the largest share of the trade, not only in "notions" and fancy goods, but in many lines which, it seems quite possible, could be furnished by the United States. But European manufacturers bid for the trade and Americans do not.

PAPER BAGS WANTED.

I want to call attention to the item of paper, 2,338.6 tons were imported last year, of which three kilograms or 6.6 pounds are credited to the United States and 2,334 tons to China. Considerable of this paper was probably made in China, the major portion of which was the coarse stuff used in the Chinese "tiendas" or shops here for wrapping purposes, but most of it was undoubtedly made in some other country and

shipped to Hong-Kong, from whence it was sent here. The United States may have had a share of this trade amounting to more than 6 pounds.

Paper bags and good wrapping paper and twine, such as one sees in the stores in the United States, are unknown here. You make a purchase at a grocery store, and if the article is in a tin can or box, you are expected to take it as it is without a wrapper; if it is something that requires a wrapper, you will get it rolled up in an old Spanish newspaper or a scanty piece of Chinese paper, something like the inside wrapper of a bunch of fire-crackers, which will tear upon the slightest provocation. ^{It} but you get no string tied around it, and must take the chance of spilling your purchase before you reach your destination. If you ask for a string, as I did once, the salesman will smile in a surprised way, elevate his shoulders, holding the palms of his hands out toward you, and reply:

"No, señor, no lo tengo" (No, sir, I haven't it).

He knows at once that you are a stranger in Manila, and his face and manner show that he pities your ignorance.

In the small Chinese "*tiendas*" and native shops pieces of the banana leaf are used for wrapping goods, and the package is tied with a blade of strong swamp grass, banana-tree fiber, or thin strip of rattan. There is a mission here for the American paper bag.

A PENCHANT FOR PERFUMERY.

Florida water sells in large quantities, and the familiar bottles and labels may be seen on the shelves of every drug, dry goods, and fancy store in Manila. Allow a Chinese peddler to open his pack at your door and it is highly probable that the first thing he will produce will be a bottle of Florida water. Cologues, toilet waters, and numerous varieties of perfumes have large sales among the natives as well as among the foreigners, and there are two quite large stores here devoted almost exclusively to the sale of that class of goods, while several of the drug stores carry quite large stocks. The majority of the people seem to have a passion for fragrant odors, and not only perfume their clothing liberally, but burn sweet smelling gums, woods, and leaves in their homes, filling the air about them with delightful fragrance. As many of the natives keep their pigs and dogs under their houses and empty their slops there too, there are generally several loud-breathing cess-pools below, and the contest for supremacy between the odors is often vigorous and interesting.

AMERICAN PATENT MEDICINES.

A few American patent medicines, notably Jayne's, Holloway's, and Mother Sigel's Sirup, have been sold here quite largely, but can come here no more unless the manufacturers consent to comply with the provisions of a decree issued about four weeks ago which requires that the formula by which patent medicines are made shall be printed on the outside wrapper of each package so that it can easily be read by all purchasers. This is considered by local druggists as an effectual bar to the entry of all patent medicines, as it is not probable that the manufacturers will consent to make public their formulas, except in very rare cases. When the supplies on hand are exhausted the medicine-takers will have to find new remedies for their ailments or give up being sick.

AMERICAN CARRIAGES AND PHILIPPINE HORSES.

American buggies and carriages are quite numerous on the streets of Manila and, I believe, are all shipped here by a Philadelphia firm. Light broughams, dog-carts, and victorias find a ready sale, but they must be very light, as all the horses are very small. They are very much like Australian ponies both in size and powers of endurance. Large horses of the breeds common in the United States are not often brought here, it being popularly believed that they can not stand the climate. I have been told that quite a number of persons have tried to keep and breed the larger horses, but that the experiment has always proved a failure; that they soon became unable to work and in a short time die. I do not understand how the little horses, or ponies, used by the native "*caromata*" drivers manage to keep alive under the treatment they receive, to say nothing of the climate. They are thrashed up and down the streets from early morning until far into the night hauling passengers hither and thither; probably only half fed, and yet apparently healthy and vigorous at all times. Some of them look a little discouraged, but the majority are in good condition. They are never used, however, for hauling freight or other heavy loads; that sort of work is left to the Chinese coolies and "*carabaos*" or water buffaloes. The latter animal is about the size and shape of a half-grown ox, with a hide like an ele-

phant's and a pair of great curved horns about 6 inches in diameter at the base and from 2½ to 3 feet long. These beasts are hitched singly to small, low, two-wheeled drays and haul enormous loads at a most aggravatingly slow pace.

AN OPENING FOR A DAIRY FARMER.

Dairy products are exceedingly scarce and very high, and there is apparently no reason why an enterprising dairy farmer could not make a great deal of money here with a few good cows. Butter in tin boxes and glass bottles imported from Europe sells at the rate of a dollar a pound; small Holland cheeses at \$1.50 each; a very inferior article of English and German cheese at from 50 to 75 cents a pound, and the Swiss cheese at 62½ to 75 cents. One house occasionally gets an American cheese and sells it off at a good profit almost as fast as it can be cut, but the intervals between cheeses is very long, as it is less trouble to get and keep the other kinds. It is not considered nice to be too active and enterprising in this climate.

There are a few cows owned by private families, who consume the milk and have little or none to spare; but occasionally cow's milk can be had at the rate 50 cents a quart. Native milkmen sell the milk of the carabao at 25 cents a quart, but it has a strong, disagreeable taste, which renders it unpopular, except with the natives, who have never been accustomed to any other kind. It is used sometimes for cooking by some of the foreign families. As a rule everybody, except the very few who own cows, uses the American condensed milk, Eagle brand, and it sells at retail for 37½ cents a can. There are one or two brands of milk powder on the market, but they are not extensively used.

Cows apparently thrive here, and I have heard of no good reason why there are not more here, nor why a dairy farm on the American plan could not be made a most profitable investment. There is good grazing; nipa sheds to protect the animals during the rainy season could be constructed at a comparatively slight cost. Corn is very plentiful, and palloi, or unhulled rice, the food given to horses and cattle, is comparatively inexpensive. In fact a man with an eye to economy would raise his own corn and palloi. He could sell all the milk, butter, and cheese he could produce at the prices I have quoted.

UNDEVELOPED RESOURCES.

I have not yet been here a year, and of course I have a great deal to learn of the islands and the resources of the interior of the country, but my observations thus far, which have been as extensive as my official duties would permit, lead me to believe that the possibilities here for men of temperate, industrious habits who are not afraid of the climate are very promising. I may have underestimated the climatic conditions and overestimated a white man's ability to endure them, but at present I believe that the statements I have made are strictly accurate.

Little attention is paid to agriculture, and yet the land is rich and fertile and the climate is favorable to vegetable growths of all kinds. Delicious fruits and vegetables grow wild, and nature seems to be only waiting to respond to intelligent effort and pour forth her treasures most lavishly. Every white man who comes here drops at once into trade in the cities, unless he comes as an officer in the Spanish service or has a special mission that will not admit of his doing anything else. No one thinks of trying to get a fortune from the interior of the country, and the exportation of hemp, sugar, coffee, indigo, etc., is considered, apparently, the only occupation that an American or Englishman ought to engage in. Coffee is a comparatively new article of export; a few years ago none was shipped, but last year 5,447.74 tons were exported, none of it, however, going directly to the United States. About 40,000 manila hats were shipped to the United States last year.

PROFESSOR STEERE'S EXPLORATIONS.

There are many things which, although abundant in various parts of the archipelago, are seldom or never exported. Natives come into Manila with great bamboo trays on their heads loaded with the finest kind of ginger root, which they dig in the woods where it grows plentifully, but, as far as I have learned none of it is ever exported. They sell it to the small Chinese dealers, who retail it to the city natives, and the latter make a weak tea with it to drink with their rice and fish. Prof. J. B. Steere, professor of zoology at the University of Michigan, Ann Arbor, Mich., who has been exploring these islands for the past year, tells me that arrowroot grows in great abundance on some of the southern islands, but none of it is exported. Professor Steere, who has been accompanied by Messrs. Dean C. Worcester, Frank S. Bourns, and E. L. Mosley, has made a number of most interesting discoveries in the

way of new species of birds and beasts, and incidentally has studied quite closely the trees, fruits, and plants of the archipelago. He is now on his way home, and I have no doubt that the report which he contemplates making soon after his arrival will be looked for with great interest not only by scientific men but by merchants and traders, who will find it a mine of most valuable information. This is Professor Steere's second visit to the Philippines, and I am quite satisfied that there is no man living to-day who has explored the islands so thoroughly or who has any thing like the vast knowledge of their resources that he has acquired. He is strongly impressed by their immense wealth in rare woods, gums, plants, etc., and the undeveloped possibilities for men of intelligence, industry, and capital.

The jungles are filled with rattan of all varieties, and quantities of it are used by the natives instead of nails in building their houses, while the Chinese make pretty furniture of it; but I have never heard of any of it being exported. Cocoa-nuts are very plentiful, and millions of them, formed into immense rafts, are floated down the rivers and creeks to the cities and towns, where they are sold. Quite a large number are eaten in the raw state, while many are made into preserves of various kinds, but by far the greater portion are converted into oil, which is burned in the native lamps or used to grease the raven tresses of the native belles. Very few are exported. Occasionally an enterprising Chinaman will fill a ship with them, top the cargo off with a few hides and betel nuts, and ship them to Hong-Kong or some other port in China, but I think they go no farther.

Fragrant woods, herbs, and gums and medicinal plants and trees grow profusely, but no one pays any attention to them except the natives, who gather small quantities and sell them as their necessities prompt.

I inadvertently omitted to say, when referring to the habits of the natives, that the average countryman does not take kindly to labor, and indulges in it only when he finds it necessary to supply some of his pressing needs. If he should happen to need something for his family that could not be procured without money, or desired to contribute something to his church, he would go out and gather fruit, or ginger or pine-apples enough for the purpose. But his wants are very few, and he doesn't feel the necessity of work. This statement does not apply to the city native, nor to those living in the adjacent suburbs, who as a rule are quite industrious.

IMPORTED RICE.

As an illustration of the prevailing indifference to agriculture, the fact that it is found necessary to import rice is very striking. Rice is the staff of life for the natives and takes the place of bread; there is plenty of fertile land in these islands upon which it might be cultivated, and yet last year \$1,304,000 worth was imported from China and Japan to supply the market here. I have neither seen nor heard of a farm nor a farmer since I have been here, and yet I have seen tracts of rich land that I believe an American farmer would go into ecstasies over.

Many of the natives have little patches of corn, and for roasting or boiling when young it is fully as good as the average American sweet-corn. When ripe and dry it is hard and flinty, like our best red corn, but I have never seen any of it shelled for sale on the market, nor is corn-meal made as far as I know. It is apparently raised only for roasting, and when green it is peddled about the streets by the natives, cooked and raw, for one *cuatro* (1½ cent) per ear and three *reals* (37½ cents) per one hundred ears at wholesale. I am told that it reaches maturity five weeks after planting, and I am sure there have been two crops here since the first of last January.

Large quantities of indigo and ylang ylang are exported, but it is an exceedingly small percentage of what might be shipped. Ylang ylang, it is asserted, is peculiar to these islands and is found nowhere else. The fragrant blossoms are hawked about the streets of Manila in large bamboo trays by native women who sell them by the handful to ladies and gentlemen who desire to perfume their trunks and wardrobes. A handful worn in the inside pocket of the coat will soon make a man smell like a wedding. There are quite a number of other aromatic blossoms, leaves, and roots used for similar purposes, which grow in profusion in the interior and are sold about the streets in small quantities.

THE MANILA MANGO.

Among the many luscious fruits of the islands the mango is the most famous. It is asserted that nowhere in the East does this fruit reach such perfection as in the Philippines, and the "Manila mango" has a great reputation throughout this side of the world. It is about the size and shape of a slightly flattened goose egg—probably a little larger—with a yellowish skin and meat a light shade of lavender. It is very juicy and has a rich, peachy flavor, with faint suggestions of half a dozen other kinds

of fruits. Of course it cannot be shipped in its natural state, but it and many other fruits might be preserved or canned and exported to the United States and other countries quite profitably. When the mango first makes its appearance in Manila, in January, it sells for most extravagant prices. This year the early ones sold for 50 cents each, and I heard it said that some of the wealthy Spaniards paid as high as \$10 a dozen for them. But after the first week or two the price drops to 25 cents each, then to a dollar a dozen, and continues to decline until the market is full of them at 12 and 15 cents a dozen at retail.

ALEX. R. WEBB,
Consul.

UNITED STATES CONSULATE,
Manila, August 1, 1888.

AUSTRALASIA.

SOUTH AUSTRALIA.

REPORT BY CONSULAR AGENT MURPHY, OF ADELAIDE.

The colony of South Australia having just completed the fiftieth anniversary of its foundation, the statistics embodied in this report will give some idea of the rapid strides it has made in material progress and civilization since it was erected into a colony five decades ago. Then, like most early settlements, the land presented all the possibilities for the formation of a great colony, and only required labor and population to convert the wilderness into the prosperous towns and flourishing farms that are spread over the land to-day. This has not been done without a great struggle, a struggle that has been more severe than in most new colonies, owing to the irregularity of the rain-fall and the consequent scarcity of water. The numerous checks that the colony has received in its onward march may all be traced primarily to dry seasons and their inevitable result, bad crops, and depression among the sheep-raisers. Until very lately, wheat, wool, and copper have been almost the only products of the colony. When from any cause the supply of the two former has failed, or the price of copper has fallen, the result has been disastrous to the colony. But now that the resources of the land have been better developed, and gold, silver, copper, and tin mining are flourishing industries, and the manufacture of jams, agricultural implements, wine, and oil are carried out upon a large scale, the prosperity of the land depends less than formerly on the one hazard of a good wheat crop. Thus the result of seasons of drought will not be so widely felt or so generally disastrous, and the colony in all probability will make far greater progress during the next fifty years of its existence than it has done in the half century that has just passed away.

In the details of the progress of the colony and its present status the first item is:

POPULATION.

The population at the end of last year was estimated at 317,446, which is only 4,000 more than in 1885, but, as the estimate for 1886 was only 312,758, it shows an increase of nearly 5,000 for last year. The subjoined table shows the estimated population of the colony for the past ten years:

1878	248,795	1883	304,515
1879	250,460	1884	312,781
1880	267,573	1885	313,423
1881	286,324	1886	312,758
1882	293,509	1887	317,446

It will be seen that the increase in population from 1878 to 1879 was over 10,000; from 1879 to 1880, over 8,000; from 1880 to 1881, over 18,000; from 1881 to 1882, over 7,000; from 1882 to 1883, over 11,000; and from 1883 to 1884, over 8,000. Since 1884 the increase has not been 5,000. The average access to population from 1878 to 1884 was over 9,000; but from 1884 to 1887 it had fallen to 1,500. This is mainly due to the depressed times, resulting from over speculation in land, combined with continued bad harvests. The phenomena of decreasing population in bad times is common to all the colonies, and seems to be the outcome of the oscillation of what may be called a "floating population" who wander from colony to colony in search of prosperous times, and have no home or ties sufficiently strong to induce them to settle permanently in any one province. In addition to that the newly-formed mining towns of Silverton and Broken Hill have been chiefly populated by South Australians, to which colony those towns geographically belong, though they are under the New South Wales administration; but, considering that all the business in those

places is transacted through South Australia, this colony reaps the substantial benefit of the population. About 15,000 of the population were lost in this way during 1885, 1886, and 1887. However, population is steadily increasing now, especially in Adelaide and suburbs, where the former decrease was most acutely felt. Adelaide and suburbs now contain 113,000 souls.

LAND.

The whole province contains an area equal to 578,361,600 acres, which gives the proportion of 3 square miles of country to every soul in the colony. The total acreage alienated up to January 1, 1883, was 9,860,927, or in the proportion of 31 acres per head of the population. Included in the total are 7,308½ acres, which were taken up last year as workingmen's blocks containing from 5 to 20 acres each and leased for twenty-one years at an average rental of 32 cents per acre.

The greater portion of the land alienated, outside of city and township property, has been sold under the "Credit selections act," which permits farmers to select land on payment of a deposit of 10 per cent. of the purchase money, and spreads the payment of the balance over a number of years. The act has worked fairly well, but it has been found that the price of \$5 per acre has been in a great many instances too high, and has tended to make the lot of numbers of the small farmers a simple struggle for existence. Of the 9,860,927 acres alienated, 6,310,497 acres have been taken up on credit at a price of \$41,902,640.

WHEAT CROP.

About 2,800,000 acres of the land alienated from the Crown were cultivated last year, and most of it (2,008,100 acres) were utilized for growing wheat, and produced about 20,023,000 bushels of grain, or an average of 10 bushels per acre. It will be seen from the following table that this is the best yield the colony has had since 1875-76:

	Bushels.	Pounds.		Bushels.	Pounds.
1875-76.....	11	57	1882-'83.....	4	13
1876-77.....	5	24	1883-'84.....	7	56
1877-78.....	7	40	1884-'85.....	7	32
1878-79.....	7	9	1885-'86.....	8	45
1879-'80.....	9	47	1886-'87.....	5	15
1880-'81.....	4	58	1887-'88.....	10	0
1881-'82.....	4	34			

The figures give an average yield of 6 bushels 55 pounds per acre for the last thirteen years, which is 3 bushels and 55 pounds less than last year's yield. The low average for the last thirteen years is due in a great measure to the improvident manner in which the farmers sterilize the land by sowing wheat in the same land year after year without any attempt to irrigate, rest, manure, or in any way vary the crop. A second factor may be traced to the large area of land upon which wheat is grown which is situated beyond what is known as "Goyder's line of rain-fall." This line has been marked down by the surveyor-general of this province, north of which he declares the rain-fall to be too uncertain for wheat growing purposes, and though in one or two years fair crops have been grown beyond this limit, the average yield for that portion of the country has tended to verify Mr. Goyder's statement.

Out of the 20,023,000 bushels of wheat produced at least 2,000,000 bushels will be required for seed purposes, and, say, 1,732,500 bushels for home consumption. There would then remain available for export 16,290,500 bushels, and this with some 1,440,000 bushels still on hand at the end of 1887 make a total of 17,730,500 bushels available for export this year. This at the low average price of 75 cents per bushel means a sum of \$13,297,875 to the colony. Though the yield has been prolific the sample is not quite up to the average for the past ten years. The sample this year weighed 66 pounds 11½ ounces.

Decennial return of weight of wheat per imperial bushel.

	Pounds.	Ounces.		Pounds.	Ounces.
1878.....	66	5	1883.....	68	9
1879.....	65	1	1884.....	67	14
1880.....	68	0½	1885.....	66	5
1881.....	66	0	1886.....	65	10
1882.....	67	11	1887.....	68	11½

A reference to the table of the average yield will show that the weight of the sample does not depend upon the abundance of the yield, for though the sample has been generally of good weight in good seasons, still the best wheat has been produced in the bad seasons, notably in 1883, when the yield only averaged 4½ bushels, but the sample weighed the heaviest recorded in the ten years, viz., 68 pounds 9 ounces. The reason of this appears partly from the fact that bad harvests have been the result of other causes than dry seasons. Heavy storms when the grain is ready for reaping, red rust, and grasshoppers have all added their quota at different times towards ruining the harvest.

THE FLOUR INDUSTRY.

The manufacture of flour in South Australia, always a great industry here, has improved in a wonderful manner during the past few years, and the introduction of the roller system has given it a great impetus. The quality of our wheat enables the miller to turn out an article which commands attention in every part of the world, and it is not so surprising therefore that a ready sale is obtainable in places where competition is not so keen as to cause too great a difference in price between the home and South Australian produced article. It is only lately that China has been drawing supplies from South Australian flour, but during the present season a large quantity has found its way to Hong-Kong. New South Wales has for many years purchased most of her flour in this colony, and during the last twelve months close on to 20,000 tons have been sent to Sydney and some 10,000 tons to Queensland, another old customer. About 3,000 tons have gone to South Africa, and Ceylon, New Caledonia, and Cochin China, have also drawn small lots. For the twelve months ending September 30, 75,349 tons had been exported, representing a value of \$3, 37,315. Of this 60,000 tons are credited to Port Adelaide, Port Pirie coming next with 8,628 tons. For the manufacture of flour there are 85 mills in the colony, with a total horse-power of 1,951 and employing 644 hands

RAIN-FALL.

In no country in the world is the rain-fall a matter of so much consequence as in this province. A succession of dry seasons not only causes wide-spread depression, but absolutely paralyses all the business of the country. The one great cry of the land is for water, of which it is almost impossible to get too much. The Government has awakened to this fact, and to minimize the effects of long droughts is carrying out large schemes for water conservation, such as the construction of large dams and reservoirs where the rain-fall is good and the conformation of the country affords facilities for such operations. In drier districts where rain is more scarce recourse is had to boring, and artesian wells are now fairly numerous in the arid back country, and promise to be a great source of benefit to the farmers.

Only twice in the last twenty-five years has the rain-fall exceeded the amount recorded last year, 25.701 inches. In 1883 the fall was 26.761 inches, and in 1875, 28.964 inches were registered. By comparing the following table of the rain-fall since 1875 with the table of the wheat yield during the same period it will be seen how uniformly the heavy rain-fall is succeeded by a good crop.

Table of rain-fall for past thirteen years.

	Inches.		Inches.
1875	28.964	1882	15.742
1876	13.434	1883	26.761
1877	24.949	1884	18.738
1878	22.083	1885	15.887
1879	20.709	1886	14.420
1880	22.226	1887	25.701
1881	18.102		

EXPORTS.

The annual value of the exports of the colony is in a great measure dependent upon the crops, but the highest figure the exports ever reached was \$26,461,110 in 1884, when there was only a medium harvest. The exports for 1887, owing to the failure of the harvest of 1886 and the dullness of the times, only reached \$16,742,805. Of this amount \$8,754,260 worth, consisting of everything the colony produced, found its way to the United Kingdom, whilst only \$140,530 worth of exports, consisting chiefly of kangaroo skins, reached the United States from here. The total value of kangaroo and opossum skins exported was \$249,225, and they were chiefly for the American market; but as the total exports for the States direct was only \$140,530, it shows that more than 50 per cent. of the exports from here to the States found its

way there from some other country. This is accounted for by the fact that owing to the want of direct communication between this colony and America, parcels for America are consigned to England, and thence re-exported to their destination. Of the total exports, about \$16,750,000, nearly \$14,000,000 were made up of the six following items.

Wool, largest amount ever exported...	\$6,790,580	Flour.....	\$3,488,340
Copper and copper ore	1,201,665	Bark	284,935
Wheat.....	1,801,870	Bullion	360,000

The only remaining articles besides live-stock and perishable articles that exceeded \$10,000 in value were:

Agricultural implements.....	\$123,995	Meat, preserved and salt.....	\$22,010
Apparel and clops.....	10,220	Manganese ore.....	25,720
Beer.....	12,810	Potatoes.....	13,075
Bone dust.....	13,290	Saddles and harness.....	13,960
Boots and shoes.....	15,650	Kangaroo skins.....	197,840
Butter.....	15,080	Rabbit skins.....	37,070
Eggs.....	148,110	Opossum skins.....	18,510
Bran.....	120,775	Sheep skins.....	492,210
Pollard.....	33,318	Soap.....	48,720
Hay and chaff.....	184,430	Tallow.....	43,065
Iron girders and columns.....	31,740	Tannage.....	18,020
Jams and jellies.....	110,486	Vehicles.....	63,320
Leather.....	186,845	Unenumerated articles.....	25,100
Manure.....	17,835	Wine.....	118,995

The item of wine has been steadily increasing in the amount exported, and since the Indian and Colonial and Adelaide Jubilee Exhibitions the trade has assumed much larger proportions. The wines made here are finding great favor in the English market, where they are considered to compete favorably with the best French wines. The amount of wine annually produced now is 600,000 gallons from 4,850 acres of vineyards. In 1886 the acreage under cultivation for this industry was 6,679 acres, and the wine produced was 895,000 gallons, but of much inferior quality to that now manufactured. The large wine makers now buy the fruit of the small grape growers, and by this means the produce is kept more uniform in character and can be reproduced year after year.

BARK.

The supply of wattle bark, which this colony produces, is practically unlimited in extent, and is one of the finest tanning agents in the world. The following is the report of the royal imperial commissioners for the Colonial and Indian Exhibition: "They have an admirable tanning agent in the bark of the *Acacia mimosa*, or wattle, as it is spoken of in the country. The leather produced by this bark is some of it of bright color and high excellence, and large quantities are sent to England, where it sells as readily as the production of their tan-yards. The black wattle bark is the richest in tanning properties, and the best is that shipped from Adelaide, where the chopping, grinding, packing, etc., is as well done as they are capable of being. The wattle grows wild now, but would prove an immense source of revenue to cultivate, as the trees would yield easily a ton to the acre, and that at \$37 or \$40 per ton would pay the small expenses incident to cultivation and an almost princely profit."

IMPORTS.

The import trade of the colony for the past year reached the value of \$25,481,465, and though this amount is less by \$5,750,000 than the imports in 1882, it shows a large increase over the past year for which the figures are 1886, \$24,113,750, and a slight decrease on the \$26,445,070 imported in 1885. The imports from the United States declined from \$914,865 in 1885 to \$852,520 in 1886, and last year there was a further drop to \$571,220, a clear indication that from some cause the trade between this colony and the United States, which might be developed to an unlimited extent, has gradually fallen away. The English imports have also fallen off, especially between 1885 and 1886, when the decrease amounted to \$3,940,000, and last year was \$125,000 less than in 1886. The increasing trade between this colony and New South Wales has been mainly responsible for this. In 1886 the trade between here and Sydney showed an increase of nearly \$5,000,000 over 1885, and last year about \$1,250,000 over 1886. The imports from Queensland have also grown a hundred per cent. since 1885,

when they were valued at \$370,000. Trade between this and the remaining colonies during the last three years has shown a decided downward tendency. At all events the figures show that the merchants in this colony are not so wedded to English manufactures as to decline to go elsewhere, and a little energy on the part of American houses could increase a hundred fold their present exports to this colony which, in the undeveloped state of its manufactures, affords such a splendid field for the more matured manufactures of older nations. That there is a wide field here for American enterprise and trade may be easily gathered from the following table of articles imported last year, and whose import value exceeded \$25,000 :

Wool	\$3,865,000	Machinery	\$370,000
Sugar, molasses, and glucose	1,390,000	Drugs	275,000
Drapery	1,360,000	Oil in bulk	275,000
Bullion	1,185,000	Galvanized iron	225,000
Cotton, linen, and woolsens	1,180,000	Tobacco, cigars, and snuff	200,000
Tea	605,900	Fancy goods	185,000
Apparel	530,000	Books	185,000
Beer	530,000	Hardware	180,000
Bags and sacks	530,000	Agricultural implements	180,000
Boots and shoes	415,000	Tweeds and cloths	165,000
Coal	395,000	Furniture	140,000
Spirits	390,000	Bar and rod iron	140,000
Wire	140,000	Wood, spars and quartering	65,000
Stationery	140,000	Leather	60,000
Wood (unenumerated)	135,000	Potatoes	60,000
Grain, barley and maize	135,000	Rice	60,000
Oats	130,000	Hops	60,000
Dried fish	115,000	Musical instruments	60,000
Deal and battens	115,000	Plate and plated ware	55,000
Coffee, raw and roasted	85,000	Glass and glassware	55,000
Malt	85,000	Earthenware and china	55,000
Boards	80,000	Jewelry	50,000
Capet and drugging	70,000	Chocolate	45,000
Candles	70,000	Clocks and watches	45,000
Wine	70,000	Nails	30,000

The articles in the above list supplied by Great Britain were chiefly machinery, ironmongery, printed books, stationery, drapery of all sorts, spirits, drugs, jewelry, tweeds, cloths, and every variety of manufactured articles. The imports from the United States consisted chiefly of kerosene, and other mineral oils, tobacco and musical instruments, thus leaving the bulk of American manufactures comparatively unrepresented. England monopolized 44.1 per cent. of the entire trade, and the other colonies 45.1 per cent., whilst the imports from all foreign countries including America only reached 6.5 per cent. upon the total amount.

TARIFF.

The protective tariff which was adopted last November will probably have a deterrent effect upon the import trade during the current year, and this will probably be more marked as time goes on and manufactures which have risen under the sheltering wing of protection commence to put forth their supply. However, the tariff though distinctly protective is by no means prohibitive, and the free list is the most extensive of all, consisting chiefly of articles which the colony affords no facilities to produce. The large import of wool into the colony is due to the South Australian ports being easier of access to many of the back country stations in Victoria, Queensland, and New South Wales.

VITAL STATISTICS.

It is a feature in South Australian, as well as in the statistics of all the colonies, that there has been for some years a steady decrease in the birth and marriage rates.

It is somewhat difficult to account for the falling off in births, and the explanation if any, would probably be more readily ascertained by an inquiry into the morals of the community, than by an analysis of its commercial status. The marriage rate is always low in depressed times, and the present falling off in the number of marriages may possibly be due to the wave of dull times which has swept over the whole world during the last few years. In 1878 there was an average of 38.22 births per thousand of population in this colony, and though the average has fluctuated a little since it now stands at 35.07 per thousand. Marriages in 1878 averaged 9.47 per thousand but in 1887 they only reached 6.40 per thousand, a fall of nearly 33 per cent.

The death rate has declined from 15.44 per thousand in 1878 to 12.77 in 1887, which is the lowest death rate in the colonies. This low rate may be traced pretty clearly to the adoption of the deep-drainage system in Adelaide and some of the suburbs, and it is mainly there that the great decrease in the number of deaths has been ap-

parent. The following is a decennial return of the proportion of the births, deaths, and marriages to the living population of the colony :

Year.	Proportion to every 1,000 of the population of—			Year.	Proportion to every 1,000 of the population of—		
	Births.	Marriages.	Deaths.		Births.	Marriages.	Deaths.
1878.....	38.22	9.47	15.44	1883.....	36.64	8.33	14.55
1879.....	38.81	8.77	14.04	1884.....	37.60	8.13	15.24
1880.....	38.81	8.66	14.79	1885.....	37.70	7.65	12.28
1881.....	37.11	8.00	13.90	1886.....	35.32	6.24	13.36
1882.....	30.64	8.55	14.84	1887.....	35.07	6.40	12.77

Possibly, all the birth, death, and marriage rates would be somewhat lower if the actual population of the colony could be definitely ascertained, but there has been no census taken since 1881. A census should have been made in 1886, but owing to the bad financial position of the colony then, it was decided for economy's sake to make no census and to abandon the annual collection of the live-stock and agricultural returns. In those matters, therefore, all the figures must be taken as approximate. They are chiefly compiled from the returns of the daily papers who spare no pains to insure their accuracy, but being unsupported by act of parliament they have no means to compel those who are unwilling to furnish returns to send them information.

MINING.

The mining industry in this colony has received a great impetus by the discovery of the Broken Hill and other mines in the Barrier district of New South Wales, about 9 miles from the South Australian border. As mentioned before these places belong geographically to this colony. Though situated in New South Wales, the population is mostly derived from here and the greater part of the trade and the substantial benefits of the discovery flow into this province. A branch from this colony's main trunk line of railway brings Broken Hill within sixteen hours' journey of Adelaide.

The Broken Hill proprietary mine is one of the richest silver mines ever discovered, and it is said to rival even the great Comstock mine. The lode is several miles in length and varies from 60 to 100 feet in width. The weekly output of ore from the mines varies from 1,200 to 1,500 tons which yield from 40 to 45 ounces of silver per ton. The capital of the company is \$1,600,000 in shares of \$100 each, issued as being paid up to \$95. Dividends are paid at the rate of \$10 per share per month and already \$2,520,000 have been paid in this way. The shareholders have also received for block 14 shares in that company whose value was \$2,160,000. For blocks 15 and 16, \$2,980,000 in cash and 80,000 \$25 shares fully paid up. For block 10, they received 96,000 \$50 shares paid up to \$48. All the skilled labor for the mine has been imported from America, notably Mr. Patton, the manager, who filled a similar position at the great Comstock mine. Mr. Schlapp, the underground manager occupied a like situation at that renowned mine. The assayer is also an American. There are numerous other mines in the district which are not doing as well as they might owing to the difficulty in obtaining machinery to concentrate ores which are easily obtainable from extensive lodes that are not of a rich description. There is a wide field open here for the ingenuity of machinists in America, who might make an immense trade with this colony by manufacturing machinery of the nature indicated.

Some silver mines of great promise are also being developed in South Australia proper, about 250 miles from Adelaide, and bid fair to be equally as productive as the Barrier mines. The deposit is said to be 20 or 30 square miles in extent, with lodes that exceed 100 feet in width. Assays of ore from the field have given from 60 to 100 ounces of silver per ton and from 40 to 60 per cent. of lead.

In spite of all these finds the share market is dull, owing partly to the reaction after the excited state of the market when the discoveries were first made, and partly to the natural delay that must occur between the floating of the companies and the proper development of the mines.

The revival of the price of copper, through the operations of a French syndicate, has given a fresh impetus to the working of the copper mines here. Most of the mines were closed and the towns around them robbed of half their inhabitants, and the houses fallen to decay, but the rise in the price of copper has stimulated the mining companies to fresh exertions, and has induced the opening up of new mines

that would not pay to work during the time that copper was quoted at the low figure of \$156 per ton. The Moonta and Wallaroo mines are in full work again and are paying good dividends. During 1887 there was a larger amount of copper exported than in any year previously, except in 1884, when the amount exported was 91,441 cwt. of copper and 23,968 tons of ore, as compared with 77,490 cwt. of copper and 12,695 tons of ore exported last year. Though the amount of copper and ore sent away last year was, except one, the largest amount exported in one year, the money-return for it was the lowest but once, viz, \$1,599,770. The lowest value was in 1886, \$1,376,400 for 72,711 cwt. of copper and 14,782 tons of ore.

Gold mining is progressing steadily, and in addition to the Teetulpa and Woodside finds a fresh discovery is reported beyond Terowie, about 180 miles from the capital. The reefs appear to be of an exceedingly rich description, and quartz that has been tested has given from 6 to 140 ounces per ton. Gold has also been found in the McDonnell ranges near the reported find of rubies. The reefs there are extensive and rich and offered a great opportunity for thorough miners to make a fortune.

There has been a great deal of excitement over the reported find of rubies in the McDonnell ranges in the far North, but from the report of experts in England it appears that the gems are only garnets of a very superior kind. It is probable that mining in all its branches will receive a very great stimulus when the act legalizing mining on private property which is now before the legislature becomes law. Now that the finds of gold are so extensive it might be pointed out that America might command the whole trade and supply the demand for gold-crushing and concentrating machinery which now for the want of a little pushing finds its way to England and the other colonies.

SHIPPING.

The shipping trade in the colony shows a large increase in the last few years both in cargo and passenger steamers, but the sailing-vessel trade is steadily growing weaker as the greater facilities for transferring cargo and the shorter times in which steamers deliver it increase. There are two lines of mail steamers, the P. and O. Company and the Orient Company, both of which receive aid from the English and Colonial Governments. Their fleets are composed mostly of steamers whose tonnage exceeds 5,000 tons. In addition to these the Messageries Maritime Company's boats and those of the Nord Deutscher Lloyds Steamship Company call every month. Both of these lines are subsidized by the Governments of the countries to which they belong. There are several lines of British cargo steamers that call, and the British India Steam Navigation Company's boats put in an appearance occasionally.

It is most noticeable that there are no steamers from the United States calling here, although there is a splendid opening for them. Most of the prominent mercantile marine countries in the world, except the United States, are represented by steamers calling for our trade. The San Francisco mail steamers only come as far as Sydney, and as a result this colony has to pay 38 cents per pound for the carriage of letters that come by that route, from Sydney to Adelaide, and for which the United States makes no allowance to this Government. This could easily be obviated by the steamers calling here via Melbourne, and would be the means of opening up direct communication between here and America.

In course of time the vessels that are trading here now will have obtained such deep root in commercial circles that any opposition then will be a tedious and expensive undertaking. Only 17 vessels arrived here from American ports last year, and out of this number only two ships, whose combined tonnage only reached 1,400 tons, were flying the American flag. The remainder were all foreign vessels that were doing the trade that America itself neglected.

Latest advices state that a large company has been formed in Hamburg for the purpose of running a line of boats from there to Australia. It will be seen from the following decennial statement of the number and tonnage of vessels arriving at Port Adelaide that 1884 was the best year in the last ten both as regards the number of vessels and tonnage outward and inward. Since then the large steamers calling here have naturally decreased the number of smaller vessels calling here.

Years.	Arrivals.		Departures.		Years.	Arrivals.		Departures.	
	No.	Tons.	No.	Tons.		No.	Tons.	No.	Tons.
1878	1,026	452,738	1,035	453,535	1883	1,062	744,926	1,074	755,810

1880	1,045	590,085	1,111	610,819	1885	1,072	893,092	1,091	913,050
1881	1,072	640,885	1,081	628,006	1886	859	770,922	878	787,554
1882	1,113	675,441	1,099	661,777	1887	907	841,422	905	836,461

It is interesting to note that during the last ten years the annual number of ships arriving at our port decreased 11.6 per cent., but the tonnage increased 85.8 per cent., so that though the number of vessels that arrived last year was 119 less than in 1878, their tonnage was greater by 388,684 tons.

The following is a list of vessels owned and registered in the colony: Steamers 88, tonnage 11,481; sailing vessels 134, tonnage 15,583; barges, hulks, and lighters 82, tonnage 7,804; total 307 vessels, tonnage 34,868, or an average of a little more than 112 tons each. The Government vessels are not included in this. They consist of 8 steamers, 2,220 tons; 7 dredges, 1,800 tons; 3 launches, 50 tons; 8 light-ships and hulks, 420 tons; 9 barges, 2,000 tons; 53 pontoons, 2,000 tons; 6 life-boats, and H. M. C. S. *Protector*, 1,000, tons, 10 guns, and equipped in the most complete manner with the latest improvements.

FOREST DEPARTMENT.

This department is developing into one of the most useful departments in the colony and is yielding a revenue that promises to be of substantial value to the colony. The forest department was first established in 1870, and since then natural forests have been protected and reserves granted which have been planted with trees of a useful description. These have all been wonderfully successful, and, as tree nurseries, bring in a good income. In the northern district of the colony there are 8 reserves containing 23,134 acres. In the western district one reserve of 4,174 acres. In the southern district 9 reserves, containing altogether 45,440 acres. In all, 24 reserves containing an aggregate of 165,324 acres. Additional to this are 6,685 acres of land inclosed and devoted to the purpose of planting and the encouragement of a natural growth of trees in the indigenous forests. There are six nurseries under the department of an aggregate area of 33 acres, from which about 1,000,000 trees have been raised annually, but it is hoped with recent improvements to double this number in future.

Last year the expenditure for this department was \$27,315, and the revenue \$40,615. Since the establishment of the department the expenditure has been \$290,000, and the revenue \$295,000. Thus the whole work of the department has been carried on without any actual expense to the country, and at the same time the reserves are valued at \$750,000, and are a permanent source of revenue. A contract has been entered into by the forest department with the Broken Hill proprietary mine for the supply of 200,000 feet of sawed timber per month for the next three years. Besides smaller contracts large quantities of railway sleepers are supplied to the Government as required. To encourage the planting and culture of trees an act has been passed authorizing the payments of \$10 per acre for every acre planted by a land-owner, under certain specified conditions.

RAILWAYS.

The railway system of South Australia now extends over 1,499½ miles and there are 27½ miles in course of construction. The lines extend nearly 690 miles to the north of Adelaide, and nearly 200 miles to the south.

The most important line yet opened is the line to the Victorian border, which connects this city with Melbourne and Sydney. The distance by rail from here to Melbourne is 510 miles and the express train occupies 18 hours in performing the journey. There is railway communication with Broken Hill, a distance of 310 miles, which taps all the trade from the Barrier district.

The transcontinental line from Adelaide to Port Darwin is completed nearly as far as Angle Pole, 690 miles north of Adelaide. There is a line being constructed from Palmerston in the Northern territory to Pine Creek, 146 miles, which line it is proposed to push inland and eventually connect with the transcontinental line, of which there are still 1,000 miles to construct. There is considerable difference of opinion about the construction of the intervening 1,000 miles to complete the line. Many are averse to the colony increasing its public debt to the extent that would be necessary for finishing the work. There seems to be a growing disposition to have it finished on the land-grant system. American capitalists who have had any experience in this kind of work would find here a splendid opening for them. The line will traverse some of the richest pastoral and mineral country in the whole continent, besides opening up a route that would, with efficient steam service, bring the colonies in the matter of mail communication several days closer to England.

The railway returns show that the total cost of construction of the railways in the colony has been \$48,531,185, and the revenue was \$4,298,140, or 4.45 per cent. on the total cost of construction. The average interest on the money borrowed for construction is 4 per cent., so that the money invested in railways has, after paying interest on money borrowed, contributed 0.45 per cent. profit to the general revenue. The total working expenses were \$2,170,000 and the earnings \$4,330,000, leaving a profit of \$2,160,000. This is the best return the railways of the colony have made, for in no previous year has the excess of receipts over expenses been sufficient to cover the interest

on the original cost. The railways have now been placed under a board of three commissioners, who are not subject to parliamentary control. The chairman of the board is Mr. J. W. Smith, who was manager of the Great Western line in England. His two colleagues are Mr. Hill, who has been manager of a large coaching company for many years, and Mr. A. S. Neill, a gentleman of wide commercial experience. It is hoped that, under this management, the railways will be considerably more profitable than hitherto.

SKINS.

Perhaps the largest item of trade between this colony and the United States consists of kangaroo and wallaby (a smaller marsupial) skins. Owing to the growing demand for these skins large parties are engaged catching these animals, male and female, old and young, in season and out of season, and as they are classed as vermin by the Government there is no close season, and these marsupials will very soon be exterminated. Considering the prospects of this trade and the extent to which it might be developed, the Government should take some steps to prevent the total destruction of these animals and encourage their production within inclosed areas. The tails and hind quarters are considered a delicacy, and a large trade might be done by preserving them. At present the slaughter is conducted on a wholesale principle. The animals are driven in great numbers into an improvised stock-yard, and are then knocked on the head with waddies. This is found preferable to shooting, because skins that have been perforated by shot lose considerably in market value.

Rabbits have simply overrun the colony, and many thousands of dollars are paid annually for their scalps. They are exceedingly destructive, and in those districts where they are most numerous make almost palpable decrease in the wheat yield. The supply of these skins is practically unlimited.

FINANCE.

The financial position of the colony, which has during the past few years been the cause of so much anxiety to all, has at length assumed a brighter aspect. Retrenchment has been the order of the day in all Government departments, and this, combined with the increased trade, due to the plentiful harvest and the development of the mineral wealth of the colony, have tended to assist the treasurer in putting before the country a statement which shows an estimated surplus of \$865,000 of revenue over expenditure for the present financial year. It will be seen by reference to the following table of revenue and expenditure that since 1882 the expenditure has been in excess of the revenue, until now there is a deficit of \$5,892,895.

Year.	Revenue.	Expenditure.
1882.....	\$10,800,695	\$11,650,395
1884.....	10,124,610	11,990,995
1885.....	11,547,995	12,274,040
1886.....	9,876,245	11,171,975
1887.....	10,070,510	10,725,675

The Government proposes to provide for this deficiency by issuing treasury bills for the amount, bearing interest at the rate of $4\frac{1}{4}$ per cent. per annum; \$125,000 worth of these bills have already been issued at a satisfactory rate. The public debt of the colony, including the amount of the deficit, now totals \$101,685,395, which averages \$305 per head of the population. The interest on this, which varies in rate from 4 to 6 per cent., is \$4,236,790 per annum. Thus nearly one-fifth of the yearly revenue of the colony goes to pay the interest on the public debt, but as most of the principal has been expended on reproductive works, such as railways, jetties, reservoirs, wharves, etc., it can only be looked upon in the light of a good investment, which will in course of time be the backbone of the colony.

TELEGRAPH, TELEPHONE, AND POSTAL.

The total length of telegraph lines in the colony is 5,485½ miles, which is an increase of only 81 miles over the previous year; length of wires in use, 11,008½; number of intercolonial telegrams sent, 703,575; receipts from same, \$211,925; telegrams international, 63,788; gross value of same, \$1,380,400; proportion due to South Australia, \$162,250; total revenue of department, \$974,975; total expenditure of department, \$393,080; excess of revenue over expenditure, \$440,180.

Since the opening of the telephone exchange in 1882 the business has increased at a great rate. Now there are 1,100 instruments in use and 1,620 miles of wire. There

are 6 telephone exchanges, and 439 subscribers. In Adelaide alone there are 362 subscribers. The revenues from this source for 1887, \$55,530.

The postal arrangements of the colony are very extensive and are a fair source of revenue. Last year the sum of \$120,000 was expended on the carriage of inland mails, and \$85,000 was paid for the carriage of English mails. There are 586 post-offices in the colony, through which no less than 15,181,309 letters and post cards, 708,542 packets, and 7,376,953 newspapers were transmitted. The revenue from this department was \$523,375. There are 174 money-order offices in the colony, through which 64,753 money-orders for \$955,780 were issued; 64,207 orders were paid for \$971,415. The revenue amounted to \$11,420.

In connection with this the anomalous state of things in existence as regards the postal rates between here and the United States might be mentioned. Letters for the United States via San Francisco cost 12 cents per half ounce, and via England 16 cents per half ounce. Letters from the States here, however, only cost 5 cents per half ounce, though as a matter of practice it continually happens that double and treble the required amount is put on letters for this colony.

CHINESE.

The question of the admission of Chinese into the colonies is the burning question of the hour through all Australia. As far as this colony is concerned the influx of Chinamen has been very small, and the whole Chinese population does not exceed 350 in South Australia proper, exclusive of the Northern Territory. In none of the colonies is the Chinese population sufficiently numerous to cause any alarm, but the people have heard so much of their evil influences in California and other portions of America, that they are determined by preventive measures now to obviate the necessity for curative legislation in the future. Of course the greatest outcry is from the laboring classes, who fear the competition of the Chinamen in the labor market; and as members of parliament are so largely dependent upon the working classes for their seats in the legislature, they find it absolutely necessary to cry down the Chinaman, right or wrong, and endeavor to hide the real cause of the agitation (the competition with European labor) behind the moral reason that the Chinese are not desirable colonists. To illustrate this view the most degraded representatives of that nation are held up as a sample of them all. The consequence is that almost the whole land cries out, "Exclude them."

There are really two classes of Chinamen who emigrate to these colonies, the loading criminal and the trader. The former class is guilty of those crimes and offenses for which both classes are blamed. The latter are a steady, thrifty law abiding people, whose presence in our midst is a direct gain to the country, and whose commercial integrity is beyond cavil. The proper course of legislation therefore should be not to exclude all but a class, and in this they would have the co-operation not only of all right-thinking colonists, but also of the Chinese Government itself. Some extracts from the report of Inspector Foelsche on the Chinese in the Northern Territory will be found interesting, and tend to bear out this view of the subject. He estimates the number of Chinese in the Northern Territory at 6,000. In Palmerston (the capital) the number varies from 800 to 1,300. They have in that town 39 stores, 3 carpenter shops, 2 shoemaker shops, 3 laundries, 5 tailoring establishments, 4 eating-houses, 3 fishing establishments, 32 fruit and vegetable gardens, 6 gambling-houses, 7 Chinese brothels (occupied by 24 prostitutes), and there are about 5,000 employed on railway works.

The gambling-houses are attended by all classes of Chinamen. The brothels are conducted quietly and drunkenness among the prostitutes is unknown.

"The Chinese engaged in the various businesses and occupations before enumerated with few exceptions are thrifty and law-abiding, and so are a portion of the laboring class, who came here under the auspices of the leading store-keepers, who as a rule obtain work for them on commission; but by far the greater number of the Chinese population, who came here of their own accord to get a living as best they can, are of the lowest and most undesirable class, and give the police a great deal of trouble. They monopolize our gold fields without paying for miner's rights, and if they do not get sufficient gold to supply their wants they steal and rob each other. A great many of them are old gaol birds from China and Hong-Kong, and would just as soon be fed in gaol as having to work for a living themselves."

He further points out that the punishment by imprisonment has no terrors for the Chinaman, and, as they are accustomed to live on a much more meager diet than that provided at the gaol, they have no efficient control over the majority of the lower classes.

THE LABOR MARKET.

With the gradual decay of the depression in the colony the glut in the labor markets became daily less pronounced. At present there is a fair demand for all kinds of labor, especially tradesmen and artisans, who can always find employment at re-

manerative rates. Domestic servants find plenty of openings for their services, and farm and station hands have no difficulty in obtaining engagements. The following is the ruling rate of wages:

For farm servants, plowmen, \$5 per week; newly-arrived immigrants, \$4 to \$5 per week; married couples, \$5 to \$6 per week; indifferent farm hands, \$4 per week; boys and youths, \$2 to \$2.50 per week; bullock drivers, \$4 per week; all with board and lodging included.

Tradesmen: Blacksmiths and bricklayers, \$2 to \$2.25 per day; brick-makers, \$3 to \$3.25 per thousand; cabinet-makers, \$2 to \$2.50 per day; engineers and iron-founders, \$2 to \$2.75 per day; plasterers and plumbers, \$2.25 to \$2.50 per day; miners, \$1.50 to \$1.75 per day; masons, \$2.50 per day; quarrymen, saddlers, and sawyers, \$1.50, \$1.75, and \$2 per day, respectively; shoemsmiths, \$1.75 per day to \$2.25; tanners, \$2 to \$2.50 per day; tiumen, \$1.50 to \$2.25 per day; watch-makers, \$2.50 to \$3.50 per day; wheelwrights, \$2.25 to \$2.50 per day.

Domestic servants: Housekeepers, \$2.50 to \$3; cooks, \$2.50 to \$3.75; house-maids, \$2 to \$2.50; laundress, \$2.25 to \$2.50, and general servants the same; hotel servants, bar-men, \$4.25 to \$5; bar-maids, \$2.50 to \$3.75; cooks (men), \$5 to 7.50; women, \$3.50 to \$3.75; boots and hostlers, \$3.75 to \$5; all at per week with board and lodging.

Station hands with lodging, rations, and expenses paid to station at per year: Shepherds, \$175 to \$200; hut-keepers, \$150; married couples, \$300; knockabout hands, \$195 to \$225; bush carpenters, \$325 to \$350; men cooks, \$195 to \$225, and in shearing time \$390 to \$500; horse-drivers, \$210; horse-drivers, on roads, \$260; wool pressers, \$260 to \$325; stock-riders, \$260 to \$325; sheep-drovers, \$260; youths, \$130 to \$155.

BANKING STATISTICS.

The banking statistics for the December quarter, 1887, reads as follows:

<i>Average liabilities.</i>		<i>Assets.</i>	
Notes in circulation.....	\$1, 943, 750	Coined metals	\$6, 335, 185
Bills in circulation.....	65, 620	Bullions and ingots	37, 385
Balances due to other banks.....	247, 075	Public securities	102, 200
Deposits bearing interest.....	18, 691, 675	Land and buildings	1, 981, 215
Deposits not bearing interest.....	7, 563, 355	Notes and bills of other banks.....	143, 745
		Balances due from other banks.....	948, 805
Total average liabilities.....	28, 561, 475	Other debts due to banks.....	42, 511, 905
		Total average assets	\$32, 060, 210

The savings bank returns for January last show an increase of 498 in the number of depositors, which brings the total number up to 58,507. The receipts from the depositors during the month amounted to \$487,920, and the repayments totaled \$546,365, which shows a balance of \$58,445 in favor of repayments. Taking the agencies apart from the Adelaide office an increase is shown of deposits over withdrawals of \$43,465. The actual decrease in Adelaide was \$101,910. The large amount withdrawn from the Adelaide branch can be accounted for by the excitement in the mining market at that time. Since January the number of depositors has grown, and so, also, have the amounts deposited.

THE JUBILEE EXHIBITION.

The jubilee of the colony was celebrated by the holding of the jubilee exhibition at Adelaide. The idea of holding an exhibition was first mooted during the acute stage of the depression, which we have just passed through, and the scheme had many opponents. However, through the determination of Sir E. T. Smith it was carried out by private individuals for the public benefit. The Government only paid for the permanent buildings. It was a great success and paid for itself.

The building is a fine structure, situated on North Terrace, from whence the grounds slope gradually down to the Torrens Lake. The site commands a fine view of the hills at the back of Adelaide, and was in every way eminently fitted for the object for which it was selected. The grounds extend over an area of 18 acres, and was more than half covered by the main buildings and temporary annexes. The total expenditure was \$396,000, of which some \$255,000 were spent on buildings, \$50,000 on general working expenses, and \$20,000 on electric lighting. For receipts \$165,000 were received from the Government on account of the permanent buildings. The money received for space was \$30,000; admissions totaled \$112,500, and sundries \$9,500; so that it is estimated that by the time the temporary buildings were disposed of all expenses would be paid.

In the matter of exhibits Great Britain was more numerously represented than any other country, and was well represented in almost every branch of trade. Austria, Belgium, and Germany were also well represented and were fairly successful in the matter of awards.

New South Wales was by far the best represented among the colonies. The exhibits were varied and excellent and included mineral products and gems of great value and beauty. All the countries of Europe contributed to the excellence of the show and Algiers, Fiji, India, Johore, Manila, The Seychelles, and North Borneo were represented by interesting exhibits. To a citizen of the United States it was not a flattering thing to see his country so poorly represented at an exhibition which would have afforded so many opportunities for opening up a trade, which it could easily obtain, but is left without an effort to restrain it, to flow into other channels from which in years to come it will be difficult to divert it. The only exhibit from the United States that attracted any great amount of attention was a centrifugal amalgamator for saving gold from pulverized quartz. It was generally considered a first-class machine, and was far superior to anything else of the kind exhibited. This is the class of thing which considering the growing importance of gold mining in the colony a great trade might be made between here and the States, but unless the business is pushed the trade will go to the other colonies or to England. The following is the number of awards issued to the various countries represented: Austria and Hungary, 94; Belgium, 159; British North Borneo, 2; Denmark, 2; France, 19; Germany, 115; Holland, 2; Italy, 3; New South Wales, 427; Victoria, 516; South Australia, 1,015; Seychelles, 4; Sweden 4; Switzerland 1; United States 90; Great Britain and Ireland, 995; Algiers 1; Canada, 10; Fiji, 5; India, 3; Johore, 3; Manila, 1; New Zealand, 10; Queensland, 4; Tasmania, 13; Singapore, 1.

The attendance at the exhibition numbered 789,672, an average of about 3,700 per day. In proportion to our population the show was more numerously attended than either of those in Melbourne or Sydney. The proportions were Sydney (1879) 158.934 per cent., Melbourne (1880) 154.262 per cent., Adelaide (1887) 254.816 per cent. Taking it altogether the exhibition was a most gratifying success and in no small measure tended to give that impetus to the trade of the colony which it so much needed after the troublesome times it had gone through. It was the first step around the corner and it was speedily followed by the discovery of the alluvial gold diggings at Teetulpa; then followed the discovery of the Barrier silver mines, then a bountiful harvest and finally the revival in the price of copper, so that now the colony stands in a position of greater prosperity than it has at any time since its foundation fifty years ago.

If the colony is able to stand five such disastrous years as those from 1883 to 1887 it must have great resources, and surely in the prosperous times that are now upon us, we may expect to make rapid strides in overtaking the other colonies in the onward march of progress, population, wealth, and civilization.

CHAS. A. MURPHY,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Adelaide, October 29, 1888.

EUROPE.

AUSTRIA-HUNGARY.

PRAGUE.

REPORT BY CONSUL JONAS.

In the gathering and publication of statistics of trade, commerce, and general economy, a strange backwardness and paucity prevails in this country. It is a matter of much difficulty to collect fresh and recent material so as to present even a very superficial and tolerably correct view of the movements of trade and the general condition of business.

EXPORT AND IMPORT TRADE.

As to the export and import trade of Bohemia, it may safely be said that no statistics are known or published, beyond the statements made by this consulate and the United States commercial agency at Riechenberg. All reports concerning foreign trade are merged in the general commercial statistics of the Austrian empire, and whatever may be of any general interest in that regard is fully and ably laid before the Department of State in the commercial reports of the United States consulate-general in Vienna.

The declared exports from the consular district of Prague to the United States in the year 1888 were \$3,091,044.81 in value, as against \$2,450,418.47 during the preceding year, showing an increase of \$640,626.34.

The leading articles of export were the same as those enumerated in my report on the commercial relations in 1887, with one addition, namely, raw sugar. Of this article only an amount worth \$35,816.66 was shipped from this district to the United States in 1887, whereas last year it rose to \$403,292.94, thus accounting for more than one-half of the total increase of exports. Besides raw sugar, there was a large increase in the shipment of leather gloves, which rose from \$121,660.97 in 1887 to \$206,644.21 last year; then a moderate increase in the export of buttons, glassware, chinaware, linen, and cotton goods, wood pulp, beer, and a few other articles. Silks and velvets show a marked decline; the same is true of hops, whereas malt appears for the first time in the list of Bohemian exports to America. Carlsbad sprudel salt, a Bohemian specialty, is shipped to the United States in increasing quantities.

In relation to the importation of American goods into Bohemia, there has been no change of any note since my last report on the commercial relations, with the exception of an unmistakable decline in the quantity of genuine American petroleum brought to this market. The correspondence which has recently taken place between this consulate and different American hardware firms or their agents tends to show that the efforts made to introduce American hardware into Austria have so far not met with the desired success. However, one of the leading American agencies in Hamburg says: "We have had more encouragement from our connections in Prague than almost anywhere else in Austria. We have sold agricultural implements in Prague in good quantities."

Attempts to introduce some new American inventions in the hardware line in this market are now in progress. A New York company is also endeavoring to introduce the self-acting shade roller. One of the great railroad lines and the leading tramway company in this country are just giving it a trial, and large orders are expected from them.

CONDITION OF TRADE.

The signs of continued peace in Europe multiplied during 1888, and Bohemia seems to have reaped the full benefit of the good effects thereof on trade in general. A few comparative quotations of ordinary railroad and bank shares will tend to show that the past year was a prosperous period in the business affairs of this country.

The receipts of the railroads of Bohemia in 1888 exceeded those of the preceding year by nearly two million florins.

The Bohemian Savings Bank of Prague, the leading savings institution of the country, had a surplus of 2,200,000 florins, and its reserve fund has reached the enormous sum of 17,000,000 florins.

Among the industrial stock companies, the shares of the Prague Iron Industry Company, show a phenomenal rise during the past year from 202.50 to 302.50—almost 50 per cent. This company paid a dividend of 6½ per cent. for the fiscal year ending June 30, 1888. During the remaining six months of 1888, the company produced and sold 600,000 meter centners of manufactured goods, or about 100,000 more than in the corresponding period of 1887 (the meter centner being equal to 22½ pounds). The production of hard coal from the mines of Kladno and Nyráhan, owned by the company, reached in the same period 3,500,000 meter centners, 150,000 more than in the previous year. The outlook is good for a continuance of this prosperity, and the company will most likely be able to declare a dividend of 9 or 10 per cent. for the current fiscal year.

AGRICULTURE.

The results of Bohemian agriculture in the past year were in spite of the cool and somewhat rainy season highly satisfactory. The crop of wheat, rye, barley, oats, and sugar-beet was considerably larger than the average of the previous ten years; the wheat crop was 19 per cent., the crop of barley 34.5 per cent. higher. The quantity of sugar-beet raised last year was 27,400,460 meter centners, worth at least 27,000,000 florins delivered at the sugar mills.

The export of beet-root sugar from the Austrian empire in 1888 reached 1,406,000 metrical centners, of which about three-fifths came from Bohemia. There has been a considerable decline of the shipments of Bohemian sugar to the East via Trieste since 1886. This decline the exporters charge to French competition, which is said to enjoy the advantage of much lower ocean freights. The new contract recently concluded between the government of this empire and the Austrian Lloyd Steam-ship Company in Trieste, according to the views of Bohemian business men, has not secured to the Austrian export business any relief from the disadvantages under which it is said to labor.

CHARLES JONAS,
Consul.

UNITED STATES CONSULATE,
Prague, February 12, 1889.

Declared exports between the consular district of Pragus and the United States for the year ending December 31, 1888.

TRIESTE.

REPORT BY CONSUL GILBERT.

I have the honor to transmit herewith the report on commerce and navigation for the port of Trieste, for the year 1888.

The total imports into this port during the year 1888 were as follows: By sea \$76,273,142.16, by land \$58,276,724.17; total, \$134,549,866.33.

The total exports for the port were as follows: By sea \$61,378,344.84, by land \$59,684,096.84; total, \$121,062,441.68.

As compared with the trade of 1887 that for 1888 shows an increase of \$2,591,788.91 in imports and a decrease of \$3,561,850.94 in exports.

No American vessels arrived in this consular district during the year 1888, although seventeen vessels arrived in this port during the year direct from the United States, viz, fifteen sailing vessels and two steamers. The sailing vessels represented a tonnage of 8,055 tons, the two steamers that of 3,181 tons. Twenty-two steamers of the aggregate tonnage of 31,649 tons cleared for the United States. The sailing vessel was of 1,236 tons.

Only 165 emigrants embarked during the year at this port for the United States. The routes via Genoa and North Sea ports offer greater inducements both in regard to quicker passages and lower rates.

Movement of all vessels at the port of Trieste, for the year 1888, according to flag and tonnage.

HENRY N. GILBERT,
Consul.UNITED STATES CONSULATE,
Trieste, July 6, 1869.

BELGIUM.

REPORT BY CONSUL STEWART, OF ANTWERP.

COMMERCE OF BELGIUM.

The general commercial movement of Belgium with foreign countries, importations and exportations combined, during the year 1887, amounted to 5,621,900,000 francs, being an increase over the preceding year of 447,100,000 francs, or 9 per cent.

Taken separately, the importations for consumption and direct transit aggregated 2,906,600,000 francs, an increase of 243,900,000 francs, or 9 per cent. over the preceding year, and the exportations, Belgian and foreign goods combined, amounted to 2,715,300,000 francs, an increase over 1886 of 203,200,000 francs, or 8 per cent.

The special commerce of Belgium, that is, the importations of merchandise, for consumption in Belgium, and the exportations of merchandise, the product of Belgian soil or Belgian industry, aggregated in value 2,672,500,000 francs in 1887, being an increase over the preceding year of 155,500,000 francs, or 6 per cent.

Of above amount, 1,431,900,000 francs were importations and 1,240,600,000 francs exportations, being an increase over 1886 of respectively 96,900,000 francs, or 7 per cent., and 58,600,000 francs, or 5 per cent.

For the special commerce the exchanges with the countries of Europe represent 81.4 per cent., and those with America, Africa, and Asia the remainder 18.6 per cent., as against 80.9 and 19.1 per cent., respectively, in 1886.

MODE OF TRANSPORT.

The total transportations of merchandise by sea, in 1887, were 294,500,000 francs or 14 per cent. in excess of those of the preceding year.

The imports and exports considered separately, there was an increase of 82,400,000 francs, or 7 per cent., in the former, and one of 212,100,000 francs, or 22 per cent., in the latter.

In the total transportations by land and rivers there also was an increase over 1886 of 152,600,000 francs, or 5 per cent.

The importations and exportations being taken separately, there was an increase in the former of 161,500,000 francs, or 11 per cent., while in the latter there was a decrease of 8,900,000 francs, or 1 per cent.

The proportional part in the transportation by sea of the general commercial movement was 43.3 per cent., and that of the transportation by land and rivers 56.7 per cent. In 1886 the respective parts were 41.4 and 58.6 per cent., showing that the proportion in the transportation by sea has increased by 1.9 per cent., and that in the transportation by land and rivers has consequently so much diminished.

There has been a steady increase from year to year in favor of the transportation by sea. In 1877 the proportion was 35.9 per cent. by sea and 64.1 per cent. by land and rivers.

Table A gives the special commerce of Belgium with all countries in alphabetical order, showing the amount and proportion with each.

TRADE WITH THE UNITED STATES.

The accompanying Table B shows the commercial movement between Belgium and the United States, giving the quantities and values of the different articles imported and exported during the years 1886 and 1887.

It is seen that the total importations from the United States have increased from 160,400,000 francs in 1886 to 164,900,000 francs in 1887—4,500,000 francs or 3 per cent.

This increase was principally in the following articles:

Drugs were imported to the value of 4,687,000 francs in 1887, while the year preceding only to the amount of 54,000 francs were received.

Grain of all kinds.—The increase for 1887 was 39,549 tons or 3,625,000 francs in value, or 5½ per cent.

Flour, bran, and meal had an increase of 7,126 tons, or of 2,850,000 francs in value, 50 per cent.

Rosin and bitumen.—The importations have increased by 6,852 tons, and in value by 1,850,000 francs, or 72 per cent.

Vegetable oils, not alimentary, had an increase of 2,351 tons, and in value of 1,693,000 francs, nearly 100 per cent.

Rice.—Of this article, nothing came from the United States in 1886, while 2,891 tons, or to the value of 1,163,000 francs, were imported in 1887.

Grease.—The increase for 1887 was 1,517 tons, or 1,077,000 francs in value, nearly 11 per cent.

Textiles, raw, not specified, had an increase of 460,000 francs in value, or over 250 per cent.

Sirup and molasses had an increase of 3,034 tons, or of 353,000 francs in value, or 40 per cent.

A decrease is marked in the following articles:

Petroleum, refined, to the extent of 49,490 tons, in value 8,413,000 francs, or 29 per cent.

Oil seed had a decrease of 8,950 tons, or of 2,506,000 francs in value, nearly 80 per cent.

Copper and nickel.—The decrease in this article was about as large as in the preceding one, proportionally, 575 tons, in value 1,267,000 francs.

Hemp, tow, and flax show a decrease of 939 tons, amounting in value to 823,000 francs, 97 per cent.

Minerals, ore, had a decrease of 758,000 francs, in value 86 per cent.

Coffee, one of 942 tons, or of 566,000 francs, in value 55 per cent, and *vegetable substances, not specified*, one of 398,000 francs, in value 28 per cent.

The table shows that the exports to the United States have increased in larger proportion than the imports, having been 49,343,000 francs in 1887, as against 40,647,000 francs, the year preceding showing an increase for 1887 of 8,700,000 francs, or 21 per cent.

The increase was principally in the following articles:

Glass, other than window, 2,798,000 francs, or 11 per cent.

Rags and shoddy, 7,284 tons, or 2,543,000 francs in value, the exports of the preceding year having been insignificant.

Window glass, 7,117 tons, or 1,922,000 francs in value, 26 per cent.

Iron, in bars and sheets, 15,744 tons, or 1,797,000 francs, the amount exported being nearly four times that of 1886.

Steel in bars and crude, 9,905 tons, or 838,000 francs in value, nearly 35 per cent.

Clothing, 759,000 francs in value, about 32 per cent.

Steel, worked, 549 tons, or in value 631,000 francs, but little having been exported in 1886.

Arms, 586,000 francs in value, or 40 per cent.

Minerals, ore, 534,000 francs in value, about 40 per cent.

Thread, 34 tons, or 345,000 francs in value, 230 per cent.

Hemp, tow, and flax, 205 tons, or 282,000 francs in value, the exports of this article having been four times as much as in 1886.

Grease, 322 tons, or 228,000 francs in value, 18 per cent.

Hides, tanned and prepared, 55 tons, or 228,000 francs in value, over 60 per cent.

The articles of export, where a decrease has been experienced, are principally the following:

Sugar, raw.—To the amount of 5,177 tons, or in value 1,501,000 francs, over 60 per cent.

Drugs.—1,281,000 francs in value, nearly 60 per cent. also.

Machines and tools.—1,076,000 francs in value, nearly 70 per cent.

Hides, raw.—555 tons or 1,000,000 francs in value over 50 per cent.

Tissues of flax, hemp, and jute.—802,000 francs in value, nearly 60 per cent.

Chemicals.—415,000 francs in value, 22½ per cent.

Tissues of wool.—45 tons, or 409,000 francs in value, 23 per cent.

CUSTOMS DUTIES COLLECTED.

The duties collected upon the merchandise entered for consumption in Belgium amounted to 23,775,262 francs in 1887, as against 27,850,446 francs during the preceding year, showing an increase for 1887 of 924,816 francs, or about 3 per cent.

COMMERCE OF ANTWERP.

In value the statistics place the total imports into Antwerp, for the consumption and general transit, in 1887, at 1,221,700,000 francs against 1,121,700,000 francs the year preceding, showing an increase, for 1887, of 100,000,000 francs, or 9 per cent.

The exports (special commerce) are given at 466,900,000 francs, in 1887, against 433,200,000 francs, the year preceding, showing also an increase for 1887, of 32,700,000 francs, or at 8 per cent.

Included in the general imports is the direct transit, amounting to 278,500,000 francs, against 252,900,000 francs in 1886, showing an increase of 25,600,000 francs, or 10 per cent.

The transit through the custom-house, also included in the general imports, has increased from 28,700,000 francs in 1886, to 38,100,000 francs in 1887, 9,400,000 francs, or 33 per cent.

Considered by quantities, the imports to general commerce in 1887 amounted to 3,210,820 tons, against 2,867,550 tons the year preceding, showing an increase, for 1887, of 343,270 tons, or 12 per cent.

The differences in the principal articles of import are shown by quantity, in the following table, alphabetically:

The total general transit, in 1887, aggregated 398,846 tons, of which quantities 349,108 tons were by direct transit, and 39,738 tons through the custom-house.

As compared with the preceding year, there was an increase for 1887, in the general transit of 59,986 tons, or 18 per cent. one of 61,585 tons or 21 per cent. in the direct transit, but a decrease in the transit through the custom-house of 1,599 tons, or 4 per cent.

Table C has been compiled from the records of the consulate and shows the value, in United States gold of the exports, from the consular district of Antwerp, to the United States, during the years 1886 and 1887.

The increase, for 1887, was \$370,604.52 or over 20 per cent.

BRUSSELS.

REPORT BY CONSUL SLADE.

GENERAL COMMERCE OF BELGIUM.

The general results of the commercial movement of Belgium with foreign countries during 1887 were superior to those of the preceding year.

The general importations and exportations together amounted to \$1,085,026,700, an increase of \$36,290,300, or 9 per cent. as compared with 1886. The total importations amounted to \$560,973,800, an increase of \$47,072,700, or 9 per cent over 1886. The total exportations amounted to \$524,052,900, an increase of \$39,217,600, or 8 per cent. as compared with 1886.

The foreign products received in Belgium for home consumption added to the products of Belgian soil and industries sent to foreign countries amounted in 1887 to \$515,792,500, an increase of \$30,011,500, or 6 per cent. over 1886. The total value of foreign merchandise consumed in Belgium in 1887 amounted to \$276,358,700, whilst in 1886 it only amounted to \$257,656,000, an increase of \$18,701,700, or 7 per cent. The total value of Belgian products exported amounted to \$239,435,800, an increase of \$11,300,800, or 5 per cent. as compared with 1886.

The total value of the Belgian commerce for the first eleven months of 1888, exports and imports, was \$418,826,212, viz: Imports, \$229,973,782, or an increase of 9 per cent. as compared with the first eleven months of 1887; and exports, \$188,852,430, an amount about equal to that of the first eleven months of 1887. The following articles of importation increased during the first eleven months of 1888 as compared with 1887:

Cattle.....	\$1,184,441	Wheat and buckwheat.....	\$2,583,691
Sheep.....	330,569	Eye.....	924,207
Horses.....	291,816	Barley.....	1,532,685
Oak lumber.....	673,377	Pean, beans, etc.....	368,401
Other lumber.....	1,033,706	Oats and corn.....	1,116,698
Coffee.....	2,683,013	Flour.....	463,764
Butter.....	764,384	Potatoes.....	1,426,656
Rice.....	564,718	Lead.....	336,193
Guano.....	300,596	Raw hides.....	822,180
Iron ore.....	629,750	Soda.....	2,309,824
Flax.....	986,072	Petroleum.....	743,278
Cast-iron.....	766,596	Rosin.....	721,627
Oleaginous grain.....	2,315,223	Wine.....	261,322

The following articles of importation decreased during the same period:

Hogs.....	\$252,444	Lard.....	\$305,159
Meat.....	1,036,032	Hemp.....	783,465
Vegetable oils.....	880,210	Silk.....	502,379
Copper and nickel.....	322,533		

The following articles of exportation increased:

Arms.....	\$305,545	Woolen thread.....	\$614,705
Coke.....	373,841	Hardware.....	812,081
Wheat and buckwheat.....	1,262,606	Steel rails.....	345,856
Flour.....	1,610,355	Other steel.....	279,078
Bread, biscuits, etc.....	255,497	Lead.....	261,322
Rags.....	422,091	Paper.....	378,869
Raw hides.....	2,203,028	Soda.....	619,965
Chemical products.....	454,706	Refined sugar.....	281,201
Woolen goods.....	270,972	Silk goods.....	218,090
Window-glass.....	478,640	Glass ware.....	202,660

The following articles of exportation decreased:

Cattle.....	\$394,801	Machinery.....	\$2,320,063
Sheep.....	253,216	Hemp.....	418,617
Horses.....	228,898	Flax.....	1,099,096
Candles.....	246,847	Wool.....	537,398
Coal.....	721,241	Copper and Nickel.....	429,425
Meat.....	683,923	Rails (iron).....	371,718
Railway carriages.....	582,101	Zinc.....	636,123
Stone (building).....	739,383	Linen goods.....	399,053
Raw sugar.....	1,511,962	Glassware (ordinary).....	363,637

COMMERCE BETWEEN BELGIUM AND THE UNITED STATES.

The importations from the United States into Belgium, which in 1886 amounted to \$30,956,300, increased in 1887 to \$31,321,500, an increase of \$365,300, or 3 per cent. The principal articles of which the importation increased were the following:

Drugs.....	\$394,169	Grain of all kind.....	\$699,625
Flour, bread, etc.....	550,243	Rosin.....	357,060
Vegetable oils.....	326,749	Rice.....	224,459
Lard.....	207,861	Textile fibers.....	88,780
Syrup and molasses.....	68,129		

The following articles decreased.

Petroleum.....	\$1,623,799	Oleaginous grain.....	\$483,658
Copper and nickel.....	244,531	Flax and hemp.....	158,839
Mineral ore.....	146,284	Coffee.....	109,233
Vegetable substances.....	84,727		

The exportations from Belgium to the United States amounted in 1886 to \$7,844,900, whilst in 1887 they amounted to \$9,523,200, an increase of \$1,678,300, or 21 per cent. The following are the principal articles of exportation which increased:

Plate-glass.....	\$540,014	Rags.....	\$490,799
Window-glass.....	370,946	Iron.....	346,821
Steel.....	283,517	Clothes.....	146,487
Arms.....	113,098	Mineral ore.....	103,062
Wooden ware.....	59,837	Flax and hemp.....	54,426
Grease.....	44,004	Leather and hides.....	44,004

The following articles decreased.

Raw sugar.....	\$289,693	Drugs.....	\$247,233
Machinery.....	207,668	Raw skins.....	133,000
Linen goods.....	58,855	Chemical products.....	30,095
Woolen goods.....	78,937		

The following table will show the commerce between Belgium and the United States for the years 1886 and 1887 compared:

Statement showing the commerce between Belgium and the United States for the years 1886 and 1887, compared—

Rags.....	15,485.48	Vegetable fibers.....	3,994.76

The following articles decreased during the same period:

Glycerine.....	\$11,983.81	Harness.....	\$3,027.99
Hatters' furs.....	114,442.40	Oil-paintings.....	1,831.59
Rabbit and sheep skins.....	57,996.71	Tin-foil.....	4,999.83

CHARLEROI.

Declared exports from the consular agency of Charleroi to the United States for the years 1887 and 1888 compared.

Merchandise.	1887.	1888.	Merchandise.	1887.	1888.
Cement	\$45,150.72	\$83,112.97	Nails	\$14.45
Cough drops	74.98	Plate glass	301,376.31	\$375,509.14
Diamonds	154.01	Sulphate	116.39
Dry plates	234.34	Steel	368,600.67	80,421.86
Earthenware	958.86	389.97	Tin-foil	874.81	976.22
Glassware	120.50	Window-glass	1,555,402.29	1,622,280.26
Iron	58,218.87	80,814.04	Total	2,336,282.99	2,368,445.95
Glass tubes	1,404.80	1,095.49	Decrease	72,537.65
Hyposulphite	129.13			
Marble	4,055.21	5,937.04			

AGRICULTURE.

The agricultural depression which has existed for several years in Belgium continues with unabated force. Tracts of land capable of cultivation remain absolutely uncultivated, the expenses involved in their cultivation leaving no margin of profits.

The crops of 1888 were far below the average owing to the wet summer. The potato crop was an almost total failure. In not a single one of the nine provinces was the crop of wheat or rye or barley good.

The result of this continued agricultural depression is an increasing tendency to emigration. At present this emigration is mainly to the Argentine Republic, which in certain cases aids emigrants to reach there.

MINES AND MINING.

The coal mines of Belgium produced, in 1887, 18,378,624 tons (of 2,200 pounds) of coal, the total value of which was \$28,501,082. This production, the heaviest ever produced in the kingdom, was divided as follows:

Region.	Quantity.	Value.
	<i>Tons.</i>	
Hainaut	12,470,060	\$20,826,653
Namur	350,255	441,391
Liege	4,549,309	7,173,028
Total	18,378,624	28,501,082

The quantity of coal extracted in 1887 exceeded that of the preceding year by 1,093,091 tons, and the value of the product by \$990,476. The average selling price per ton of coal in 1887 was \$1.55, a reduction of 4 cents as compared with 1886. The production was furnished by 268 mines, 12 less than the preceding year. There were 100,739 laborers employed in the mines in 1887, an increase of 457 laborers as compared with 1886. They were subdivided as follows:

In the mines:	On the surface:
Men	Men
Women	Women
Boys, under sixteen years old	Boys, under sixteen years old
Girls, under sixteen years old	Girls, under sixteen years old
Total	Total

The total amount of wages paid the laborers in 1887 was \$15,845,300, or an average annual salary per laborer of \$157.30, an increase of \$6.18 as compared with 1886. This average annual salary in the different regions was as follows:

Region.	1886.	1887.	Increase.
Hainaut—Mons	\$137.42	\$140.32	\$2.90
Hainaut—Center	157.80	164.44	7.14
Hainaut—Charleroi	147.07	153.05	5.98
Namur	132.40	140.20	8.49
Liege	167.36	175.63	8.36

The average daily salary (men, women, boys, and girls both in and out of the mines) was 54 cents.

$$\frac{\$157.30}{0.54} = 290 \text{ working days.}$$

This salary is divided as follows: Laborers on surface 43 cents, and laborers in mines 58 cents. By calculating the daily average wages of women, boys, and girls, respectively, at 55, 28, and 24 cents, the daily average wages of the laborers above sixteen years of age in the mines would be 63 cents.

The working expenses of the mines were :

Wages.....	\$15,845,300
Other expenses.....	10,963,769
Total	26,814,069

Making the cost price per ton \$1.46, or 8 cents less than in 1886. The total value of the coal extracted in 1887 was \$25,501,082, which leaves a net profit of \$1,687,013; an increase of \$692,570, as compared with 1886. The mines were divided as follows:

90 profitable mines (profit).....	\$2,699,997
50 losing mines (loss).....	402,984
Net profit.....	1,687,013

The following table shows the results of the coal mines of Belgium for the years 1861 to 1887:

Year.	Product.	Profit- able mines.	Profit.	Losing mines.	Loss.	Net profit.	Laborers.		Selling price of coal per ton.	Extraor- dinary ex- penses.
							Number.	Average annual wages.		
	<i>Tons.</i>

WILLIAM SLADE,
Consul.

UNITED STATES CONSULATE,
Brussels, February 5, 1889.

GHEENT.

REPORT OF CONSUL BUTTERFIELD FOR THE YEAR 1887.

Although, so far as this consular district goes, it can not be said of the year 1887 that its commercial prosperity has been very remarkable, although final results have proved moderately satisfactory, considering the repeated threats of impending war and their consequent disturbance of business. The competition in all branches of agriculture has been a heavy strain, to ease which it will be necessary for Flanders to put forth her best effort. The improved machinery of America and the immense resources of unlimited areas are surely driving to the wall, all (and in these provinces I am told they are many) who yet cling to the methods of the past. Again, commerce is more and more affected by the ever increasing duties imposed on foreign goods by such countries as France, Germany, and Italy. Belgian manufacturers depend to such an extent on foreign markets that if these close disaster must stare them in the face.

SAMPLE MUSEUMS.

I have to mention the fact that the district of Ghent is indebted to the Government for the establishment of a branch of the Brussels Museum of Samples. Thanks to this organization, whereby manufacturers are enabled to practically judge of the requirements of the countries with which they desire to trade, profitable enterprise has been in many cases successfully fostered. This idea is one which might perhaps be advantageously considered at home.

I will now proceed to give a separate account of the various trades and manufactures.

LINEN TRADE.

This branch continues to feel the effects of the commercial crisis. It seems as though linen, were steadily losing ground with the consumer, whose favor is now more generally given either to wholly cotton fabrics or to those of mixed flax and cotton. Overproduction of linen yarns has caused such a depreciation in value that many manufactories have had to close. This, although the natural remedy for a situation unstable and ruinous, has been accompanied by keen complaints and loud demands for more protection. This expedient, however, would probably be a harm rather than a benefit to Belgian linen, since the production in excess of the country's wants is so great that if confined to the home markets seven-eighths of the flax machinery would stand idle.

As to linen-weaving, there has been practically no change; for if, on the one hand, home sales have diminished, foreign ones have increased. Raw materials being cheap, linen has never been produced under more favorable conditions; but it is a fact to be regretted that the better class of such goods—the staples of Flanders—has been less sought than the inferior qualities. The manufacture of linen mixed with cotton is now excessive. Its production in the last year amounted to 12,000,000 meters, considerably more than the demand, whence a gradual sinking, the end of which is not yet.

JUTE TRADE.

Jute-spinning, which, like linen, has also suffered, is now improving, and the demand continues well sustained. Jute weaving, in contrast to 1886, has kept all the looms going. Prices, too, have kept up, although raw materials have been more than usually expensive. The present development in this direction is not sufficient to meet its opportunities, as is shown by the well-known fact that, owing to a restricted plant, large and lucrative orders have been passed to Scotch competitors.

COTTON TRADE.

During 1887, the cotton-spinning mills worked regularly, and large operations were satisfactorily transacted. In January and February the political outlook affected trade so far that even double-folded yarns, usually very firm, were slightly affected. But in March came a rapid change, inaugurated by a rise of the raw stuff. American cotton joined in the movement, and by the end of the month its yarn had risen 2 cents a kilo. During the summer, things became quieter; consumers were working under contracts, and moreover the rise had stopped short of the manufactured article. In August Walloon mills offered their products at a loss of 1 cent, and then of 2 cents, per kilo, when of course Flenish spinners had to follow suit. In October greater firmness characterized the market, which remained thus settled.

It is said on good authority that during the year no less than 40,000 new spindles were put into operation. However, future prospects are not deemed very encouraging. A constant threat hangs over the spinners in the shape of a proposal for the reduction of the duty on cotton yarns, while all branches feel the effects of the commercial crisis. Goods are often sold at absurdly low prices; and, as in the case of thread, it is not that too much of it is produced, but that the buying capacity of consumers is sadly impaired. The agricultural element is approaching ruin, and thus manufacturers are deprived of their truest customers.

In hosiery, work is not wanting, but prices are insufficient. The wages of women-knitters barely suffice to provide the necessities of life (at times less than 15 cents per diem).

Cotton-weaving is steadily decreasing, and unless energetic measures of a protective character are taken by the Government, it is considered that this industry will soon disappear.

Dyeing in its relation to cotton tissues is also in a precarious state, owing to the extremely active home and foreign competition.

THE SUGAR TRADE.

Owing to the persistent drought in June, 1887, the outlook grew unfavorable, and the beet crops failed to a large extent (20 to 40 per cent. in the several countries of Europe). Sugar-beet then rose from 30 to 41 francs per bag. In spite of these fluctuations, no general improvement can be reported in this district, and yet other sugar manufacturers and refiners have gone to the wall. In Belgium ten years or so ago there were 173 sugar factories in active operation; now (December, 1887) there are but 102, which fact is of itself a sufficient commentary. To the scarcity of the beet and to its poor quality—three-fourths to 1 per cent. poorer in saccharine matter than the crop of 1886—must be largely attributed the unfavorable results of the year.

THE GHENT DISTILLERY.

The production of whisky, gin, etc., for the year 1887, was 66,246.46 hectoliters, on which a tax of 784,199.59 francs was paid to the Government. The figures for the year previous were 66,888.04 hectoliters, on which 848,811.44 francs were paid to the Government. Decrease in 1887, 2,641.58 hectoliters, which would pay 64,611.85 francs Government tax.

In this connection it may be mentioned that distillers have now commenced to import barley direct from Russia.

THE BREWING INTEREST.

Owing to the cheapness of hops this branch is one of the few really prosperous industries, and it is officially stated that in the province of Eastern Flanders alone there are 534 breweries. If satisfactory to the brewers, this state of affairs is not so to the hop-growers who oftentimes have had to sell their products as low as 20 francs for 50 kilograms. This depreciation is due to over production in other countries, and

to its unrestricted entrance into Belgium. This is particularly true of German hops of low grade—admitted free—while Belgium hops are charged 10 marks for 50 kilograms when imported into Germany. Accordingly hops are being abandoned, as in the District of Alost, where the yield for 1887 was but 22,000 bags of 100 kilograms, or about 18,000 compressed bales of the mean weight of 125 kilograms, as against 44,000 bales in 1886 representing nearly 36,000 compressed bales.

CONSTRUCTION OF MACHINERY.

There is a better tone pervading all branches of this business except locomotive building. This is due to lack of Government orders, on which machine-makers have unluckily to depend.

WOODEN-SHOE TRADE.

This business has its greatest importance in what is known as the "Waes country," lying between Ghent and Antwerp, and bounded north and south by the curve of the Scheldt. There are said to be no less than a thousand master wooden-shoe makers, whose aggregate sales amount to over 7,000,000 francs per annum. These makers have organized themselves into a company for the purpose of extending their operations. So successful have they been in disposing of their stock that Canadian poplar, the principal material used, has considerably advanced in price, now fetching 15 to 20 francs a cubic meter.

THE LUMBER TRADE.

The total number of vessels loaded with lumber reported at this port for the year 1887 is as follows:

Years.	Vessels.	Tonnage.
1887.....	114	47,193
1886.....	89	34,408
Difference	25	12,785

The above warrants the conclusion that the year has certainly been favorable to the lumber dealers.

AGRICULTURE.

Agricultural results will be best understood by a comparative table of crops for the three years 1885, 1886, and 1887. The hectare is taken as the basis of area; hectoliters or kilograms as the measurement of production: i. e., so many hectoliters or kilograms to the hectare.

Kind of crops.	1885.	1886.	1887.
	<i>Hectol.</i>	<i>Hectol.</i>	<i>Hectol.</i>
Wheat.....	27.54	24.4	23.59
Rye.....	29	23.5	30.22
Barley.....	40	37.2	43.59
Oats.....	43	47.55	37.86
Buckwheat.....	18	23	18.25
Peas.....	20	25	26.5
Horse beans.....	10	28.33	23.87
Colza.....	24	21.3	28.6
	<i>Kilogr.</i>	<i>Kilogr.</i>	<i>Kilogr.</i>
Potatoes.....	21,410	18,100	19,045
Carrots.....	5,680	18,500	7,533
Turnips.....	5,000	19,770	5,825
Sugar-beet.....	23,333	31,000	26,000
Cattle-beet.....	28,888	41,950	33,545
Red clover.....	30,366	41,200	24,333
Carnation clover.....	20,000	23,166	17,166
Lucern grass.....	30,000	37,500	27,500
Hay.....	4,818	4,580	4,075
Flax.....	607	6,324	6734
Hemp.....	1,250	1,060	860
Hops.....	950	1,300	1,550
Tobacco.....	2,000	3,250	2,300
Succory.....	20,000	19,600	12,400

An inspection of the above will show that certain autumn cereals were more than usually successful, while such summer crops as clover and hay-grass were tried by the continued drought. Flax proved of a superior quality. Likewise hemp and colza, while carrots, beets and chicory gave less than usual. Turnips were a failure.

THE IMPORTATION OF FERTILIZERS.

But a few years ago guano held a monopoly; but at present English sulphates of ammonia are fast driving Peruvian guano out of the market. The direct importation of Chilean nitrates of soda has also commenced, and in 1887 the arrival of a ship-load of 1,100 tons of Chilean nitrates was considered worthy of special note. The year 1888 (now closing) has seen a decided extension in this branch of commerce.

MARITIME COMMERCE.

The following tables give the main points of the situation for the year 1887:

Vessels entered at Ghent.

Nationality.	Number.	Tonnage.	Nationality.	Number.	Tonnage.
Danish	11	6,100	Norwegian	23	7,543
Dutch	6	2,013	Russian	15	5,506
English	668	280,000	Swedish	25	7,953
German	68	2,909			
Italian	1	452	Total	817	344,936

Six hundred and sixteen of the above 817 vessels were loaded with divers merchandise; 114 with lumber; 29 with flax and flaxseed; 8 with raw cotton, and 10 in ballast.

During the same year 822 vessels cleared from this port. Their total tonnage came to 346,376 tons, while their cargoes were as follows:

General cargo	634	Zinc	2
Ballast	136	Fruits	2
Bran	14	Bricks of coal	1
Phosphates	13	Window-glass	1
Suocory	4	Pig-iron	1
Paving stones	4		
Tiles	5	Total	822

CONCLUSION.

In bringing this report to a close, in justice to myself I must mention the fact that the main source of information, the one on which my predecessors have invariably depended for the necessary figures (especially those of the imports and exports), has utterly failed me in my work. The "Cercle Commercial et Industriel de Gand" has for years past, at this season, prepared and published for the benefit of subscribers a report dealing very fully with questions commercial or industrial, statistical and otherwise. This year, however, its report has not appeared, and inquiries of the club's secretary elicited the statement that it probably would not be published at all, owing to the listless indifference of those having the matter in charge.

Under these circumstances, I thought it useless to wait further, but rather to prepare a report with such material as was at my command.

F. W. L. BUTTERFIELD,
Consul.

UNITED STATES CONSULATE,
Ghent, November 30, 1888.

DENMARK.

REPORT BY CONSUL RYDER, OF COPENHAGEN.

I have herewith the honor to present a report on the trade movements of Denmark with foreign countries in the year 1887, and in transmitting the same can not refrain from repeating my regrets that the statistical department of Denmark should allow so long an interval to elapse before the publication of these tables, as they are thus deprived in great degree of the value to which they would otherwise be entitled.

Upon review of these statistical returns it is satisfactory to observe that a great improvement is to be noticed in the foreign trade of Denmark in 1887 as compared with the preceding year, as also when placed in comparison with the movements of the previous five years' average of 1883-'87, with the sole exception of a slight decline in the value of the imports and which may easily be accounted for by the diminished market value of many of the principal articles of import in 1887 upon the prices of the preceding years; the collective values of Denmark's imports and exports with foreign lands having amounted, as will be seen on reference to annexed Table I, to 438,500,000 kroners in 1886; and against 433,890,000 kroners for the five years' average of 1883-'87; and it is at the same time very satisfactory to observe that the exports of the home products in 1887, both as regards volume as well as value, are in excess of those of the foregoing year; as also of the five years' average of 1883-'87 of these products, there having been exported, in 1887, 759,000,000 pounds, of the value of 158,500,000 kroners, against 754,000,000 pounds, of the value of 142,800,000 kroners, in 1886; and against 726,000,000 pounds, of the value of 150,760,000 kroners, on the average of the five years, 1883-'87.

Turning next to the value of the kingdom's trade in 1887 with foreign countries when taken individually, in comparison with the year 1886 and with the average of the five years of 1883-'87, it will be seen, from annexed Table II, that Germany and Great Britain, the same as in previous years, continue to maintain their prominent positions, inasmuch as two-thirds of the foreign trade of Denmark is monopolized by the two countries. When taking these two countries separately, there is, however, this peculiarity to be noticed: That whilst the volume of the trade with England in 1887 has been more than double the amount of that with Germany, namely, of 1,008,741 registered tons against 483,361 registered tons, that on the other hand the value of these trade exchanges is quite the reverse, the value of the collective trade with Germany in 1887 having amounted to 150,729,773 kroners, whilst that of England was only of 138,770,838 kroners, which is easily explained by the nature of the goods imported from the two countries, the imports from England, consisting largely of articles of heavy weight and low value, such as coals, raw metals, etc., whilst those from Germany are of less weight but much more valuable nature, such as manufactures, colonial, wares, etc.

As regards the trade with the neighboring Scandinavian lands, it will be seen that in 1887 the collective interchange of goods with Sweden has been of the value of 58,000,000 kroners, and with Norway of 12,300,000 kroners, that is to say respectively of 3,600,000 and 3,200,000 kroners less than on the average of the five years, 1883-'87, and in both cases the decline is found to have fallen principally on the exports from this country, and it is much to be feared that the protectionist tariff which last year received the sanction of the Swedish chambers, may be expected to affect still more injuriously the trade movements with that country.

In the commercial relations of Denmark with the United States, the imports into this kingdom play by far the most prominent part; the average value of the imports in the five years 1883-'87, amounting to 15,300,000 kroners; the exports of the average for the same period amounting to only 2,800,000 kroners, whilst these imports in 1887 were of the value of 14,900,000 kroners, or a slight decline of 400,000 kroners on the five years' average. The value of the exports to the United States is seen to have remained without change. The principal articles of import and export to and from the United States will be found in annexed Tables III and IV.

From Russia there was imported in 1887 for the value of 15,900,000 kroners against 13,500,000 kroners on the average of the five years, 1883-'87, thus showing increased imports of 2,400,000 kroners, falling specially upon the articles of rye, oil-cakes, and seeds; whereas the imports of wheat met with a decline of 1,250,000 kroners. The exports from this country to Russia are but trifling, amounting to 2,500,000 kroners.

In the trade interchange with the remaining foreign lands it may be sufficient to observe that the no inconsiderable imports of barley into Denmark from Africa (Algers) in the year 1885 to the value of 700,000 kroners have still been continued in the succeeding years of 1886 and 1887, and that in 1887 a larger importation than usual of coffee was received direct from the Brazils to the value of about 500,000 kroners.

Turning next to the groups of most important wares imported into the kingdom, such as colonials, drinkables, manufactures, metals, etc., it will be seen from annexed Table V that the collective imports of colonial goods in 1887 were of 103,400,000 pounds of the estimated value of 23,800,000 kroners; thus showing a small advance as compared with the five years' average of 1883-'87 respectively, of 200,000 pounds and 700,000 kroners. Whilst a great increase will be found to have fallen upon the imports of rice in 1887, namely of 38,000,000 pounds, against 28,600,000 pounds for the five years of 1883-'87, a decline on the other hand is to be noticed in the imports of coffee and sugar. The decline in the sugar imports of late years may, however, at once be explained by the very considerable increase which has been taking place in the home production of beet sugar since 1883, as will be more plainly shown by the following tables:

Imports of foreign sugar and molasses.

	Quantity.	Value.
		<i>Kroners.</i>
1883.....	61,400,000	12,370,000
1885.....	40,480,000	8,300,000
1887.....	41,200,000	8,200,000

Home production of beet sugar.

	<i>Pounds.</i>
1883.....	15,523,241
1885.....	33,897,703
1887.....	43,242,343

The home production having thus much more than fully replaced the gradual falling off on the imports of the foreign article.

Proceeding next to a review of the exports of 1887, the agricultural products of the kingdom, it will be seen, take an absolute prominent position, as these figures with a value of 158,500,000 kroners or 85 per cent. of the total exports, the remaining 29,300,000 kroners being made up with the re-exports of colonials and foreign manufactures. Looking at the different groups of the export lists it is plainly brought to view that Denmark year by year is fast losing her old position as one of the grain exporting lands; and that with the exception of barley and wheat flour all the other grain sorts show an excess of imports over exports, and of foddering stuffs (maize, bran, and oil-cakes) there were imported into the kingdom to the value of no less than 16,000,000 kroners.

On the other hand, however, the agricultural interests in 1887 have met with full requital for the loss of their cereal exports in the increased exports of their live stock and products, with the respective values of 41,000,000 kroners for live stock, and 53,800,000 kroners for their several products; these showing a considerable advance as compared with the years 1885 and 1886. And comparing more especially the exports of provisions in 1887 with the average of the five years 1883-'87, when the surplus exports were only of 40,600,000 kroners, the progressive movement is found to have been very great; and when going still further back to the years 1882-'86, the increased value of the surplus exports in 1887 is found to be no less than 50 per cent.

The increase on the different articles is so considerable that it will surely be of interest to give the following specifications thereon:

The surplus exports.

Articles.	1883.		1887.	
	Quantity.	Value.	Quantity.	Value.
		<i>Kroners.</i>		<i>Kroners.</i>
Pork and hams.....pounds..	14,200,000	6,700,000	45,100,000	17,500,000
Beef and sausages.....do..	700,000	300,000	5,000,000	1,000,000
Butter.....do..	27,100,000	26,800,000	38,100,000	32,700,000
Eggs.....score..	2,600,000	2,500,000	5,400,000	4,600,000

And to this might perhaps in all fairness be added a further increase in the value of these exports, when taking into consideration the great decline in market places which has taken place in most of these articles since 1883.

The great customer for all these products now as in former times, is England, which country takes about 50 per cent. of the Danish exports, Germany coming next for about 35 per cent., the remainder being divided amongst other European lands.

Although the interests of the agricultural classes will unquestionably have been unfavorably affected by the constantly drooping prices of their most important products, nevertheless the results of the general foreign trade of the kingdom in 1887 must be regarded in the light of an improvement upon the trade of the two preceding years; and there is great reason to hope that when the statistical returns for 1888 are brought to the knowledge of the public that this improvement will be found to have met with further favorable progress, so that the agricultural, mercantile, and shipping classes may be in a position to say that they have at last seen the worst of this long period of depression.

HENRY B. RYDER,
Consul.

UNITED STATES CONSULATE,
Copenhagen, April 25, 1889.

Value of Denmark's commerce with each foreign country during the years 1886-'87.

DIEPPE.*REPORT BY CONSULAR AGENT LEBOURGEOIS, FOR THE YEAR 1887-'88.*

NAVIGATION.

The navigation of the port of Dieppe for the year 1887-'88 is as follows:

The tonnage amounted to 995,812 tons against 938,106 of the preceding year. Most of the vessels bore the English flag. Their tonnage amounted to 865,056 tons; Norwegian and Swedish, 74,943 tons.

Steamers still continue to bring the greater part of wood.

IMPORTS.

The following is a table of imports for the last five years:

Articles.	1883.	1884.	1885.	1886.	1887.
Wood.....Kilograms..	107,853,000	122,404,232	95,115,230	91,179,000	105,398,631
Articles made from wood...do..	2,905,758	2,312,000	403,811	620,357	29,522
Wood pulp.....do..			10,026,885	16,506,371	14,513,216
Iron and steel.....do..	22,335,772	16,618,523	11,177,073	213,500	13,426,970
Oats.....do..	974,150			1,422	223,812
Ice.....do..	10,386,110	16,780,000	290,200	254,000	400,000
Pitch and tar.....do..	4,726,477	4,359,000	4,058,008	2,880,150	3,981,000
Whale oil.....do..			9,132	108,567	157,119
Cod-liver oil.....do..	3,417	15,977	17,853	30,390	7,335

There is a passenger service between Dieppe and London by way of Newhaven. There were 68,780 travelers this year against 78,846 of last year, a decrease of 10,066. The vessels belonging to the line from Christiania, Norway, to Havre do not stop at Dieppe any more.

SEA FISHERIES.

The product of the fishery in 1887 amounted to 2,086,994 francs, against 1,942,428.30 in 1886, viz:

	France.
Fresh fish	1,309,240.85
Salt mackerel	126,618.15
Fresh and salt herring	469,922.00
Newfoundland	121,108.00
Total	2,086,994.00

INDUSTRIES AND COMMERCE.

The District of Dieppe contains factories for the manufacture of paper and wood pulp, oil mills, factories for spinning and weaving of cotton, saw-mills, and manufacturing of clocks and chronometers.

There has been very little change in the state of trade from the preceding year.

Only fishing boats are built at Dieppe.

The chalk from the cliffs is used to manufacture Spanish white, and the pebbles on the beach for making porcelain.

The work of improving the port still continues.

R. LE BOURGEOIS,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Dieppe, October, 1888.

DUNKIRK.

REPORT OF CONSULAR AGENT MOREL FOR THE YEAR 1888

The statistical reports for the year 1887-'88 show a small decrease in the inward and outward traffic of the port of Dunkirk. Specially in its connection with the United States the inward traffic has been almost exclusively limited to the import of about 25,000 tons wheat, 18,000 tons petroleum oil, which are far inferior quantities to those shown in previous reports. I, however, understand the experience made by some oil manufacturers in getting their oil carried by tank steamers via Calais is such that this latter decrease can only be temporary. There has been no import whatever of American maize and molasses for the whole year, which is due to a serious difference in the value of same articles from Black Sea, Germany.

The export principally consists in empty petroleum barrels, some hundred cases of pipes, wool-waste, coarse wool, etc, these latter goods, being sent via England for want of regular steamers running between Dunkirk and the United States. A very small quantity of old rails has been exported this year, being the remainder of a contract.

The general trade of imports is also less important than in 1886-'87, which, however, is the consequence of an universal depression due to many different causes, which it would be superfluous to enumerate; but it is well to note that the port of Dunkirk has comparatively been standing as well as possible such a bad state of things.

The import of wheat from India, Black Sea, Australia, and United States has not been so much affected by the rather high duty raised in order to protect French agriculture as by the satisfactory crop in France. The prospects for current year are quite different, as the crop in France is expected to be most unsatisfactory. On the other hand, the trade with the Black Sea has much increased, owing to large imports in barley, oats, etc.

Over 65,000 tons of wool have been imported by many regular lines of steamers running between this port and the River Plate, which figure speaks by itself when we consider that the whole wool imported into France six years ago was imported via Havre and Antwerp. This trade had to be directed from those two ports in favor of Dunkirk.

The large northern manufactures of 'Société Anonyme des Acieries de France,' Société Anonyme des Hauts Fourneaux et Forges de Denain et d'Anzin receive large quantities of pyrites and iron, the latter having exceeded 250,000 tons per annum.

But the most serious progress to note is the import of nitrate of soda; about 150,000 tons were brought this year, one-fourth of which is used for industry and three-fourths

for manure. Dunkirk and Hamburg can now be considered the two principal markets of the world. The figures as follows show the proportional part taken by this port in the general import trade for the year 1887: Pyrites, 94 per cent.; nitrate of soda, 90 per cent.; wool, 86½ per cent.; oil-cakes, 77 per cent.; tin ore, 69 per cent.; barley, 61 per cent.; molasses, 52 per cent.; jute, flax, maize, and mineral oil, from 50 to 25 per cent.; grain, iron ore, petroleum oil, less than 25 per cent.

This explains that, by taking as a basis the tonnage of goods imported, Dunkirk keeps the fourth rank in France, coming after Marseilles, Havre, and Bordeaux, the whole quantity of goods imported in 1887 amounting to 1,360,000 tons.

The export amounted only to 390,000 tons, consisting principally of sugar, phosphate, alates, forage, iron, rails, etc. The rails are exported by the above-named firms by quantities increasing every year, as the contracts passed between those manufacturers and foreign governments. Italy, Spain, Brazil are more important. The exports, although regularly increasing, are yet comparatively very small, and will not get the desired extension until our Northern Railway Company feel disposed to reduce the high rates charged for carriage of goods, and thus enable this port to compete with neighboring ports in Belgium, where the railway expenses are as low as ours are high.

FAVORABLE SHIPPING CONDITIONS OF DUNKIRK.

The favorable situation of the port is not only due to the geographical position but also to the continual efforts made by all interested parties, chamber of commerce, corporation of brokers, etc., which do not hesitate in daily imposing large sacrifices upon themselves to facilitate its improvement..

The fact is that they are not only trying to induce merchants to get their goods sent through this port by offering them all possible facilities, lightering free of expenses all ships arriving here with a draught of water which does not allow them to enter the port immediately on arrival, whenever such lightering should be borne by the receivers of the cargo, by exempting from taxes the goods landed, remaining at quay as long as practicable, etc., but they also induce foreign ship-owners to give a preference to this port, where the expenses are comparatively lower than in any other continental port, where there are no light or dock dues whatever, no expenses for weighing cargo, which is weighed by official sworn weighers belonging to the town, at merchants' expense, besides which all ships coming here with the custom of the port to discharge get the most satisfactory dispatch, which never exceeds fifteen running days for largest ships.

The consequence is that, while some years since, Dunkirk was often excluded in charter-parties, I am now aware of many owner of large vessels having agreed to reduction upon the low freights to have their ships sent to this port.

The material improvement of the harbor has been such that there is no fear even for big ships coming in to run any risk. In the years 1886-'87, 75 ships drawing from 21.4 to 23 feet (some over 23 feet) have docked without lightering, and when the improvements are completed, that is in the course of the next two years, vessels of any draught will be able to dock at once on immediate arrival without lightering.

BENJ. MOREL,
Consular Agent.

UNITED STATES CONSULAR AGENCY, Dunkirk, October, 1888.

Imports at Dunkirk for the year ending June 30, 1888.

HAVRE.

REPORT BY CONSUL DUFAIS FOR THE YEAR 1888.

My last yearly report, No. 144, of March 18, 1888, gave such a full description of the port of Havre that I have very little to add this year, excepting that the vast improvements then and already previously contemplated for this port and the estuary of the Seine up to Rouen are still *in statu quo*.

The project was then, as it is now, to spend about 14,640,000 francs upon improvement of the port and access thereto, and 3,260,000 francs for the improvement of the river channel to Rouen, total of 13,900,000 francs.

Of this amount the State was called upon to furnish 10,980,000 francs for the port of Havre and 3,446,000 francs for improvement of the River Seine. The remainder is to be contributed by the department of the Seine inferieure, by the cities of Havre (400,000 francs), Rouen (200,000 francs), and by the chambers of commerce (Havre, 2,496,000 francs; Rouen, 709,500 francs). In other words, the government is to contribute three-fourths and Havre and Rouen together one-fourth.

After many conferences of the authorities of both rival cities and all sorts of committees the present government adopted this plan and brought it before the Chamber of Deputies which passed it, but being rejected by the Senate on the ground that the cities of Havre and Rouen did not contribute enough, and that a corresponding tax should be levied upon vessels and goods the project is again in abeyance until Chamber and Senate can be brought to the same way of thinking.

Increasing harbor and other dues over and above what they are now would drive away trade already trammelled by the monopoly of the Western Railroad of France, the only means besides the river of communication with the interior and foreign countries.

The plan of improving the port of Havre is as follows:

(1) The construction of a vast tidal receiving basin for refuge accessible at any stage of the tide for vessels drawing 8.80 meters, or 29 feet.

(2) Dredging a deep channel, guarded against encroachment of sand or mud in the estuary of the Seine.

(3) Preservation of the present deep entrance or forming a new one elongated in the same direction.

(4) Dredging a new channel as well inside as outside, approaching the port so that the largest vessels may freely pass, in the beginning at least during six hours of each tide and afterwards at any hour.

(5) Modification of the tidal basin and of the entrance to the Basin del'Eure so that the steamers of the Transatlantic Company may leave or enter without loss of time or danger, nor interfere with vessels frequenting other docks.

(6) The construction of a half-tide basin accessible during at least six hours each tide for vessels drawing 8 meters (26 feet 3 inches), and at any time for such drawing 5 meters (16½ feet), which form the majority of trading-vessels frequenting this port.

(7) Construction of jetties, permitting the largest vessels taking refuge or calling for orders.

(8) Reservation of necessary room to construct future docks accessible to vessels of the greatest draught at any time of the tide.

The improvement of the navigation of the lower Seine is planned as follows:

(1) Forming a channel in the estuary of the Seine, lighting and buoying it to make it safe by day or night.

(2) Deepening the channel by means of dredging and diking, so as to permit vessels drawing 7 meters (23½ feet) and 5 knots speed to reach Rouen on the same tide, with the prospect of a further dredging to 8 meters (26 feet, 3 inches).

A great improvement has been adopted in the discharging of vessels, particularly such as arrive cotton-laden. For half a century cotton has been weighed out of the ship on one scale only; consignee and ship having each a clerk present taking weight, whilst now two scales are being employed, so that from 1,000 to 1,200 bales may be weighed out in one day.

VITAL STATISTICS.

The population of Havre has not been counted since 1886, when it was found to have been 112,074 exclusive of garrison sailors; it is now probably in the neighborhood of 114,000.

Births in 1888: males, 1,901; females, 1,786; total, 3,687; total in 1887, 3,616.

Deaths, in 1888: males, 2,197; females, 1,760; total, 3,957; total in 1887, 3,703.

Marriages: in 1888, 993; in 1887, 944.

Divorces: in 1888, 45; in 1887, 33.

The death-rate in 1888 was 35.3; at Honfleur, 28.7; at Caen, 31; at Trouville-Deauville, 24.3; at Fécamp, 22.5, per 1,000.

Havre being mostly built on a flat plain at the foot of the Heights of Ingouville, (la côte) the slope being covered with dwelling-houses, with very defective or no drainage at all, the soil of the town is more or less saturated with unhealthy matter; hence at times an unusual amount of typhoid fever. Continual improvements, however, particularly in the water supply, are tending to ameliorate the sanitary condition of the city.

DUTIES.

The customs duties collected at Havre (including 307,870 francs for navigation dues, 148,300 francs for statistical dues, and 32,700 francs for duty on salt) were 10,285,000 francs, against 9,498 700 francs in 1887, and 9,169,300 francs in 1886.

The octroi duties, or tax on articles entering the town for consumption, levied by the city, amounted to 715,336 francs, against 747,000 francs in 1887, showing an average of 6 $\frac{1}{10}$ francs per head.

INDUSTRIES.

The Société des Forges et Chantiers de la Méditerranée, which, in their ship-building and war-material yards combined, employ about 3,000 men, launched during 1888 a cargo-boat of 2,500 tons, 3 torpedo-boats, for the Roumanian Government; and 8 iron barges, of considerable tonnage. They had under way 2 iron-clads, of 4,000 tons each, for the Greek Government, and 3 cargo-boats of 3,000 tons each. They delivered 12 cannon to the war and 38 to the French navy departments, 24 for Greece, 3 for Spain, and 5 for Japan; and in the second half of the year had under way 90 cannon and 3 mitrailleurs.

The yard of Aug. Normand & Co. constructed 5 torpedo-boats of 50 tons each. It is to be remarked, that whilst three torpedo-boats constructed for the French Government in other yards were lost at sea, those coming from Normand's yard have proved themselves good sea-going boats, properly balanced.

A large steam flouring mill has been completed here, which, for want of proper capital, had to change hands, and is now in successful operation.

The sugar refinery of Acher & Co., which had been shut down for a very long time, has recommenced working.

EMIGRATION.

The annexed table will show an increased emigration, not so much to the United States as in that to the Argentine Republic; the increase being almost entirely in the French nationality, owing to the assistance given to emigrants by the Argentine Government.

Total.....	489,489	556,632	116,104	661,875	655,736	183,247

The salient feature of the above table is the falling off in the importation of East India cotton in 1888 from that of the previous year, which is to be ascribed to the relative cheapness of American cotton.

Coffee, for which Havre is the leading market in Europe, presented, during the year 1888, remarkable fluctuations. The stock, which at one time in 1885 rose to 1,214,000 bags, gradually fell in 1886 to 728,000, and in 1888 to 300,000 bags; in March the price had declined to 62 francs for standard Santos, rose in April to 80 francs; was 73 francs at the end of June, and with variations rose at the beginning of December to 111 francs, closing with the year at 98 francs.

Wool manufacturers being mostly in the north of France, they draw their direct supply principally by the port of Dunkirk. Importations this year from Buenos Ayres have doubled, while those from Montevideo have greatly fallen off; such wool as well as Russian being supplanted by Buenos Ayres wool.

Price of wool for forward delivery has been quoted, January 1, 1888, 150 francs per 100 kilograms; July 1, 160 francs, and December 31, 167 francs.

UNITED STATES CONSULATE,
Havre, September 4, 1889.

F. F. DUFAYS,
Consul.

ROUEN.

REPORT BY CONSUL WILLIAMS FOR THE YEAR 1888.

Commercial rivalry between Rouen and Havre.—The chambers of commerce in France exercise much influence over legislation, although the interests of one section often conflict with those of another. Such a strife has existed for a long time between the ports of Havre and Rouen, the former a coast port, the latter an interior port accessible by the Seine. The appropriations for the improvement of these harbors and their approaches have been jealously watched by the business men of both cities. The re-

sult has been, what might have been expected from such a policy, great delay, much loss on account of unfinished work, washed away and destroyed by the elements, and navigation more or less jeopardized.

Havre has but one outlet by railway, and that leads to Rouen. Rouen has diverging lines in every direction connecting with its quays, and equal facilities of water communication, and is 56 miles nearer Paris than Havre, and vessels can come up the river as quickly and reach their docks as they can enter the interior basin at Havre.

After a long and bitter controversy the wise conclusion has been arrived at that there was plenty of business for both ports, and a *modus vivendi* has been adopted, which provides for the steady and proportionate progress of the harbor improvements of each port. Much of the credit of this arrangement is due to the well-directed efforts of the préfet of the Seine-Inférieure, who acted the part of an intelligent and unprejudiced arbitrator, and had the confidence of both parties.

Harbor improvements.—The general bill provides for the improvements of the ports of Havre and Rouen. The whole sum to be expended is 96,150,000 francs, of which the State is to pay 72,112,500 francs, to be advanced by the chambers of commerce the two cities proportionally and repaid in fifteen years. The city of Rouen, in addition, subscribes 100,000 francs, the chamber of commerce 3,547,180 francs, and the general assembly of the department 500,000 francs, to the whole project.

The improvements of the Seine will consist of alterations of the bed and repairs and extensions of the dikes, and dredging, to be completed in nine years, and provide 22½ feet of water at neap, and 27½ feet at spring-tide to vessels ascending the Seine.

The slip of 90 meters (295 feet) in length will be able to accommodate a vessel of 394 feet in length and will probably be completed this year.

The petroleum basin is nearly completed and a portion is already available. The laying of rails on the quay follows steadily the completion of each section; 2,470 feet have been laid on the right, and 2,618 feet on the left, bank of the river since my last report.

The new stone and steel bridge replacing the suspension foot bridge between the maritime and river basins was finished and thrown open to the public this year, and is a strong and well-finished structure, and greatly relieves the pressure of traffic hitherto confined to one bridge.

Harbor dues and customs receipts.—The chamber of commerce, in view of these proposed reforms, has modified its tariff as follows: The mole dues are fixed at 40 centimes (8 cents) per registered ton for all vessels passing Fatonville, and the port has fixed it at 35 centimes (7 cents) for all vessels passing the kilometrique post. The increase last year in custom receipts amounted to 4,556,084 francs, exclusive of navigation dues, the whole amount received being 23,722,415 francs. The octroi dues were 3,934,275 francs, an increase over the previous year of 10,465 francs.

Petroleum.—There has been an apparent falling off in the receipts of petroleum, but in reality as much as usual has arrived, as several vessels have discharged their cargoes of this article in whole or in part at Havre.

The freight on petroleum has ruled low, varying from 1s. 6d. to 2s. 6d. sterling per barrel. It suddenly advanced to 5 shillings per barrel, which accounts for the fact that for the first time in several years quite a number of American vessels have arrived and are en route for Rouen.

Export of horses to the United States.—There have been large shipments of horses for breeding purposes to the United States, and these horses have been uniformly selected with the greatest care and must tend to materially improve the breed in America.

A hard-book of the pure Norman breed has been recently published, and offers facilities to stock purchasers for obtaining this most valuable breed of cattle, better adapted to many parts of our country than many others which receive more notice. A census of horses was taken during the year in the department of the Seine Inférieure; the total number was 85,969. There were in the arrondissement 20,144 and in the town of Rouen 2,623.

Births and deaths.—The births last year were 2,997; deaths, 3,767; marriages, 772; divorces, 26. The excess of deaths over births was less than in the former year, when the difference was 1,082.

Emigration.—Emigration is very small, as extreme poverty does not exist to any extent, and the French of Normandy do not care to leave it.

Cattle food.—Some efforts were made to introduce American preparations of cattle food, but were not followed up, as they should be to insure success. It is certain that if they would bear investigation they would meet with success.

Cotton industry.—The cotton and other industries have been affected by the fluctuations in raw materials more than anything else, and have in some instances been obliged to curtail working hours, but rarely to suspend operations entirely. The effect of the partial destruction of crops in Algeria by grasshoppers is sensibly felt in this market, where a large supply of cotton prints are manufactured solely for that market.

Crops.—The grain crop of this consulate is very important, and has been affected by the cold and wet weather which prevailed during the summer months.

The winter wheat when threshed will show a grain shriveled, and much inferior in quality and quantity to the usual crop. The estimate of shrinkage is difficult to determine, and studious efforts are made to underestimate it.

The root crop and second hay crop, as well as a large portion of the first crop preserved by ensilage, will supply in a great measure the deficiency caused by continuous rain-falls during the season for gathering the hay crop.

The yield of apples is fair. The area devoted to orchards is very large, and the crop is considered second in importance to no other. Very few apples are cultivated for the table, as the French remain in blissful ignorance of the adaptability of the apple to any other use than that of making cider.

Some shipments of table apples were made from Canada and the United States, which met with ready sale among the English and American residents.

Exclusion of American pork.—Efforts are continued to exclude American pork, and the English pork is so closely scrutinized to detect any American traits as to interfere with its sale. Pork raising is on the increase, but the quality does not improve, nor can it until the French can find a cheap substitute for our Indian corn.

EXPORTS.

The exportation of hogs' bristles and brushes from this consular district increases, and I can not account for this unless it is true that inferior flesh produces superior bristles.

The several exports from this consular district show a slight increase, probably owing to greater efforts and concessions to make sales, as this district supplies only a small quantity of similar goods which are furnished by Germany, England, and Belgium to our country, and none of which could not as well be manufactured in the United States.

Indian corn.—The additional tax upon Indian corn is not perceptibly felt at this port, where the arrivals are principally for distillation, which is exempt from additional duty.

Wine.—This port is materially affected by the rupture of the commercial treaty of France with Italy, as many cargoes of Italian wines were landed, and others reshipped to Paris for mixing with French wines; but already a substitute has been found in dried currants and raisins, of which many cargoes have arrived from Greece and the islands of the Archipelago.

CHAS. P. WILLIAMS,
Consul.

UNITED STATES CONSULATE,
Rouen, October 16, 1888

Declared exports from the consular district of Rouen, France, to the United States, during the year ending June 30, 1888.

F. RAINE,
Consul-General.

UNITED STATES CONSULATE GENERAL,
Berlin, June 30, 1889.

COLOGNE.

Report by Consul Warner.

IMPROVED CONDITION OF TRADE.

As an indication of the better condition of trade, His Majesty, in his recent speech opening the Prussian Diet, points to the increase during the year 1888 of 200,000,000 marks in the savings-banks deposits. Referring to the financial situation, the Emperor says that its favorable condition will enable the Government to effect a further reduction of taxation, and to grant other supplies, the consideration of which had heretofore to be postponed. These symptoms of a more prosperous condition of the trade of the country began to manifest themselves in the beginning of the second half of the year 1888. Railways, for instance, were unable to meet the increased demands for transportation. Cars belonging to foreign companies had to be borrowed to provide for the pressing need besides large orders were given for the building of additional ones. The river and canal traffic has been pushed to its utmost capacity, and transatlantic steamers have been so actively engaged that it became necessary to build new and improved steamers.

This additional demand for accommodation has been due to a certain extent to the opening of trade with the colonies acquired by Germany. New companies and industrial undertakings of all kinds and descriptions have been organized, old established firms have been converted into joint-stock companies or have been remodeled and furnished with additional capital for the purpose of extending business, and the readiness and even eagerness with which the public has invested in these and similar concerns has been quite extraordinary. New life has also been infused into the building trade, which has derived considerable benefit from the general improvement

in affairs. In nearly every city and town of any importance in Germany a general tearing down and erecting new and more spacious buildings of modern styles have been in operation with a very large outlay of capital. The improvements that have taken place in this city in this respect are so great that one who saw the city five years ago would scarcely be able to recognize it again.

With exception of a few articles the increase of prices in the German market was greater than in other important markets of the world. In raw materials chiefly the price increased considerably. For instance, coal and coke in the Dortmund district stood as follows:

Months.	Price of coal per ton.		Price of coke per ton.	
	1886.	1887.	1888.	1887.
July	\$1. 19	\$1. 20	\$2. 09	\$1. 71
August	1. 23	1. 21	2. 12	1. 78
September	1. 26	1. 21	2. 36	1. 81

Iron and cotton also rose considerably. It has always been taken as a sign of commercial prosperity, or as a beginning thereof, whenever these two raw materials show an important advance in value.

IRON AND ORES.

The total production of crude iron amounted in 1888 to 4,229,484 tons, against 3,907,364 tons in 1887. In the Siegen district the iron-ore business is still very active; sales for all that can be mined during and over the first quarter of the year have already been made. In spite, however, of this increased demand there has been no appreciable increase in prices, which are noted at present for raw sparry iron-ore \$2.30 to \$2.38; wasted sparry ore \$3.04 to \$3.30; brown hematite \$2.38 to \$2.75; specular iron-ore \$2.50 to \$2.75.

In Nassau ores the business has likewise been flourishing. Appearances indicate a considerable increase in the requirements during the year and a large number of mines that have been idle have been put to work again. There is also a great demand for Lothring ores and the prices for high-grade qualities have risen. Raw iron of all kinds is in active demand. From abroad as well as in the home market the demand for spiegeleisen is increasing and prices have consequently risen, so that spiegeleisen containing from 10 to 12 per cent. manganese, is at present noted at about \$14 per ton. Manufacturers are loth to make contracts for a long period on account of the present outlook of a future rise in prices.

Of the leading articles of iron the exports and imports for the first eleven months of 1888 were as follows:

Articles.	Exports.		Imports.	
	1888.	1887.	1888.	1887.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Pig-iron	127, 151	194, 387	200, 701	144, 068
Iron bars	150, 528	180, 586
Iron rails	104, 938	161, 101
Iron plates	59, 170	48, 595
Iron wire	178, 482	224, 054
Iron-ore	2, 014, 578	1, 568, 497	1, 069, 562	974, 080
Locomotives	5, 518	5, 500
Machinery	61, 422	57, 809
Sewing machines	6, 680	6, 464

In spite of the material improvement in trade the exports declined to some extent, and the inference has been drawn that the German markets were unable any longer to sustain the keen competition from other countries. This, however, does not seem to have been the case, as the German manufactories were fully engaged, and if in some instances the exports were less it was because the home demand was greater, which circumstance enabled the manufacturers to sell at comparatively better

prices. For instance, the export of cotton goods for the eleven months of 1888 amounted to 400,262 cwt. against 544,344 cwt. for the same period of 1887, showing a decline of 144,082 cwt., and of woolen goods the export amounted to 511,538 cwt. against 536,926 cwt., showing a decline of 25,388 cwt.

BEER.

The trade in beer during the past year was very large. A great number of new companies were formed, partly out of old established and prosperous firms, partly an organization of new companies entirely. These projects have found great favor with the public and the new companies have started business under very favorable auspices. The total production of beer in Germany (including Luxemburg) amounted last year to 47,094,377 hectoliters against 45,068,030 hectoliters in 1887. The consumption of beer in 1888 reached 46,172,563 hectoliters, or 98 hectoliters per head, against 94.6 hectoliters per head, in 1887. The excise amounted to 32,298,026 marks, or 5.89 marks per head, in Bavaria, to 8,759,534 marks, or 4.31 marks per head, in Württemberg, to 4,891,045 marks, or 3.05 marks per head, in Baden, and to 1,949,165 marks, or 1.24 marks per head; in all other states in Germany, against an excise in 1887 of 30,674,930 marks in Bavaria, 8,134,590 marks in Württemberg, 4,323,631 marks in Baden, and 1,705,260 marks in all other states in Germany.

MONEY AND FINANCE.

The great turn which commercial affairs have taken of late and the introduction of so many new companies and important financial schemes have of course absorbed a very large sum of money, nevertheless there has been no lack of ready and cheap money, and new projects bearing a good title have been carried out without any unusual difficulty. Great activity has been displayed on the German Exchanges and those German banks which have been charged with the bringing out of new financial undertakings have done so with so much success that they were enabled to pay their shareholders substantially increased dividends. How very successful some of the leading banks have been in their operations will be seen from the present enhanced value of their shares. For instance:

Name of bank.	December, 1887.	December, 1888.
	<i>Marks.</i>	<i>Marks.</i>
Berliner Disconto-Gesellschaft.....	181. 00	236. 50
Berliner Handelsgesellschaft.....	145. 50	175. 00
Starnstädter Bank.....	131. 00	162. 00
Deutsche Bank.....	156. 75	171. 75
Dresdner Bank.....	123. 40	143. 30
National Bank.....	93. 50	132. 75

The total number of new companies brought out since the second half of 1887 amounted to 251, with a total capital of 257,518,000 marks, 64 of which were established in the second half of 1887, with a capital of 71,781,800 marks; 88 in the first half of 1888, with a capital of 57,888,600 marks, and 99 in the second half of 1888, with a capital of 127,847,000 marks. Of these 251 were new companies.

Nature of companies.	No.	Capital.
		<i>Marks.</i>
Railways.....	10	13,400,000
Banks.....	11	48,017,700
Insurance.....	1	1,500,000
Mines.....	13	26,863,000
Building.....	10	8,521,500
Breweries.....	57	48,452,500
Machinery.....	15	14,550,000
Steamers and conveyances.....	10	17,295,000
Spinning and weaving.....	7	7,617,000
Sundries.....	117	67,002,300
Total.....	251	257,518,300

Most of the old companies of good standing have likewise participated in the general improvement, as the subjoined quotations of the shares of some of them show :

Name of company.	December, 1887.	December, 1888.
	<i>Marks.</i>	<i>Marks.</i>
Bochumer Gusstahl-Fabrik	133. 75	191. 50
Dortmunder Union	65. 50	97. 10
Gelsenkirchner Bergwerke	111. 00	186. 00
Hibernia Ber. werke	82. 00	131. 75
Laurahütte Bergwerke	88. 75	131. 60
Rheinisch-Nassau Bergwerke	96. 90	136. 40
Elberfelder Farben-Fabrik	111. 00	183. 00
Gruson Werke	225. 00	289. 75

During the last two or three months especially the business transacted on the Berlin bourse has been of considerable magnitude and prices of some favorite and current securities have risen very rapidly. In fact they have reached a point now which in the estimation of some is higher than circumstances would warrant. The introduction of some new foreign loans direct on the Berlin bourse was a feature of some importance, but the class of securities offered was not altogether of the highest.

The rate of discount of the Reichsbank stood at the opening of the year 1888 at 3 per cent. and at the close of the year at 4½ per cent., to which point it was somewhat suddenly raised. The average rate of discount for the year—

	Per cent.		Per cent.
1882 was	3. 32	1880 was	4. 24
1887 was	3. 4	1870 was	4
1886 was	3. 27	1869 was	4. 24
1885 was	4. 12	1868 was	4
1884 was	4	1867 was	4
1883 was	4. 05	1866 was	6. 21
1882 was	4. 44	1865 was	4. 96
1881 was	4. 42		

The amount of bullion held by the Reichsbank on the 31st of December, 1888, was 858,500,000 marks, against 766,800,000 marks on the 31st of December, 1887. This satisfactory position is due to the prudent management of the bank in continually drawing gold from abroad, especially from England, France, Holland, Russia, and latterly also in rather large quantities from the United States. The dividend of the Reichsbank for 1888 is estimated at 5.60 to 5.87 per cent., against—

	Per cent.		Per cent.
1887	6. 2	1881	6. 67
1886	5. 29	1880	6
1884	6. 25	1879	5
1883	6. 25	1878	6. 03
1882	7. 05		

From the above it will be seen that the estimated dividend for 1888 was lower than that of 1887, and the explanation of this is that the average value of money during that year was low. In connection with this subject it may be of interest to state how the Reichsbank disposes of its available profits every year. In the first place 4½ per cent. is paid to the holders of share certificates, and the remainder is distributed in the following manner: 20 per cent. is placed to the reserve fund; 40 per cent. is paid to the state, and 40 per cent. to the shareholders.

The total capital of all the Berlin banks amounted to 475,000,000 marks in 1888, against 126,810,000 marks in 1865; and the reserve fund was in 1888, 81,205,804 marks, against 15,171,153 marks in 1865. The income of the Prussian Budget for 1889-'90 is estimated at 1,513,894,879 marks, against 1,410,728,721 marks in 1888-1889, and the expenditures at 1,436,402,483 marks in 1889-'90, against 1,362,123,667 marks in 1888-'89. The extraordinary expenditure for 1889-'90 is put down at 77,492,396 marks against 48,605,254 marks in 1888-'89. The total debt of Prussia in 1889-'90 is given at 4,457,182,070 marks, against 4,425,104,506 marks in 1888-'89.

GERMAN AGRICULTURE.

While it is noted that in nearly every branch of industry in Germany there has been a general improvement, the agriculture of the country seems not to have shared in this prosperity, for the general complaint heard on all sides indicates that the condition of the farming element is by no means satisfactory. The law-makers of the country were not slow in listening to the appeals of the agriculturists, and a year ago the import duty on grain was raised with a view to protecting this interest against

the competition of low-priced foreign grain. There is still a great deal of opposition in Germany to this taxation laid upon breadstuffs, and there is much hot discussion on the subject whenever the question of the welfare of the farmers is debated in the Prussian Diet; the opponents claiming that it is the result of making bread dearer for the work people, while the supporters of the system maintain that the duty has not had such an effect, which they endeavor to prove by a comparison of the prices before and after the duty went into operation.

In a recent speech, made by the minister of agriculture in the Prussian Diet, he said that "up to the year 1887 the prices had been declining, consequently there is no question of breadstuffs having been made dearer, nor has such been the case since the increase of the duties in 1887. The prices during the years up to 1879, that is, when there were no duties, were much higher than in 1888 under the protective duties and a failure in crops. The average price for wheat up to 1879 was 221 marks, for rye 169 marks, while the prices at present are 184 marks and 156 marks respectively." From the above argument it would therefore appear that the farmers have not been benefited by the increase of the duty.

The debates at present in the Reichstag on the proposal of the Social-Democratic party to abolish the duties on grain are very interesting, and it may be of sufficient importance to give herewith translations of some extracts from a few speeches of the opponents and supporters of the measure.

BEHEL (Social-Democrat): During the last years I have made inquiries at 100 different places and received replies from 92. In these 92 places there were 11 in which the price of bread had risen 1 pfennige*, 21 in which the price had risen 1½ pfennige, 29 in which the price had risen 2 pfennige, 17 in which the price had risen 2½ pfennige, 11 in which the price had risen 3 pfennige, and 3 in which the price had risen 4 pfennige. The annual average additional cost, taking a rise in bread of 1 pfennige, amounted to 15.20 marks for 4 bread consumers, to 22.78 marks for 6 consumers, and to 31.32 marks for 7 consumers. Taking a rise in bread of 2 pfennige, the additional cost amounts to 33.10 marks for 4 bread consumers, to 46.60 marks for 6 consumers, and to 51.32 marks for 7 consumers; taking a rise in bread of 3 pfennige, the additional cost amounts to 36.76 marks, 55.35 marks, and 64.35 marks, respectively.

If the duty on grain had not existed prices could not have reached their present height in spite of a failure in the crop. It can be reckoned that in the case of many families the additional cost per annum owing to the duty amounts to 12 to 15 per cent. on a total income of 600 marks. This additional cost may be considered as a very heavy one. It has always been maintained that the wages had increased in consequence of the duties, but I have no knowledge thereof. The statistics of the "Unfallberufsgenossenschaften," on the contrary, show that last year the income of the laboring classes was 3 per cent. lower. It is a fault of the indirect duties that they are always borne by the consumer. Bread is the principal article of food of the family of the work people. We live in an age of social reform, and yet the most necessary article of food for the workingman is made dearer.

The laborers in the country are said to receive higher wages since the introduction of the duties on grain, but I require proof first of this, and should it be so, then it must be also shown that the rise in wages had been due to higher duties and not to any other causes. The wages paid to the country laborer, especially in the East Prussia provinces, are really starvation wages. That is the reason why annually swarms of workmen go from East Prussia, which alone furnishes 60 per cent. of the emigrants in search of work to the western provinces, especially to Saxony (the so-called Saxon wanderers). Even in the proximity of Berlin the wages of the country population are astonishingly low. The duty on grain therefore has certainly not contributed to the improvement of the condition of the country laborers. Even among the land-owners there is only a small minority that are better off by the grain duty than formerly.

Not less than the workmen have this class of land-owners also suffered by the grain duties. At least four-fifths of the entire German population are interested in these high-grain duties or has been in part severely injured by them, and this injury can not be made good by an increased consumption on the part of those who derive a benefit from the high-grain duties. It is therefore a duty of justice and humanity that the Reichstag should remove these duties. If you really intend seriously to practice social reform in the German Empire, you must devote yourselves to a reform of legislation on taxes and duties. You show yourselves here as warm defenders of the country, but you impose burdens on the same, especially on the poorer people. It would be the most crying contradiction if such a system is to be upheld any longer.

Von Kardorff (conservative party): "The prices of grain, in spite of the duties, are lower to-day than they were when there were no duties. Above all, it is necessary that the people find employment. I am convinced that what was said by the preceding speaker will have a contrary effect on the country population to what he ex-

* 100 pfennige equal to 1 mark.

pects. I have not risen to contradict the preceding speaker, but simply to argue the condition of our agriculture, of which even the best people have formed erroneous opinions. I will take, for instance, a large farm in order to illustrate the condition of things in general. Said farm yielded formerly a gross income of 60,000 marks, with expenses of management amounting to 40,000 marks. These expenses, as every farmer will admit, have not become less, but the receipts have fallen off 25 to 30 per cent. The gross income, therefore, amounts to now only from 42,000 to 45,000 marks. Here it must be remarked that the latter periods of calamity have rather increased a little the expenses of management.

"Besides, I am not making any allowance for farms encumbered with debt or for occasional accidents. From a Silesian farmer, I received the information that only the owners of woods and forests had been able to realize the same rents as formerly, but that other owners and land renters of his district have had heavier losses, and he could say the same of neighboring districts, than any one could have expected a few years ago. There are occurrences in which owners of farming land have been compelled to convert them into forests which had been under cultivation for the last one hundred and fifty years. With such a condition of things existing in any other branch of industry there would certainly be appeals made to the State. With no class of the population is the distress greater than it is with the agricultural.

"I sincerely regret that this class should be visited with a fate which they truly never deserved. The peasant, free of debt, has got over the distress best of all, inasmuch as there is scarcely a class in existence that is better able to endure privations than the peasants are. The educated class of land-owners has also accustomed itself to privations, but there is a limit to everything. Parents whose families for generations have been in the habit of giving their children a higher school education have now to hesitate before sending them to the common schools. The small holder fares also worse than formerly, and with respect to the agricultural laborers, their position is best illustrated by statistics which point to a continual movement of the population from the country to the towns and cities. The country becomes more and more depopulated, while all the towns and cities are being overcrowded.

"Mr. Bebel believes that the removal of the duties on grain would make the prices for bread cheaper. I, on the contrary, believe that it would lead to a further driving of the population to the towns and cities. The desertion from the country has a very serious meaning. In the discussion upon Sunday's rest it was shown that from year to year the percentage of those workmen in the manufacturing districts unfit for military service was increasing. This point of view comes also under consideration here. Only such people are strong who have lived from early youth in the country. In this respect Russia has the advantage that its country population is constantly increasing. In removing the duties on grain you would be decidedly aiding and abetting the antisemitic movement, and one must be really convinced that such a movement is at strict variance with the principles of tolerance, which, according to my conception, is the foundation of our modern life of society. The consequence thereof has been that many clever and conservative Jewish citizens have been forcibly driven into the camp of the progressive and social democratic party.

"This movement is gaining in importance from day to day. It is quite wrongly asserted that capital will derive benefit from the removal of the duties. Opposing interests between capital and production exist just as little as between employers and employes. The grain duties have had but a small effect and I fully concur with those who maintain that these duties have by no means yet improved the condition of agriculture. I do not mean to say that the duties on grain ought to be raised still higher. I wish only to remark that in time we shall arrive at other means to aid agriculture, but as long as we do not possess such other means, we must stick fast to the grain duties. According to my idea only those can vote for the removal of the grain duties who seek an interest to create distress and discontent among the laboring population and to give strength to the antisemitic movement."

Such, then, are the views of an opponent and a supporter of the new grain duties. The officially published figures show that the average prices of grain were higher in 1888 than in 1887, as will be seen from the following:

Kinds.	1887.	1888.
	<i>Tons.</i>	<i>Tons.</i>
Wheat.....	\$40.78	\$42.60
Rye	30.48	32.91
Barley.....	32.52	34.23
Oats.....	28.41	31.07
Maise	21.22	27.96

* Calculation made from the mark at the rate of .238 cents to the dollar.

Statement showing the prices of grain in the principal markets of Germany during each month of the year 1888 per 1,000 kilos (2,205 pounds).

The rise in the prices of rye and barley in 1888 began in April, with wheat and oats it was earlier. The maximum was reached in November, and in December a decline took place. This upward movement of the prices in the spring and a downward one in December did not only take place in the year 1888, but when the average prices of the whole period of the past ten years is taken, it is observed that the prices of wheat, rye, and oats began their upward movements in May and June, which, however, did not continue till November, but sunk considerably between this period. With barley the movement was different; its lowest stand of the average ten years was in July, and its highest in October.

PRICES OF GRAIN IN NEW YORK AND BOSTON.

It will be interesting to give here, as a comparison, the movement in the prices of wheat in New York and Berlin during the years 1887 and 1888:

Time.	New York red-winter No. 2, per bushel.	Berlin per ton.	Time.	New York red-winter No. 2, per bushel.	Berlin per ton.
		<i>Marks.</i>			<i>Marks.</i>
Average in 1887	\$0. 88. 37	164. 38	August	\$0. 96. 36	172. 17
January, 1888 90. 65	162. 12	September 99. 22	183. 54
February 89. 15	161. 05	October	1. 11. 37	187. 42
March 90. 18	161. 22	November	1. 08. 15	185. 27
April 92. 72	169. 87	December	1. 04. 36	176. 88
May 96. 82	174. 50	Average in 1888 96. 52	172. 24
June 89. 83	166. 78			
July 89. 91	168. 88			

The figures show that while the increase in New York from 1887 to 1888 was about 9 per cent., in Berlin it was only about 4 per cent. during the same periods.

CROP YIELD.

The estimated yield of the crop in the Kingdom of Prussia for the year 1888, taking 100 as an average, is as follows:

	Percent.		Percent.
Winter wheat	91	Buckwheat	87
Winter rye	72	Lupine	93
Summer barley	94	Potatoes	96
Oats	96	Winter rape	77
Peas	94	Hops	88
Beans	93	Clover	79
Vetch	91	Hay	82

According to the above estimates there is not a single instance in which an average crop is reached. Of the important agricultural products, oats is the only one that showed better results than in the preceding year. The yields of the crops in Prussia for the years 1887 and 1888 were as follows:

Crop.	1888.	1887.	Crop.	1888.	1887.
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Wheat	1, 209, 187	1, 485, 427	Buckwheat	94, 223	91, 047
Rye	3, 377, 148	4, 369, 007	Lupine	88, 901	100, 836
Barley	985, 340	1, 074, 105	Potatoes	12, 008, 792	16, 164, 891
Oats	2, 566, 927	2, 664, 376	Rape and rape seed	82, 899	98, 993
Peas	212, 413	267, 257	Hops	1, 794	1, 892
Beans	120, 480	138, 866	Clover	2, 316, 470	2, 864, 826
Vetch	68, 730	91, 065	Hay	5, 700, 332	6, 238, 569

By a glance at the above figures it will be readily seen that the estimated yield of the crops in the year 1888, in comparison with that of 1887, turned out very badly. The crop season of 1888 was a very cold and wet one, and hence these poor results. Taking the yields of wheat and rye in 1887 in tons at 1,485,427 and 4,369,007, respectively, the yields for the year 1888 show a falling off in tons of 276,290 and 991,859, respectively.

AREAS UNDER CULTIVATION.

The areas of the cereals and other products under cultivation in Prussia in 1887 were as follows:

	Hectares.*		Hectares.*
Winter wheat	1, 018, 051	Buckwheat	191, 502
Winter rye	4, 336, 391	Potatoes	1, 695, 118
Summer barley	911, 216	Winter rape	82, 840
Oats	2, 485, 966	Hops	4, 454
Peas	344, 208	Clover	1, 111, 708
Beans	102, 124	Hay	3, 294, 736

* Hectare=2½ acres.

Taking the yields of 1887, the average product in tons, per hectare, was as follows :

	Tons.		Tons.
Wheat	1.46	Potatoes	8.15
Rye	1.00	Oats	1.07
Barley	1.17	Hay	1.90

GERMANY'S GRAIN IMPORTS.

Russia and Austria-Hungary continue to monopolize Germany's import trade in breadstuffs. Out of a total of 330,830 tons of wheat imported into the Zollverein of Germany, Russia furnished 149,719 tons, Austria-Hungary 120,272 tons, and the United States only 2,181 tons. Of rye, out of a total of 648,562 tons, Russia furnished 467,061 tons, and Austria-Hungary 11,854 tons; of barley, out of a total of 440,030 tons, Russia furnished 118,185 tons, and Austria-Hungary 221,775 tons. The annexed table gives an exact statement of the imports and exports into and from the German Zollverein, according to countries, during the past five years:

Imports and exports of grain into and from the German Zollverein during the year 1887, by countries and the total for the four preceding years.

GERMANY'S SUGAR INDUSTRY.

In the hope that the sugar crisis of the campaign of 1885-'86 would soon come to an end and the area of beets planted in 1887 was not very much larger than that cultivated in the preceding year, which had been reduced as much as possible in order to avoid an overproduction. The condition of the industry in the campaign of 1886-'87 did not turn out as it had been hoped it would and so it was again thought necessary to reduce the production in the following campaign. In 1887 the manufacturers not only reduced their area, but also made smaller contracts with the farmers. The farmers, therefore, who raise beets for sale, that is those who are not manufacturers themselves, planted less because they were unable any longer to realize the profits which they had hoped for. The production of beets in the campaign 1884-'85 amounted in tons to 10,402,688; campaign 1885-'86 to 7,070,316; campaign 1886-'87 to 8,306,671, and campaign 1887-'88 to 6,963,960. The prices paid for beets in the last campaign ranged from 1.50 to 2.40 marks per 100 kilos.

The technical improvements in the campaign of 1887-'88 in beet sugar manufacture consisted in evaporation contrivances and filtering processes. The improvement in the first instance consisted in a greater saving in the use of waste steam, by making the evaporation space larger and the heating of the apparatus more than formerly with indirect steam, whereby a material saving in heating fuel is accomplished. In the purifying of the beet juice sulphurous acid has been brought more into use; also, the repeating treatment of the juice with lime and carbonic acid, with the use of the filtering presses, has proved satisfactory. A new separation process, with the addition of carbonate of magnesia, is reported to have worked with good results in the Rhineland.

In the campaign of 1887-'88, there were 167 factories that prepared sugar from molasses against 137 in the preceding campaign, of which 84 worked by the "Osmose" process. As long as the prices of sugar were low and the price of molasses proportionately so, this process went largely out of use on account of too small profits, but it has been recommenced in the last year by a large number of factories, because the

corresponding prices of sugar and molasses have been more favorable. In the campaign of 1886-'87, 55 factories worked with the "Osmose" process, 3 in 1885-'86, 79 in 1884-'85, 115 in 1883-'84, 124 in 1882-'83, and 135 in 1881-'82. In 1886-'87, 48 factories worked with the "Elution" process, 9 with the "Substitution," 3 with the "Precipitation," 20 with the "Separation," 3 with the "Strontium," and 1 with the "Manoury."

The following quantities of molasses were used for being converted into sugar by the above factories in the campaign of 1886-'87:

	Tons.
Osmose process	68,934
Elution and precipitation process	88,266
Substitution process	11,754
Separation process	89,889
Strontium process	6,341
All other processes	761
Total	215,955

The prices of sugar in the last campaign were more favorable in consequence of the prospect of a reduction in the production of beets, and of a smaller supply of sugar, on hand. In September and October there was a considerable sinking in the prices, but from that time they began to rise, when in January their highest points were reached. During the remaining period of the campaign, although the movement in the prices from February to May was downward, it took an upward course in June and July. The average prices of sugar in the principal markets of Germany per 100 kilograms during the last and preceding campaigns were as follows:

Campaign.	Refined sugar.			Raw sugar.		
	Brunswick.	Cologne.	Magdeburg.	Brunswick.	Cologne.	Magdeburg.
	Marks.	Marks.	Marks.	Marks.	Marks.	Marks.
1887-'88	58.76	59.43	57.70	46.83	48.67	46.39
1886-'87	58.86	54.43	52.64	41.27	43.53	41.89

The annexed table of the production of beet sugar in Germany during the past seventeen years shows what wonderful progress there has been made in this one industry in Germany. The number of factories in operation rose from 311 in 1871-'72 to 391 in 1887-'88, and the quantity of beets worked during the same period rose from 2,250,000 to near 7,000,000 tons. The largest quantity of beets worked during said period was in 1884-'85, which amounted to 10,500,000 tons. (See Table A.)

The exports of raw beet sugar from the German Zollverein rose from 5,666 tons in 1871-'72 to 553,793 tons in 1884-'85, which fell off to 344,710 tons in 1887-'88. The export bounties amounted in 1871-'72 to about \$922,468, and in 1887-'88 to a little over \$2,700,000. The total gross receipts of the taxes on sugar in 1871-'72, including the import duties, were \$11,546,044, and in 1887-'88, \$26,040,844. The net income, therefore, to the Government, that is, after deducting the bounty, was only a little above \$1,000,000 in 1887-'88, against \$10,625,000 in 1871-'72. The highest net income received by the Government during the seventeen years was in 1882-'83, when it amounted to about \$16,000,000.

Revenues from taxes on sugar beet collected in the Zollverein of Germany.

WOOL.

The last year's market in wool experienced no fluctuations of importance, but has been steady and fairly maintained. Although there has been an increase in the production of wool, the stocks have at no time accumulated to such an extent as to interfere in any way with the sale of the raw material, so that even at the close of the year the supplies on hand are small. The spinneries are furnished with orders for many months to come, and if no adverse influences show themselves no change in the present steady and satisfactory state of business is anticipated.

The total imports of wool into Germany were as follows:

Kind.	1886.	1887.	1888.	1885.
Imports:	<i>Owt.</i>	<i>Owt.</i>	<i>Owt.</i>	<i>Owt.</i>
Raw wools.....	2,632,000	2,217,000	2,174,000	1,976,000
Shoddy.....	190,000	120,000	156,000	196,000
Exports:				
Raw wool.....	257,000	199,000	261,000	202,000
Shoddy.....	290,000	288,000	264,000	278,000
Home production.....	490,000	490,000	490,000	490,000
Home consumption.....	2,774,000	2,340,000	2,295,000	2,157,000

The prices per kilogram of the chief descriptions of wool were as follows:

Kind.	1886.	1887.	1888.	1885.
Cape:	<i>Marks.</i>	<i>Marks.</i>	<i>Marks.</i>	<i>Marks.</i>
Extra super snow white.....	3.30	3.30	3.70	3.20

EMIGRATION FROM GERMANY IN 1888.

During the year 1888 transatlantic emigration amounted to 93,515 persons. In comparison with former years the figures were as follows:

1887.....	99,712	1882.....	193,869
1896.....	79,875	1881.....	210,547
1885.....	107,238	1880.....	109,190
1884.....	142,586	1879.....	23,327
1883.....	166,119	1878.....	24,217

The following table shows the different provinces from whence the emigrants went and the number of the same in the year 1888:

East Prussia.....	2,112	Oldenburg.....	1,038
West Prussia.....	12,614	Brunswick.....	322
Braudenburg.....	4,651	Saxe-Meiningen.....	212
Pomerania.....	7,245	Saxe-Altenburg.....	60
Posen.....	12,434	Saxe-Coburg-Gotha.....	284
Silesia.....	2,367	Anhalt.....	101
Saxony.....	1,518	Schwarsburg-Sonderhausen.....	51
Schleswig-Holstein.....	4,433	Schwarsburg-Rudolstadt.....	98
Hanover.....	6,157	Waldeck.....	91
Westphalia.....	2,001	Reuss, elder branch.....	41
Hesse-Nassau.....	3,204	Reuss, younger branch.....	114
Rhineland.....	4,297	Schaumburg-Lippe.....	122
Hohenzollern.....	70	Lippe.....	80
Bavaria.....	12,248	Lübeck.....	1,066
Saxony (kingdom).....	2,297	Bremen.....	1,822
Württemberg.....	6,444	Hamburg.....	937
Raden.....	3,860	Elsass-Lothringen.....	169
Hesse.....	2,220	Uncertain.....	
Mecklenburg-Schwerin.....	1,145		
Saxe-Weimar.....	368		
Mecklenburg-Strelitz.....	241		
			93,515

It will be seen from the above figures that the largest contingent of emigrants is furnished by West Prussia, Posen, Bavaria, and Württemberg, and which are chiefly agricultural districts.

AID TO THE POOR IN GERMANY.

With regard to the care of the poor in Germany, some statistics have recently been collected and published by the Government which give some interesting information on this subject. The statistics refer to the year 1885, and it appears that the German Empire had in that year 1,592,386 persons obtaining relief, equal to 3.4 per cent. of the population. The total cost of the relief of the poor in Germany amounted in that year to 92,452,517 marks, equal to 1.97 marks per head of the population, or 58.09 marks for each person assisted.

It is generally supposed that the poorer districts in Germany furnish the largest number of poor seeking relief, but such is not the case, as just in those districts, which are better off, comparatively more persons are relieved than in poorer districts. For instance, at the North Sea the fertile marshy districts of the Weser and the Elbe show a higher poor relief than the adjoining heath-lands in West and East Prussia; then again in the fertile lowlands of the Vistula and Memel the poor relief is greater than in the so-called rugged localities (*rauhe Gegenden*) of Pomerania. In Württemberg, in the wild regions of the Bodensee, a larger number of poor are relieved than on the unfertile plains of the Alp region. The aid given to the poor is much larger in the cities and towns than in the country, and which is explained by the fact that the organizations for such purpose in the former places are more perfect and the opportunities and means for assistance greater.

WAGES.

The statistics of the wages of workmen, compiled by the "Berufsgenossenschaften" (trade associations), show that the wages in 1886 of 3,473,435 workmen amounted to 2,148,000,000 marks, or an average of 618 marks per head, and in 1887 of 3,861,560 workmen to 2,389,000,000 marks, or an average of 620 marks per head. It is, however, asserted that through miscalculation the number of workmen in 1887 is put down at about 200,000 persons too high, in which case the average wages per head for the year would be 640 marks.

WM. D. WAMER, .

DANTZIC.

REPORT BY CONSULAR AGENT COLLAS FOR THE YEAR 1887.

The year 1887 must be reckoned as one of the most unprofitable for the trade of Dantzic, for not only the majority of but also the most extensive branches of commercial and industrial activity were worse than the unfavorable year 1886.

Although a marked change for the better took place in October, in consequence of the abundant harvest, it could not make up for the disadvantages of the first three quarters of the year.

The arrivals of vessels numbered 1,813 and the departures 1,831. Of the former, there were 551 and of the latter 152 in ballast.

During the nine first months wheat shipments were very inconsiderable, and it was only after the new crop, which was large and of good quality, that activity took

BARMEN.

REPORT BY CONSUL FALKENBACH FOR 1888.

GENERAL ASPECTS.

The phases of the business year 1888 have been very similar in general to those of the several preceding years. Well-grounded hopes of the revival of trade and commerce have been repeatedly raised, to be dispelled again by the ever-varying complexion of the political situation, almost as soon as they come into existence. The market, therefore, for nearly every kind of manufacture, both for home consumption and for export, has been languishing. It may be said, as a rule, that factories have been kept in operation mainly at a sacrifice, and chiefly for the purpose of giving employment to skilled workmen and retaining business connections of long years' standing, which are formed by patient endeavor and which are difficult to renew when once severed.

In many instances during the year manufacturers were compelled to rid themselves of surplus stock by selling at prices below the cost of production, thus depressing the markets at home and abroad to a point where reasonable profits were no longer obtainable, and forcing buyers to limit the cost of each order. Still, in spite of the general depression, the past year has witnessed, without doubt, a nearer approximation of the rational relations between supply and demand than has existed for years past. Production at the factories has been restricted, and stocks at the trade centers have been reduced; so there is really good reason at present to believe that the culmination point of the general lack of prosperity has been passed, and that better times are approaching. Some manufacturers, to whom the improvement in business in the United States has brought orders, feel hopeful and are picking up courage for the future.

BRAIDS, BINDINGS, AND TRIMMINGS.

The depression which prevailed in this branch of trade during the preceding year still continues, and slight as were the hopes of an improvement in the course of business, they were doomed to disappointment. A review of last year's business discovers ample cause for fearing that one of the chief industries of this district, in staple articles at least, is entering on a slow but sure decay, unless by means of commercial treaties more favorable than those now existing, Germany soon succeeds in reopening a portion of these foreign markets which a system of prohibitive duties has closed to her for the last decade. The efforts of many of the neighboring countries, as well as the United States, to protect and further their own industries by high protective duties have been generally successful, and foreign competition is already so strong that if present conditions continue much longer, German wares will be wholly excluded from those markets.

The manufacturers of the Wupperthal have made the unpleasant discovery that the competition springing up in Austria, Russia, France, Italy, Spain, England, and America is robbing them of one market after the other; therefore their ingenuity is continually taxed for something new in the line of trimmings, especially for ladies' clothing, in which article a period of business has commenced, giving the greatest confidence on all sides, the most popular style in which both material and color have a "dead" appearance. Even beads are not employed except for cheap articles. As regards fashion Barmen is now going hand-in-hand with Annaberg. As in the latter place soutaches and cords are once more being utilized, so in Barmen a great number of patterns, more particularly in cords, have been designed and perfectly charming trimmings produced from them. Colored trimmings play an exceptionally important rôle.

As opposed to soutaches, cords can be manufactured in all kinds of plaitings, and when combined with attractive stuffs, such as mohair, silk, etc., can be employed for producing the most various effects. So far as variety in design is concerned, the new patterns are surprisingly good.

In the manufacture of these trimmings, a so-called "crochet machine" has been competing seriously for some time with the hand and power looms. How very little banner manufacturers are now dependent upon the Parisian fashion has been proved in the season just passed. After the Wupperthal manufacturers had produced almost exclusively "dead" patterns, Paris brought out and demanded once more articles with metal effects. This, however, could not induce the banner manufacturers to renounce the path they had already struck out for themselves. They continued calmly to design and manufacture "dead" patterns, and the orders which have come in, particularly from abroad, show how accurately they had calculated.

Cords and soutaches are at present the articles most in demand, the inland and above all the Saxon manufacturers consuming very large quantities of them. The consumption of smooth woollen lace maintains its usual standard, the business done in this article being quiet although extensive.

Periods of great pressure as occurred in former years are no longer known. Torchon laces, an article of the greatest importance for the Wupperthal, are now more depressed than any other, both as regards prices and the wages paid to the work-people, so that neither manufacturer nor operative derives much profit from this branch. Tailor's tresses are probably the finest and comparatively speaking the most remunerative article of the entire stuff industry of the Wupperthal. Its marks dominate, as before, the markets of the world, and in this respect all the productive activity of other countries has not succeeded in altering much. The so-called "silk galloon" plays a very important part as a trimming for men's attire. The town of Ronsdorf takes the lead in this article. A slight reaction, however, is beginning to display itself in this branch, preference being shown for superior, more especially half silk tresses, called "cashmere laces." All silk tresses in which St. Chamond dominated the markets until within a short time ago are beginning to be produced here of a quality quite equal to that of the French goods.

For white and colored trimmings on a white ground the demand is becoming somewhat stronger, while on the other hand, woollen lace is only being sold in small lots and of superior qualities. Towards autumn there was much inquiry for the so-called "president's braid," increasing as the time wore on, so that a great deal of new machinery had to be set up. A fair trade was done during the first part of the year in linen and cotton ribbons, but it has since steadily decreased, probably owing to the bad crops, as this article has its chief buyers among the peasantry. During the early part of the year manufacturers were well occupied with woollen lace and galloons, and later on looms were busy and at good wages for galloons worked with gold thread destined for finishing ladies' wear. A fair amount of business was done in cigar tapes all the year around. On the other hand, there was little doing and at unsatisfactory prices in silk and silk-mixed piece goods. The trade in ribbons for gentlemen's hats was such as to give rise to many complaints, arising chiefly from an excessive offer and from the steadily declining prices of raw silk, which exercised a bad influence upon silk industry in general. To make matters worse, surrogates were largely employed for straw hats in the shape of cuttings from piece goods, both dyed in the pieces and calendered. It was only towards the close of the year that a rise in the price of the raw silk brought about a favorable change.

As regards the wire thread industry the unsatisfactory state of business referred to in my last year's report continued throughout the whole period under review. During the beginning of the year the sales of this article were still on a large scale, though at unsatisfactory prices, but as time wore on the demand slackened more and more, causing stoppage of work in some places, short time in others.

Wire thread shoe-strings were an exception to the rule, being much in demand, without, however, making up for the deficiency in other articles. It is most difficult to assign reasons for the diminished sale.

Fringes for tapestry, furniture, and decoration were in good demand, as in the year previous. On the other hand the situation of woven India-rubber articles is becoming more and more difficult. Owing to the increased consumption, the low prices accepted by manufacturers, it was possible to keep the factories in full swing. Unfortunately the home market has to bear the full brunt of foreign competition, while the greater part of the foreign market is closed to the manufacturers here, who, to make matters worse, are obliged to pay high import duties on the raw material. France and Austria in particular are levying high duties on the German produce, and it is incumbent upon the Government to try and mend matters by negotiating new treaties.

A fair business has been doing in lace fringes for girths and upholstering carriages; prices, however, are still far from being satisfactory. A slight steady improvement has taken place in the manufacture of button cloth. Dyers and finishers of piece goods were not fully occupied, and speak disparagingly of the year's results. Dyers of cotton were fairly well employed.

Compared with last year, business in cloth buttons for gentlemen's wear can not be said to have been favorable. Whilst manufacturers were fairly well employed up to August, they had to reduce work by one-fourth, and later on even by one-half. This state of affairs is chiefly due to a great many of these so-called "staple articles" being manufactured in prisons. Cloth buttons for ladies' apparel were neglected on account of not being favored by fashion. As regards brass buttons, the very unfavorable state of affairs that has prevailed for years past has continued even to a greater extent than formerly, yielding the most unsatisfactory results.

Altogether the trade in buttons offers no pleasing picture. Different causes have contributed to bring about this result. In the first place the industry of the Wupperthal is at the mercy of the Bohemian competition with regard to patterns. Let alone

the great advantage enjoyed by Bohemia owing to lower wages, the manufacturers in this place have to put up with a very uneven treatment at the hands of the Austrian custom-house officers. Since the middle of October matters have somewhat improved and everything points to a brighter future.

Dyers of Turkish red yarn complain of slack trade and depressed prices. Particularly the demand for India has decreased. The factories producing Fanella and half-woolen cloth for coats were fully occupied during the first part of the year, whilst during the latter part the demand slackened and full time could only be maintained through concessions on the price and working on stock.

CARPETS, ANILINE COLORS, ETC.

The carpet factories have been fully occupied at satisfactory prices, and the export trade has still further developed itself. During the early part of the year business improved, though slightly, in aniline colors. The demand increasing steadily, the manufacturers were able to make a profit, although the margin remained very small. Later on the demand fell away and prices dropped, so that it is only as regards the volume of the business satisfaction can be felt.

Soap manufacturers have cause for serious complaints. Owing to a reckless competition this branch of industry finds itself in a very bad state indeed.

Glycerine manufacturers work on a reduced scale since dynamite works do their own refining.

As regards the manufacture of eyelets the past year has been a disastrous one, owing particularly to the excessive rise in the price of copper, which has been caused by the syndicate in Paris. The manufacture of gold and silver plated copper and figured tombac and brass-sheets was influenced by the unfavorable state of the brass-button industry, but generally speaking business was on a normal scale.

Business in colored paper has been unsatisfactory and the complaint about declining prices and slackened demand was general. On the other hand a new branch in the same line, viz, chromo-paper and chromo-cardboard has given satisfactory results.

IRON AND STEEL WARES.

Business in iron and steel wares has much improved, thanks to the conventions entered into. Prices which had at the end of last year sunk to a very low level have risen considerably, maintaining the advance. All branches were fully occupied and manufacturers of small iron ware were especially busy.

MACHINE FACTORIES

Were more employed than last year, particularly towards the close of the year. Unfortunately exports are diminishing and are not likely to increase until the duties are abolished both on raw material and manufactures.

Boiler-makers were well employed during the first part of the year, whilst work was partially wanting during the latter half.

Braiding machine-makers complained of a decreasing trade. This specialty, which, during the years 1885 to 1887, thanks to its connection with the lock trade, gave work to nearly one-half of the engineers of this district, had already in 1887 suffered a reaction in consequence of the sudden enlargement of workshops and on account of overproduction. A great number of hands were consequently thrown out of employment, and to-day there are not more than one-half of the men working, compared with 1887.

ENVELOPES, ORGANS, ETC.

Trade in envelopes was satisfactory during last year. All hands engaged in this industry well occupied.

Organ-builders complain of a dull season. It was only towards the close of the year that a slight improvement took place, and that more hands could be put to work.

Pianoforte-makers were only fairly well occupied. Complaints are made of increased import duties in many countries.

In general it is worthy of remark that during last year the relations between employers and employes were undisturbed. Wages have remained on a normal scale and no strikes of any consequence took place. Reverting to commercial transactions I have to report as follows:

Indigo was dull and prices declining. The sale of cotton was slack at the beginning of the year, improving as the time went on and the volume of business was on the whole satisfactory, although dealers were often in no enviable situation, taking

into account the very sharp competition. The sale of English woolen yarn in the Wupperthal was slack all the year round, and prices were continually on the decline.

Business in raw silk was very unsatisfactory in 1888. Notwithstanding an increased demand and consumption prices were unable to hold their own. Even the bad crops in China and Japan had no effect and prices kept falling until, in December, they reached the lowest point during this century. In December a syndicate of a speculative character caused a rapid rise to the detriment of dealers and manufacturers alike, who as a rule had very little stock on hand.

COAL, BANKING, EXPORTS.

The coal trade has at last to report a very satisfactory result. Not only has consumption increased, but prices of all kinds of coal have materially increased.

As regards banking, I have to report a very easy money market, and in the beginning of the year the rate of discount in the open market sank as low as $1\frac{1}{2}$ per cent., whilst the Imperial Bank remained at 2 per cent. It was only in the autumn that rates stiffened, owing to the greater demand on the part of the trade usual at this season of the year and to an increased activity at the stock exchange, as well as to the demand for loans. At the close of the year the official rate had risen to $4\frac{1}{2}$ per cent.

The declared value of exports from this consular district to the United States during the year ending December 31, 1888, was \$4,302,716.69, against \$5,772,623.71 in 1887, a decrease of \$1,469,907.02, compared with the previous year.

The following table shows the total exports from this consular district to the United States during the year ending December 31, 1888.

JOSEPH FALKENBACH,
Consul.

UNITED STATES CONSULATE,
Barmen, March 31, 1889.

MANNHEIM.

REPORT BY CONSUL MONAGHAN.

INTRODUCTION.

The year 1888, from a business stand-point, in this consular district, in the whole German Empire, presents a much more pleasing retrospect than any of its immediate predecessors—1885, 1886, and 1887.

Commerce and manufactures have, on the whole, been very satisfactory. It was deeply regretted, however, by Germans more than once that not only in Germany, but in countries from which the Germans purchase breadstuffs, bad harvests in grains prevailed, bad both as to quality and quantity. Mannheim's grain trade for 1888 ran just a little behind that of 1887 by 2,447,000 double centners against the previous year's 2,528,000. This dropping off finds a rational explanation in the fact that increased quantities had been bought and stored when it became apparent that the import duties on cereals were to be increased. The year, for the grain trade, all things considered, may be ranked as a very favorable one. The grain trade is the most important branch of Mannheim's commerce.

FLOUR AND MEALS.

The millers ground out large profits from the upward tending prices which prevailed during the second half of the year. The quality of flour offered by Mannheim and neighboring millers was good enough to succeed in driving north German products from Baden exchanges. Traders in flours and meals did a little of the usual growling about overproduction.

HOPS.

The hop crop for 1888 was smaller, compared with extent of territory under cultivation, than for any one of the last five years. The quality was by no means what was desired or expected. The upward movement in prices, especially for stock held over from 1887, gave satisfactory returns. A conjunction of unavoidable causes resulted in the seed-crop of 1888 being almost worthless.

BRANDIES AND DISTILLED LIQUORS.

Business in brandies and distilled liquors suffered much from the new laws affecting their production and sale, and from the enormous supplies on hand "laid in" to anticipate new legislation.

YEASTS, MALTS, ETC.

Business in the production of yeasts, malts, etc., in spite of a cool summer and consequent small consumption of beer, was favorable. The business in beer was equally, if not more, satisfactory. Trade in wine was lively throughout the year; the 1887 crop finding favor.

Trade in sugar was affected by those uncertain movements and trade currents which always affect staple articles when subjected to new legal enactments; besides, prices began to drop and remained uncertain until the new consumption tax went into operation and more certain conditions began to prevail. Business in coffee was livelier than in 1887, but the profits hardly made up for the increased labor and anxiety. Trade in native tobaccos was slow, heavy, and dragging. Local cigar-makers realized profits; although foreign tobaccos, used in cigar-making, were very dear. The Portland cement companies realized large profits, consequent upon the increased demand for new buildings and the active movement in erecting new edifices of all kinds, especially dwelling-houses and fortifications.

COAL, GROCERIES, CHEMICALS, ETC.

Coal, thanks to the favorable condition of the rivers, for a large part of the year, enjoyed good profits; and looks out upon the new year with hopes of realizing larger ones. The iron and metal trade was also very lively and very profitable. All machine-shops ran on full time, with a full or added to complement of men. Business in groceries was very active, especially during the first few months, and returned fair profits. Technical and pharmaceutical instruments and productions enjoyed increased prices and no diminution in sales. Spices gave profits. The wholesale chemical trade had a good year and has bright prospects for 1889. Trade in aniline colors equaled expectations. Petroleum held its own, the American still leading all competitors. It is hoped that some method of water transportation for American oil cheaper than the present may be devised to enable our oils to maintain their supremacy over Russian oils. The latter, with tank ships and tank trains, are doing every-

thing to get ahead. Should they once do so, American petroleum is doomed in these markets. The production of plant oils for cooking purposes, a very important branch of this districts trade, was very satisfactory. Paints, oils, and varnishes sold at satisfactory prices.

TEXTILES, MANUFACTURES, ETC.

Trade in textiles, of all kinds, answered the expectations of all those engaged in their production. Carpets sold well but at small profits. Manufacturers of leather look back upon a prosperous year. Commission houses and those engaged in the immediate marketing of leather goods came out with small profits. The shoe trade was somewhat better than in 1887. Trade in wood, for building purposes, was not good, the export to Holland falling off slowly but surely. Saw and planing mills had a good year, with slightly advanced prices, due, of course, to the active movement in building. Wood-pulp manufactures are still extending and give promise of profits. Cork manufacturers were affected by the cold weather and its influence on bottled beer and mineral-water consumption. There was an increased demand for wood types and for combs made from tortoise shells. The manufacture of rubber goods, of which, by the way, the largest concern is in the hands of Americans, was not unfavorably affected. Companies engaged in the express and transportation business report largely increased profits and business over 1887. Commission houses report large profits in everything except grain. Insurance business remained almost stationary.

MONEY MARKET.

The money market during the entire year showed a constant and abundant supply. Business in stocks and securities developed in an extraordinary manner, so much so that it bordered always on the safety line, and one time got a slight shock that sent it back into safer and quieter currents.

BRIDGES, RAILROADS, ETC.

The year saw a new bridge projected over the Neckar, new railroads opened, a new and magnificent branch post office building put up and opened near the depot; new water-works put into successful operation, a new bourse opened, a hundred or more large dwelling-houses erected, projected, or enlarged; a new school-house, covering an entire square, built for primary and intermediate purposes. The spirit that turned this city, once a court city, into a mart of trade and center of commerce still prevails. That spirit has made Mannheim in many ways the third city of the Empire, coming after Berlin and Hamburg. The business men's clubs hold, as usual, courses of lectures and evening schools for instruction in languages, business methods, etc.

GRAIN.

Wheat.—As usual, grain gets the first place in a report from this city, for here the grain trade is by far the most important. During the first half of 1888 business in wheat went along quietly. In view of the increased duties projected in 1887 the mills and merchants had laid in extra supplies. Besides, large quantities of 1887's favorable harvest were already on hand. These supplies affected the market unfavorably for a time. The reports of a bad harvest caused prices to run up during the fall to prices and impulses hitherto unknown on Mannheim's corn exchanges. The amount of trade Mannheim once had with Switzerland was cut down this year almost to zero, Hungary, with its rich harvests, getting a lion's share, and not only of the Swiss, but of the Bavarian, Wurtemberg, and South Baden trade, leaving Mannheim to fill demands in her immediate neighborhood. In 1887 Mannheim docked 2,012,260 meter centners of wheat sent to her by water, while in 1888 she docked only 1,508,623 meter centners; a loss of 25 per cent. Her trade with Switzerland is indicated for 5 years by the following figures:

	Double centners.
1884.....	679, 288
1885.....	408, 550
1886.....	309, 554
1887.....	418, 908
1888.....	144, 769

The influence of the new grain-tax, says Dr. Landgraf, "can easily be seen; the interior must pay it. The tax came in a bad time, a year in which countries compelled generally to buy abroad to piece out their year's supply were compelled to buy more than usual. How Germany was affected may be seen from the fact that Holland got its wheat last year (1888) for 15 to 50 marks per double centner, while Mannheim had to pay 21 to 50 marks and Lorrach, further inland, 22 to 75, and for rye 17 marks, while in Switzerland, at Basel, a hundred miles beyond where the Rhine is navigable, and most of whose wheat and grains came from Hungary, wheat sold at 22.50, francs, or 18 marks, and rye at 15 francs, or 12 marks.

Sea freights (per 1,000 kilograms, in marks) to Rotterdam and Antwerp.

In the spring of 1888 the prices on freight from Rotterdam to Mannheim for wheat fluctuated between 9 and 12 marks; in summer and fall, between 8½ and 10 marks per load of 2,000 kilograms. Below is a table showing the movement in wheat prices on Mannheim's market during the last twelve years:

	1877.	1883.	1884.	1885.	1886.	1887.	1888.	Average for 1877-'88.

America produced in 1887 456,000,000 bushels against 485,000,000 in 1886, the quality middling, and she exported only 120,000,000 bushels against 154,000,000 the year before. Hungary's surplus last year was only 3,500,000 hectoliters against 9,500,000 the year before. Austria's harvest of 1888 runs behind the harvest of 1887 by the figures 1,000,000 hectoliters against 1,250,000 surplus in 1887. South Russia has a large surplus of 35,000,000 hectoliters. The ships and railroads not only of Russia but of Germany are constantly employed bringing this surplus into German markets. The quality of this Russian grain is far from good. Roumania had a middling crop, and can sell only 6,000,000 to 8,000,000 hectoliters. Servia's crop reaches 120 per cent. of an average one, so that she can give strangers 700,000 meter centners. British India can send away 14 to 16 millions of bushels. Prussia had in 1888, 80 to 90 per cent. of an average crop against 105 per cent. of an average in 1887. Baden and the Palatinate, two South German provinces, suffered terribly from bad weather, and came out with 75 per cent. of an average crop. Wurtemberg's and Switzerland's crop ran far behind an average one.

Consequent upon the increased import duties prices of grains advanced. In the early part of 1888 North German grain held control of Mannheim's market, and kept it until South Russian grain competed. As soon as harvest returns began to show small quantities of inferior grains, prices moved upward and remained so till the year closed. Mannheim drew most of its grain from North Germany and Russia, small quantities from La Plata, North America, and India.

Prices in marks per 1,000 kilograms:

January	196.20	July	197.48
February	193.60	August	210.00
March	196.50	September	217.89
April	195.90	October	222.80
May	200.30	November	223.90
June	198.80	December	220.10

Average for the following years:

1888	206.22	1888	216.32
1887	190.18	1882	227.48
1886	189.80	1881	240.83
1885	187.88	1880	247.36
1884	185.07	1879	220.52

Rye.—Russia's rye harvest for 1888 was good; Roumania's an average; France's hardly reached an average, while South Germany harvested scarcely half an average crop. Rye passed through the same changes in regard to prices as wheat. Mannheim bought rye in North Germany, Mecklenburg, and South Russia. There came to this port up to the 15th of December by water 499,610 double centners of rye against 310,605 double centners for 1887.

Prices in marks per 1,000 kilograms:

January	144.70	July	144.60
February	143.10	August	153.30
March	140.70	September	162.00
April	143.10	October	165.00
May	146.50	November	163.30
June	145.70	December	164.10

Average for the following years:

1888	151.84	1883	154.80
1887	142.57	1882	160.90
1886	148.04	1881	143.40
1885	160.76	1880	202.78
1884	160.44	1879	156.15

Barley.—The year's harvest in barley was bad and Hungary's crop was not good. It is better suited for brewing purposes than anything else. Bavaria and the Baden Palatinate had an average crop of good, bad, and indifferent. Bohemia and Mahrenland had good crops. Hungarian barley sold well and at good prices. A great deal of Hungarian barley went to Holland and England; the year's trade was good. The end of the year saw large supplies on hand. The amount brought by water in 1887 surpassed that of 1886, while the amount brought weekly in 1888 was to that of 1887 as 165,000 double centners to 72,000 double centners.

Prices in marks per 1,000 kilograms:

January	159.80	July	168.70
February	163.50	August	160.30
March	166.20	September	162.50
April	168.20	October	161.80
May	170.70	November	160.80
June	170.70	December	156.90

Average for the following years:

1888	164.13	1883	152.52
1887	155.97	1882	184.52
1886	151.89	1881	194.28
1885	173.83	1880	191.97
1884	166.58	1879	177.58

Oats.—Baden and its near neighbor, Wurtemberg, had a rich crop of oats, Russia and Bessarabia a weak harvest, Podolia a good one, and middle Russia an average.

The first half year's business in oats was very lively. The bad harvest of 1887 compelled Baden, Wurtemberg, in fact all South Germany and Switzerland, to buy oats in Russia. The good crop of 1888 shut out Russian oats from Germany, though in spite of every effort they still sold in the Swiss market at decent prices. There came 273,000 double centners by boat during 1888 against 134,000 double centners for 1887 to Mannheim's docks.

Prices in marks per 1,000 kilograms:

January.....	137.50	July.....	142.50
February.....	141.00	August.....	146.50
March.....	142.00	September.....	146.80
April.....	141.80	October.....	144.90
May.....	142.30	November.....	140.00
June.....	142.00	December.....	141.00

Average for the following years:

1888.....	142.36	1883.....	134.25
1887.....	121.91	1882.....	153.78
1886.....	135.12	1881.....	157.87
1885.....	150.14	1880.....	151.00
1884.....	149.96	1879.....	143.94

Maize.—The trade in maize from January to July was weak—extremely so. After July a slight change took place. The supply came from North America, La Plata, South Russia, and lands lying along the Danube River. The second half of the year's supply came almost exclusively from North America.

Prices in marks per 1,000 kilograms:

January.....	140.00	July.....	135.00
February.....	142.50	August.....	137.50
March.....	137.50	September.....	142.50
April.....	137.50	October.....	140.00
May.....	145.00	November.....	142.50
June.....	137.50	December.....	137.50

Average for the following years:

1888.....	139.53	1883.....	160.75
1887.....	121.30	1882.....	181.30
1886.....	119.37	1881.....	212.08
1885.....	122.50	1880.....	202.73
1884.....	136.56	1879.....	164.15

LEGUMINOUS FRUITS.

Business of all kinds in these goods was lively; so was the trade in dried fruits of all kinds. It is a mystery to me that American dried fruits, because of their superior quality, do not find larger sales in this country. There are families in this city who acknowledge the superiority of American fruits by importing directly large quantities of both kinds, fresh and dried.

HOPS.

The first half of 1888 ran along quietly, and would doubtless have been followed in the same way by the second half had not bad weather precluded the possibility of a very good crop on the continent. As soon as it became known that the outlook for 1888 was bad the supply of 1887 was much in demand at rapidly rising prices, until the '87 stock sold in October, of 1888, at from 90 marks to 110 per 50 kilograms. The fears of a bad crop in quality and quantity were fully realized. Germany's and Austria's products, in fact all the hops produced on the European continent, were sickly, black, and spotted stuff, almost useless, a great part of it. England got poor quality and only an average crop. In America the crop was good enough to cover home demand and leave some for export. Even while hops were being picked large prices were being paid. Even before they were thoroughly dried buyers were paying 190 to 200 marks per 50 kilograms. England's passive purchasing and America's good crop had their effects; prices grew steady, and then declined, so that October and November saw No. 1's going at 150 to 160 and 180 marks per 50 kilograms, middlings at 120 to 140, and poorer grades at 60 to 70. Prepared hops sold at: No. 1's, 220 to 240 marks per 50 kilograms; middlings, 180 to 200. At these prices all the good hops were bought up before the middle of November.

The following table gives in centners the hop-crop estimates for the 1888 harvest:

Bavaria.....	215,000	Total world crop of—	
Wurtemberg.....	65,000	1887.....	1,592,000
Baden.....	44,000	1886.....	1,674,000
Alsace and Lorraine.....	58,000	1885.....	1,820,500
Prussia.....	39,500	1884.....	1,657,000
		1883.....	1,572,000
All Germany.....	421,500	1882.....	817,000
Austria-Hungary.....	130,000	1881.....	1,365,000

INDIAN WHEAT.

The East India wheat trade last year saw 28,000,000 acres of land given up to wheat-fields in India. They yielded 7,000,000 tons of grain.

India exported as follows: In 1887-'88, 676,908; 1886-'87, 1,113,167; 1885-'86, 1,053,025; 1884-'85, 792,714; 1883-'84, 1,047,824; 1882-'83, 707,202 tons.

These exports were made to the following countries:

Countries.	1887-'88.	1886-'87.	1885-'86.	1884-'85.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>

Statistics come to Europe showing that there was lack of food in parts of India last fall, not felt so much as in the previous years, but still there. The amount thus taken made up 25,000 tons more than during the previous year. This caused an upward movement in prices. In two large provinces every effort is being made to extend the cultivation of wheat. The effort is twofold, working first to make reclaimed lands wheat fields, and to turn land long tilled for other purposes into grain lands. In the central provinces the hope is cherished to produce large quantities as cheaply as linseed and cotton. In the cultivation of wheat India sees a guaranty against periodic famines. Her surplus in happy years will bring gold and goods from western buyers, while in years of need her own fields and well-filled barns will feed her children.

RUSSIAN GRAIN.

Russia, recognizing the fact that grain must sell, is holding back, or has been, under advice of economic writers, tons of her grain for higher prices. Those wise enough to heed the advice given have realized large profits. Grain rose from 58 to 70 copecks per pood under an artificially produced scarcity. The following table is intended to show prices as they prevailed in three of Germany's leading markets, viz, Königsberg, in the far north; Berlin and Manuheim, in the south.

Prices in marks per 1,000 kilograms:

Kind and month.	Königsberg.	Berlin.	Mannheim.
Wheat:			
January	152.00	162.62	199.20
February	152.00	161.05	195.60
March	151.00	161.22	195.50
April	163.00	169.87	195.90
May	164.00	174.50	200.30
June	157.50	166.53	196.60
July	160.00	165.88	197.43
August	172.00	172.17	210.00

August	125.00	138.83	153.30
September	141.75	157.10	162.00
October	143.50	159.38	165.40
November	137.00	154.70	166.20

The Königsberg was a good grain, with 75 kilograms to the hectoliter. The Berlin was also good, with 71.5 kilograms to the hectoliter. The Mannheim was made up of grains from the Palatinate, Russia, Bulgaria.

The following table reviews the import and exports of grains, wheat, rye, barley, and oats to and from Mannheim for 1887 and 1888, expressed in tons, by land and water, from January 1 to October 31:

Months.	1888.		1887.	
	Imports by water.	Exports by railroad.	Imports by water.	Exports by railroad.
	Tons.	Tons.	Tons.	Tons.
January	9,140.3	16,252.4	15,975.3	20,325.4
February	6,213.7	11,838.1	3,831.7	16,402.1

Total	202,149.7	187,268.0	197,049.0	207,580.5

TOBACCO.

The year 1888 was, on the whole, a favorable one both for growers and manufacturers of tobacco. Complaint is made against the duties on imported leaves; the more so since the home product seems to get worse and worse. Some manufacturers have found that it pays better to import Java leaves for wrappers at 80 marks tax per 100 kilograms than to use Palatinate leaves at 45 marks per 100 kilograms tax; for experience has fully shown that 1,000 cigars can be covered with 4 pounds Java leaves, while it takes 8 pounds of the inferior Palatinate.

The number of hectares growing tobacco last year was 18,130 against 21,465 for 1887. This decrease is due to the poor quality of Alsatian and Baden tobacco compared with foreign products. German tobacco is heavy and burns hard. Every effort is being made to keep up and get back lost ground, but it seems hardly possible in view of the changed tastes. Men who have once known the pleasures of smoking the good take slowly and unkindly to poor quality; only taxes of an excluding character can succeed in bringing back the lost trade.

CIGAR MAKING.

This branch of trade had no cause to grumble except over inferior quality of home tobacco and some defects in Sumatra leaves sold on this market. The sales were constant and at paying prices. In behalf of employes in cigar factories the Bundesrath passed a law relating to the size and conditions in which rooms where cigars are made must be kept. The law or regulation will work some hardships on men not ready to comply with its requirements; but good must come of it. I was one day, a few weeks ago, in a cigar factory where, in a single room, perhaps 30 by 25 feet, 80 girls and women were employed making cigars. It struck me at the time that something might be done to better their condition. Upon inquiry I learned that these girls made from 250 to 400 cigars a day and got from 23 to 60 cents a day, as wages.

The production of tobacco in Germany is growing less and less; there were cultivated in 1881-'82, 27,248 hectares; 1882-'83, 22,243; 1883-'84, 22,068; 1884-'85, 21,091; 1885-'86, 19,529; 1886-'87, 19,843; 1887-'88, 21,461; 1888-'89, 18,130.

In 1885 Austria-Hungary produced 80,752,900 kilograms; 1885, Russia, 51,024,000; 1887-'88, German Empire, 40,868,113; 1884, France, 16,262,800; 1883, Greece, 7,680,000; 1884, Italy, 6,017,900; 1884, Belgium, 4,713,800; 1884, Netherlands, 2,976,000; 1884, Roumanian, 3,000,000; 1884, Bulgaria, 2,320,000; 1885, Switzerland, 2,000,000; 1885, Servia, 1,500,000.

The impending danger to the tobacco growers of Germany has resulted in united efforts on the part of neighboring provinces to secure better results than those hitherto achieved. To this end experiments on large and small scale have been carried on on the wide plains or fields surrounding this city. These experiments have been watched with jealous care; members of the government, nobility, representative, farmers, and members of agricultural clubs giving them much time and attention. Connecticut seed has produced the best results, thus far, of all those experimented with.

Price (per 100 kilograms) for cigar wrappers, etc.

WINE AND BEER.

The growth of wine and beer drinking in Mannheim has more than kept pace with the growth in population. It is pleasant, when writing of the consumption of these beverages, to be able to add, truthfully, that drunkenness is by no means a besetting sin of Germans, South Germans, at least. They consume, it is true, huge quantities of beer, but seldom get drunk. The abominable system, carried so far in the States, is here unknown. The following table will show the increase of hotels and saloons since 1872:

Year.	Hotels.	Saloons.	Total.	Year.	Hotels.	Saloons.	Total.
	<i>No.</i>	<i>No.</i>	<i>No.</i>		<i>No.</i>	<i>No.</i>	<i>No.</i>

1879.....	47	180	227	1888.....	48	345	393
1880.....	48	187	230				

The wine crop of 1888 took its place far down among the bad ones of the last ten years. Prevailing rains and cold weather kept back the blooming period and retarded the sugar-making period so long and so much that the few sunny days of June, July, and August were powerless to do more than prevent total destruction; anything like a rich crop had been put out of the question. The result was much acid and little sugar in the entire crop. Artificial measures for bettering the product had to be resorted to before purchasers could be found. Never in the history of grape-growing had wine producers done so much to better their wine by scientific methods. Prevailing prices were for wine grown on the high mountains; 180 to 260 marks per 1,000 liters. On the middle slopes, 290 to 520 marks per 1,000 liters, the yeast included. The year's business, on the whole, was much less satisfactory than in 1887, which was not a satisfactory year. The causes operating to keep down trade in 1888 were the bad weather, unfavorable to excursions among the hills, mountains, and summer resorts, and the periods of mourning consequent upon deaths in the royal houses. The business is said to have suffered also from speculation in wine in neighboring provinces. Business in foreign wines, especially those used in mixing, was good; especially in wines from Italy. The tariff war going on between that country and France, by which Italy's wines were practically shut out of France, forced them into German houses, where they sold at fabulously low prices.

Mannheim alone brewed 115,847 hectoliters of beer in 1888, as against 114,776 hectoliters in 1887. The beer taxes brought in in 1888, from 12 breweries, was 586,073.56 marks; from beer imported from Bavaria and other provinces, 104,217.09 marks. There were 90,503.02 marks paid back in drawbacks.

SUGAR.

The year's sugar trade was reported satisfactory; 1888 started out with the price of sugar at "high-water mark," the selling price, wholesale, being 62½ to 63 marks per 100 kilograms, while the Magdeburg quotations for first product corn-sugar, with basis 92° rendement was 25.30 to 25.50 marks and with basis 88°, 24.10 to 24.40 marks. But the start was not maintained; prices fell away until business stagnated. The campaign of 1887-'88 yielded 18,500,000 centners of raw sugar from 136,500,000 centners of roots, where a yield of 17½ was expected; 7.67 centners of roots had yielded 1 centner of raw sugar of course this had its effect. Business was still further affected by a resolution to cover more territory in the production of beets; at first Germany was to increase her amount by at least 10 per cent. and Austria, Holland, and Belgium the same 10 per cent. Later Germany's increase was set at 7 per cent.

In May, 1888, Magdeburg's prices ran: for 92° rendement, 22.50 to 22.85 marks per 100 kilograms; 88° rendement, 21.30 to 21.60 marks.

The price for refined still remained away up at 62½. In October, 1888, the lowest price for corn sugar was reached: 92° rendement, 17 to 17.15 marks; 88° rendement, 16.35 to 16.55. Refined sugar was not so much affected, though it did get down to 60. The new tax on sugar, which went into effect October 1, 1888, had rather a bad than good effect upon refined sugar, for in November, 1888, it went down to 58½ per 100 kilograms.

The following is the year's price-list for refined loaf-sugar:

Months.	First week.	Second week.	Third week.	Fourth week.

PETROLEUM.

Petroleum trade was constant until the beginning of winter, when prices advanced. Russian petroleum, in spite of every effort, has been unable to force its great and successful rival, American petroleum, from German markets. The former's cheapness was more than made up for by the latter's superior quality, increased sales, and lighter specific gravity. The import of the Russian article in tank-ships is still increasing. Some cheaper method to transport American oil should be devised, unless it be known that successful competition is a scientific impossibility; by that I mean unless it is known that science can not refine Russia's article down to our grade or bring it up, if up is the better term. An hour after I had gotten the above opinions another man told me Russian oil is a dangerous rival of American oil already; that Württemberg has been getting Russian oil by way of Trest and Lübeck by rail, and some from Antwerp by water; that a great deal of it comes in tank-ships and tank-cars. The Russian oil is reported as about a mark cheaper than the American; and Germans like cheap goods. The quality of the American is acknowledged to be better than Russia's best.

Petroleum barrels.—A scarcity of these barrels, consequent upon oil coming, now, in tanks, is reported and prices for barrels have gone up. Besides, the drawback order costs now almost as much as the barrel's tax; hence importers are careless about exporting the barrels, it hardly pays time and trouble. A house engaged in re-exporting barrels reports that iron vessels can never successfully fill the wooden ones' places; for they, the iron ones, are easily injured and entail large losses, 20 to 30 marks.

PLANT OILS.

Mannheim is the center of a great district, a good part of which interests itself in the production of various fruit and plant oils; besides doing a profitable business in putting up "preserves." The year 1886, in these branches, was a very satisfactory one. There has been a marked movement upwards, owing, in part, to a general increase in values of plant-increased activity, resulting in larger undertakings and a better condition between prices of production and sales. The principal causes of this favorable turn in affairs will be found in cheaper raw material and a backward movement in the prices obtained for plant and fruit oil-competitors, namely, lard, tallow, palm-oil, etc. There has developed in this industry a feeling of security, and a belief that the plant and fruit oils have won a safe place in public favor.

Cotton-seed oil from America is looked upon as the only really dangerous competitor these other oils have. The tariff regulations of 1879 knew cotton-seed oil as an oil for general trade purposes, and never thought of it as a food oil, and hence put it under the class of oils taxed at 4 marks instead of in the 10-mark class. American skill has succeeded since, however, by means of a most excellent system of cleansing, in producing from this oil a good food oil and one now being acknowledged superior even to olive-oil. The result is that the import of this enemy to home product and industry grows daily more and more a general favorite, until clamor demands that it be put "where it belongs," in the 10-mark tariff list, among food oils. But all this clamoring and petitioning, for the thing has gone up to Government, has

been useless; the only satisfaction given is that it must await a general revision of the tariff. The curious thing observable in the matter is to hear men demanding tariffs against the American product, who are all well-known opponents of all forms of tariff taxes; but they say, "either none or just ones."

RAPE-SEED OIL.

This oil enjoys and has enjoyed good business at good profits, but its future grows day by day more uncertain, at least in branches where it is used for smearing purposes; foreign mineral oils are bound to take its place.

Prices in marks for rape-seed oil for 1888, per 100 kilograms:

January.....	55	July.....	52
February.....	53	August.....	55
March.....	52	September.....	60
April.....	52	October.....	62
May.....	52	November.....	64
June.....	52	December.....	95

Average for the following years:

1888.....	56.25	1883.....	76.73
1887.....	51.81	1882.....	66.67
1886.....	49.33	1881.....	93.58
1885.....	51.13	1880.....	62.50
1884.....	63.17	1879.....	63.25

Palm, cocoanut, and other nut oils used for foods, soaps, and in other branches did a thriving trade. Butter made from cocoanut oil is gaining rapidly in public favor. It is regarded a good, cheap, and healthy article of food; and prejudice once removed will find large favor among classes formerly opposed to any form of butter except that made from milk cream.

TEXTILES.

The textile industries had a good year, although the bad weather of the summer and spring months interfered with sales of prints. In the matter of cotton the Prussian railroads, running from the north sea-ports inland have announced certain reductions in cost of cotton transportation to aid inland manufacturers, and to compete with the cheap water rates. Reports come to me that the conventions, kartella, etc., a kind of organization of manufacturers to regulate, supply, and keep up prices, is finding a corresponding movement on the part of employes, who are combining to keep up wages and regulate hours of labor. Rubber cloths, water-proofs, had an unusually good year; the fact is the rubber-goods houses here seem to get along nicely; much of the capital in these factories here and much of the skilled labor came from the United States. Mr. Hutchinson, an American, head of a large rubber house here, told me that the admission of alcohols and spirits used in his trade to his works free of duty renders it possible for him to do business cheaper here than at home; he can, in fact, manufacture here and export to the United States, and then make money.

WOOD PULP.

The largest establishment for making wood pulp, to be used in the manufacture of paper, is here in Mannheim. The agents of the firm report satisfactory returns for the year 1888, and look forward to increased business in 1889. Cellulose sold at higher prices, England and America buying large quantities. The increased production, consequent upon the favorable condition of the rivers, resulted in a slight drop in prices, 12 cents to 24 on 100 kilograms.

TRAFFIC ON THE RHINE.

The following tables are intended to illustrate Germany's rapid growth in business during the last thirty-five or forty years:

Total traffic on the Rhine.

* From 1861 ships in ballast are not included in the numbers.

CITY TAXES.

The city's land tax is raised on land valued for tax gathering at 5,207,677 marks; taxing value of houses, 84,075,780; of manufactures, etc., 125,905,700; of incomes, 30,852,400. Such is the valuation for 1889; for 1888 they were 5,109,953, 78,152,910, 121,586,800, and 28,863,225, in the order of land, house, manufacture, and income valuation, an increase for 1889 of some 12,000,000.

BOARDS OF TRADE AT HOME AND ABROAD.

The rapid increase of her population, the poverty of her soil, the circumscribed limits of her empire force Germany to seek elsewhere sustenance for the teeming millions of her active people. They are a race not content with mere living. There is a movement setting in stronger and stronger currents towards getting hold of as much of the world's commerce as possible; to this end steam-ship lines are being established and subsidized.

The newly-projected line of steamers to the East Indies can not fail to benefit German manufacturers here in Baden as well as all other parts of the empire. The textile and chemical branches look upon the movement with especial favor. Mannheim sees in a direct line of steamers to Bombay and Calcutta her emancipation from the thralldom of British commission houses. Others see in the movement no prospect of assisting German trade. Men who have spent many years in the import and export trade with India, and have lived many years in Calcutta, say competition with English ships is simply impossible; that ships go now only half loaded; that English vessels make special arrangements to pick up German goods; that tar, cement, and bulky wares go now by sailing vessels as steam rates are too high for such commodities, and that direct lines for Germany will only be possible, when cargoes can be found which will pay for the long passage. Such opinions prevailed when Germany was about to subsidize the post steamers, but did not prove true. Anyway, for good or evil, the die has been cast, Germany is committed to the policy, and has gone in so deep that withdrawal with further experiment and knowledge will not be thought of.

Germany in all her busy centers is interested in training first young men and consuls especially and sending them abroad to drum up trade. Perhaps the most important feature of all this movement is that which aims at establishing all over the world, wherever Germans are engaged in business, chambers of commerce to work in conjunction with German consuls. Their object is to furnish the consul and through him, the mother country, with valuable commercial information, to assist in developing trade with people at home.

. C. MONAGHAN,
Consul.

UNITED STATES CONSULATE,
Mannheim, February 10, 1889.

GREECE.

PATRAS.

REPORT BY CONSUL HANCOCK.

THOS. WOODLEY,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Corfu, December 31, 1888.

PATRAS.

REPORT BY CONSUL HANCOCK.

IMPORTS.

There is very little to report on this head. The sole articles received at this port, direct from the United States, consist of 58,000 cases refined petroleum and 215,000 staves; both these articles show considerable increase over quantities received in 1887, which were 37,748 and 60,000, respectively. Whether the increase in petroleum arises from a less quantity having been smuggled, or it just happens that three arrivals came within the year against two the previous year, I can not ascertain; the monopoly of the Government in this article continues, and the price is maintained the same, 20 francs, gold, per case. The staves continue to give satisfaction, and I expect the quantity will go on increasing.

Plenty of other articles of American manufacture are to be found in the place, chiefly sewing machines, clocks, tinned meats, and fruits, etc., but whether they are ordered direct or bought in other markets, I can not say.

EXPORTS.

Exports to the United States, for which this consulate has certified invoices, amount during the year to the value of \$1,043,077.16, and consist of 13,951 tons of currants, and trifling quantities of wine and salted olives of the value of only \$731.27. As I have pointed out in other reports, to make a comparison with previous years it is necessary to take into consideration the invoices certified at the consular agency of Zante, and these have been kindly given to me by our agent there, and show the value of exports to have been \$172,644.88, consisting of 2,259 tons of currants, and a little wine and green olive-oil soap of the value of \$991.78; it will thus be seen that the total quantity of currants sent to the United States from Greece sum up to 16,210 tons, by far the largest quantity ever shipped in one year. The shipments in 1887 amounted to 12,330 tons; the next largest quantity was in the year 1882, 13,917 tons. The great increase in the quantity has been during the last half of the year, from the crop gathered in July and August, which was exceptionally abundant, indeed the largest ever produced, and prices consequently moderate. Price opened in July, for what is currently known as American staple at equal to 21s. per hundred-weight, cost and freight to New York, but soon receded to 17s. 6d. per hundred-weight, cost and freight, at about which it was maintained until the end of August, when it declined about one shilling per hundred-weight, and varied little until about the middle of October, when a further decline to about 15s. 6d. per hundred-weight, cost and freight, was established, and again toward the end of October there was a fresh decline of a shilling until about the middle of November, when it was 13s. 6d. per hundred-weight, cost and freight, after which some few invoices were presented as low as 11s. 6d. per hundred-weight, cost and freight, and even since the beginning of the year as low as 10s. 6d. and 10s. per hundred-weight, cost and freight, but these are known to have been speculative sales in anticipation of decline on this side, which never occurred, the price here not having been lower than the equivalent of 12s. 6d. per hundred-weight, cost and freight. At the present time the price is equal to about 13s. 6d. per hundred-weight, cost and freight. For the better description of currants considerably higher prices have ruled, say 3s. to 6s. per hundred-weight, according to quality. Of this better class of fruit, much more has gone to America from last season's crop than in previous years, and it is evident some purchasers are giving more care to the quality of the fruit, and they are quite right to do so, for some of the fruit shipped to America has had such a quantity of rubbish mixed with it and must lose such a deal of weight before it can be prepared for consumption, that in the end the price must prove higher than a much better description of fruit would cost. Even the newspapers on this side did not refrain from crying out against some of the wretched stuff that was shipped to America; even charcoal powder, sand, and sea-water were freely added to the fruit to give it color and weight, purchasers being intent only on cheapness and quite regardless of quality. It seems pretty certain, however, that with low prices America can consume even a still greater quantity of currants than she took last year, and people here were immensely pleased when they lately learned that the bill admitting currants on the free list had passed the Senate.

GENERAL TRADE.

Referring now to the *trade* in general of this place, of which currants are always the principal article, the crop will prove even larger than then estimated.

The shipments so far, from the new crop, have been:

	Tons.		Tons.
To United States.....	12,680	To Canada	1,615
To United Kingdom.....	54,648	To Trieste	2,286
To north of Europe	22,128	To Russia	563
To France	22,239		
To Australia.....	1,111	Total	117,270

and it is estimated that about 45,000 tons still remain for shipment, some 4,000 to 5,000 tons of which, however, is said to be of such inferior quality that it is not fit for shipment, and is being distilled in this country. A very disappointing feature in the trade of currants has been the comparatively small quantity taken by France from last season's crop. Vine-growers there have become alarmed at the large quantity of wine produced from currants, and have been agitating for protective duties, and have so far succeeded, that, although no increase of duty has so far been imposed, very restrictive laws have been instituted prohibiting the sale of wine made from currants, excepting under that denomination; and it is still feared that at any moment a heavy increase of duty may be imposed. This has naturally tended to frighten merchants, and is no doubt the reason for the falling off in the quantity. To some extent this has been equalized by the extra quantity taken by Germany and Holland, where it is well known a large portion of the currants taken by those coun-

tries is consumed in the manufacture of wine, not only by special manufacturers, but by families for their private use. The process of making wine from currants is so simple that I am surprised it has not been tried in America. I conclude that it has not been, as currants used for this purpose are generally shipped in bags, the cost being less than when packed in barrels or cases, it being of no consequence if the fruit gets somewhat crushed in transport.

Valonia.—This crop shows considerable increase over last year, being estimated as follows: Etolico, 2,800 tons; achaia, 500 tons; laconia, 4,200 tons; total, 7,500 tons, against 4,700 tons last year. Shipments have only just commenced, quality is fairly good, and price about £10 per ton, free on board. Several small sailing vessels have been chartered to load for England at 30s and 10 per cent per ton.

Olive oil.—This crop has also been fairly abundant, and will allow of about 8,000 tons for exportation; price about £28 per ton, free on board.

Wine.—This crop was short on account of the dry and hot weather in the autumn. The exports from this were of the value of \$66,200 against \$40,700 in 1887; and went chiefly to Hamburg, Amsterdam, and Rotterdam. A small quantity of very fine flavored cognac is now made here superior to many of the French brands. It is sold here in retail at 4 francs per bottle.

A trial has been made of champagne, which seems likely to prove successful.

Tobacco.—This crop continues to increase rapidly and large quantities are now shipped to Turkey and Egypt, but as it is grown principally on the eastern side of the country, I am not in a position to get many particulars. I have however come across some statistics. In four months in 1886 (from September 1, to December 31) the exports to all countries were 1,868,563 pounds of the value of \$130,225. In eight months in 1887 and 1888 they were 3,766,314 pounds of the value of \$238,940, and 4,239,225 pounds of the value of \$272,270, respectively.

IMPORTS.

The trade of this port during the past year will show a slight falling off, but nothing of serious consequence.

Manufactured goods have fairly kept their ground, and iron and machinery, independent of what has come for the railways, will show an increase.

Coals.—The imports have been 19,023 tons, against 20,723 tons, in 1887; price has ranged from 22s. 6d. to 25s. per ton.

Dried codfish.—Nine cargoes of Labrador arrived at this port during the year, bringing 27,530 quintals, besides about 1,000 quintals arrived from Italy. The first arrivals in the autumn realized very good prices, say 21s. 6d. per quintal, to pay cost, insurance, and freight, and 19s. 6d. and 18s. 6d.; but these high prices induced too heavy consignments, besides there were also heavy arrivals at the neighboring port of Zante, so that the markets became glutted, and a great deal of fish had to be stored, where it still remains, and it will now scarcely realize 12s. per quintal c. i. and f.

Cereals received at this port during the past year have been: Wheat, 155,000 quarters; maize, 14,000 quarters; barley, 2,500 quarters; oats, 650 quarters; total, 172,150, against 177,100 quarters in 1887.

Prices have ranged in bond about for:

	<i>Per quarter.</i>		<i>Per quarter.</i>
Wheat	\$12.04	Barley	\$5.72
Maize	8.23	Oats	8.93

Minerals.—A thousand tons of sulphur were received from Milos (the small island in the Greek Archipelago). It is used when ground into very fine powder for dusting the vines as a prevention against the Oidium. We have fortunately so far escaped phylloxera.

SHIPPING.

The bulk of the import and export trade of this port has as hitherto been under the British flag. The foreign shipping here during the year has been:

Countries.	Vessels.	Quantity.
	No.	Tons.
British	131	116,047
German	12	7,765
Belgian	6	6,266
Italian	5	3,827
Norwegian	6	2,011
Dutch	3	2,981
French	1	794

Freights have ruled about as follows; to—

	<i>s. d.</i>
New York.....	27-6 in full per ton.
London.....	25-0 in full per ton.
Liverpool.....	25-0 in full per ton.
Montreal.....	35-0 and 10 per cent. per ton.
North of Europe.....	25-0 and 10 per cent. per ton.
<i>France.</i>	
Marseilles.....	18 in full per ton.
Rouen.....	28 in full per ton.

Four passenger steamers run to and from Brindisi weekly, viz: Tuesday, Italian; Wednesday, Greek; Thursday, Austrian; Saturday, Italian, and an Austrian and a Greek steamer run fortnightly from Trieste to Constantinople, calling at this port.

CURRENCY.

Of late there has been some improvement in the value, and efforts are being made to do away with the forced paper, but this is not likely to be effected for the next four or five years.

The following have been about the rates of exchange for commercial bills during the last year:

	Per £.		Per £.
January.....drachmas..	32.40	July.....drachmas..	31.30
February.....do....	32.40	August.....do....	31.70
March.....do....	32.30	September.....do....	31.00
April.....do....	32.60	October.....do....	31.65
May.....do....	32.40	November.....do....	31.60
June.....do....	31.20	December.....do....	30.90

PUBLIC WORKS.

Railways.—The line between here and Athens has now been working for rather more than a year, and I understand the receipts are satisfactory and go on increasing; two trains leave and arrive from Athens daily and there is a third train to and from Acrata.

The line between here and Pyrgos is progressing rapidly, and has already been opened as far as the village of Achaia.

Another line between Myli and Calamata has been commenced, and a line between Calamata and Pyrgos is contemplated, which would complete the circuit of the Morea.

The Athens newspapers announce that the Government have just concluded an arrangement with an English company for a line between Piræus and Larissa. It is valued at 70,000,000 francs, on which the Government guaranty 6 per cent. per annum for ninety-nine years, after which the line, plant, and rolling-stock will become public property. The company have undertaken to arrange with the port for the union of the line with that of Salonica; otherwise no interest will be guaranteed for six years. The union of these lines would bring Greece in conjunction with the Continental system of railways, and thus make an opening for a new route to Alexandria of considerably shorter sea voyage than from Brindisi.

Canal at the Isthmus of Corinth.—This work is progressing, but difficulties continue to crop up, not only financially but otherwise. The governing committee have lately decided to defer payment of interest to the shareholders, and it has been found that the cutting is too perpendicular and considerable slope will have to be given to prevent land-slips, and in some places it will be necessary to build up to protect the sides. Originally it was estimated that the 8,000,000 cubic meters required to be excavated at a cost of 30,000,000 francs, including 5 per cent. interest to the shareholders, and that the cutting would have been completed last November; in consequence of the increase of slope it is now reckoned that 10,000,000 cubic meters require to be extracted, and that the cost will be increased to 60,000,000 francs, and that the canal can not be finished before November, 1891.

Patras breakwater.—The dispute between the committee and the contractors have been arranged by giving the contractors 50 per cent. more for the work than previously stipulated and making fresh contracts for lengthening the breakwater and making quays, etc., which when completed will make a good port.

E. HANCOCK,
Consul.

UNITED STATES CONSULATE,
Patras, February 15, 1890.

ITALY.

REPORT BY CONSUL-GENERAL ALDEN FOR THE YEAR 1887.

POPULATION.

The population of Italy on December 31, 1887, was 30,260,065, an increase of 317,923 during the year. There was a creditable decrease of the death rate per 1,000, from 28.21 in 1886 to 27.56 in 1887, which was unquestionably due to increased attention given to sanitary matters since the appearance of the cholera in Italy.

Population of Italy for the years 1886 and 1887.

Details.	1886.	1887.
Total population on December 31.....	29,942,142	30,260,065
Marriages.....	233,310	233,338
Births (not including still births).....	1,086,960	1,152,020
Deaths (not including still births).....	844,603	834,007
Marriages per 1,000.....	7.79	7.71
Births per 1,000.....	36.80	38.07
Deaths per 1,000.....	28.21	27.56

AGRICULTURE.

An increase in the wheat and Indian corn crops, a marked decrease in the olive oil crop, and a less important decrease in the wine crop are the chief features of the Italian crops in 1887 as compared with 1886.

Italian crops in 1886 and 1887.

Articles.	1886.		1887.	
	Total quantity.	Per-centage of ordinary crop.	Total quantity.	Per-centage of ordinary crop.

Grasses..... do..	18,615,222,856	18,820,465,881
Hay..... do..	15,480,301,559	13,574,465,859

The foregoing figures were published in the various numbers of the *Bollettino de Notizie Agrarie*, issued by the *Direzione General dell' Agricoltura*, and are thus official, although they were not collected by the *Direzione General della Statistica*, which is the chief authority in Italy in matters of statistics.

FISHERIES.

In 1886 there were employed in the Italian fisheries 17,498 vessels of the aggregate tonnage of 50,510, manned by 50,734 men and boys. In 1887 the number of vessels so employed, and their aggregate tonnage, were respectively 18,279 and 51,387; and the number of men and boys employed were 52,422.

This increase was principally in the fish fisheries—if they may be so called—in which there was an increase in 1887 of 1,644 tons. There was in 1887 a slight decrease in the tonnage of vessels and number of men employed in the coral and sponge fisheries.

MINES.

The latest attainable statistics as to Italian mines are those of 1886. The following statement shows the product of these mines in that year, and the number of miners employed.

Italian mines and their products.

Character of mines.	Mines.	Miners.	Ore extracted.	Value.
			<i>Tons.</i>	
Iron	41	1,683	209,082	\$442,443
Manganese	5	148	5,561	80,942
Copper	8	1,037	25,182	112,312
Lead	76	8,615	89,841	1,375,774
Zinc			107,548	1,334,008
Lead and zinc	3	109	982	2,484
Silver	7	1,283	1,639	373,190
Gold	12	519	10,759	102,501
Antimony	11	420	1,728	38,560
Quicksilver	2	393	1,250	179,463
Iron pyrites	6	221	17,149	29,380
Coal, lignite, etc.	24	2,629	248,325	348,122
Sulphur	403	29,875	374,948	5,896,720
Rock-salt	24	585	18,894	58,153
Salts of springs	2	213	10,881	60,120
Asphalt, mastic and bitumen	15	498	17,948	74,932
Petroleum	7	145	219	17,588
Alum	1	93	6,000	34,740
Boric acid	12	564	3,063	295,660
Graphite	8	110	4,000	80,880
Total in 1886	667	49,237	1,097,830	10,243,203
Total in 1885	613	51,791	1,076,452	11,879,820
Difference	54	2,554	19,378	1,136,617

There was in 1886, as compared with 1885, an increase in the production of coal and lignite and a decrease in the production of sulphur. The aggregate product of Italian mines showed little variation in 1885 and 1886.

EDUCATION.

The percentage of Italians who can neither read nor write can not be actually known until the next general census, but a fair estimate would make the percentage to-day not larger than .56. It decreases steadily every year.

In the scholastic year 1884-'85 (than which no later statistics are attainable) there were in the Italian elementary school—including infant asylums—2,937,015, of whom 1,630,126 were males and 1,306,889 were females. The increase in the total number of pupils as compared with the preceding scholastic year was 359,453.

The statistics given in the following statement are for the scholastic year 1885-'86. They show an increase of 1,438 in the number of pupils attending the secondary schools in that year.

Italian secondary schools in 1885-'86.

Schools.	Schools.	Pupils.
CLASSICAL SCHOOLS.		
Gymnasias:		
Government	130	15,702
All other	597	81,528
Total	727	47,230
Lyceums:		
Government	97	7,219
All other	229	6,477
Total	326	13,696
TECHNICAL SCHOOLS.		
Technical schools:		
Government	107	10,945
All other	818	16,186
Total	425	27,131
Technical institutes:		
Government	46	5,523
All other	27	1,858
Total	73	7,381
Mercantile-marine institutes:		
Government	20	708
All other	4	66
Total	24	774
Grand total	1,575	96,212

There was a decrease in the number of secondary schools in the scholastic year 1885-'86, compared with the preceding year, of 25. This decrease, however, was not attended by any decrease in the number of pupils.

The number of pupils in the Italian Universities and the superior institutes and special schools increased in 1885-'86, from 16,591 to 17,240. As to the schools for special instructions, the statistics are complete with one exception, for the scholastic year 1886-'87, but they show no substantial change in the number of pupils.

Italian universities, superior institutes, and special schools in 1885-'86.

Description.	Institu- tions.	Pupils.
Universities:		
Government	17	14,500
Free	4	817

GOVERNMENT LIBRARIES.

There are in Italy thirty-two Government public libraries which had, in 1886, 758,133 readers; the number of books called for was 1,019,354. There is also a very large number of libraries belonging to communes and to private persons, which are practically open to the public.

CRIME.

The following statement shows the extent of crime in Italy in 1885 and 1886:

Character of crimes.	Crimes committed.		Crimes of which criminals were convicted.							
			By pretors.		By tribunals.		By courts of assizes.		Total.	
	1885.	1886.	1885.	1886.	1885.	1886.	1885.	1886.	1885.	1886.
Homicides:										
Committed	1,716	1,669			108	136	1,563	1,476	1,671	1,612
Attempted	2,141	2,142			90	172	520	495	610	667
Infanticides:										
Committed	266	249			2	1	75	76	77	77
Attempted	31	26			2	1		1	2	2
Assaults and batteries.....	43,187	47,555	51,566	55,765	9,282	9,157	569	410	61,417	65,332
Robberies:										
With homicides	134	131			11	14	74	58	85	72
Without homicides.....	1,975	2,093			171	128	420	379	591	507
Thefts:										
Qualified	34,229	34,952			6,239	6,606	1,245	1,295	7,484	7,901
Simple	31,189	33,185	39,690	42,266	4,726	4,605	35	82	44,441	46,908

As is seen from the foregoing statement, the number of crimes committed in 1886 was very nearly the same as the number committed in 1885. The slight increase in 1886 was chiefly in assaults and batteries, and there was a slight decrease in homicides and infanticides.

EMIGRATION.

The following statement shows the destination of Italian emigrants in 1886 and 1887.

Destination.	1886.	1887.	Difference.
Canada	1,720	1,632	— 88
United States	26,920	37,221	+ 10,301
Mexico and Central America (excluding the Antilles)	494	746	+ 252
Total	29,134	39,599	+ 10,465
Argentine Republic	86,534	52,383	+ 15,849
Uruguay	1,202	1,295	+ 93
Paraguay	647	821	+ 174
Brazil	11,334	31,445	+ 20,111
Other American States (including the Antilles)	3,815	3,920	+ 605
Total	53,032	89,864	+ 36,832
Total emigration to North and South America	82,166	129,463	+ 47,297
Algiers	2,243	1,375	— 868
Egypt	740	967	— 127
Tunis	1,657	633	— 924
Other African countries	424	576	+ 152
Total	4,964	3,451	+ 1,513
Asia	62	61	— 1
Oceania	231	216	— 15
Total emigration to non-European countries	87,423	133,191	+ 45,768
Emigration to European countries	80,406	82,474	+ 2,068
Grand total	167,829	215,665	+ 47,636

Of the total increase in emigration in 1887 (47,636) almost the whole was in the direction of North and South America (47,297). The increase of emigration to South America (36,832) was very much greater than the increase to the United States (10,301). Of the South American States Brazil and the Argentine Republic, both of which render assistance to emigrants coming from Italy, almost monopolized Italian emigration in 1887. The Italian Government, while necessarily recognizing the right of its citizens to emigrate, naturally dislikes to lose their services, and nothing could be further from the truth than the theory that the Italian Government is anxious to rid itself of a supposed surplus population.

The climate in South America is so much better suited to Italians than is that of the United States that they would naturally seek the former continent. Many of the poorer classes do not, however, know any difference between the United States and the Argentine Republic, and there is no doubt that many go to the United States under the mistaken impression that they are going to South America.

RAILWAYS.

The total length of the railway lines in Italy on June 30, 1888, was as follows:

	Miles.
Mediterranean Company	2,883½
Adriatic Company	3,883½
Sicilian Company	420
Sardinian Company	256½
All other companies	908½
Total	8,351½

The following statement shows the new lines of railway opened between July 1, 1887, and June 30, 1888:

Company to which new line belongs.	Extent of line.	Date of opening from July, 1887, to June, 1888.	Length.
			<i>Miles.</i>
Mediterranean	{ From Cuneo to Robilante	July 16	10½
	{ From Cuneo to Rocca del Baldi	Oct. 8	12½
	{ From Rocca del Baldi to Mondou	Feb. 18	7½
	{ From Rome to Tivoli	Aug. 1	25
	{ From Foggia to Lucera	Aug. 1	12½
Adriatic	{ From Naples to Porto di Massa	Apr. 9	18
	{ From Massa Lombardo to Lugo	Apr. 12	54
	{ From S. Giovanni to Crevalcore	June 9	54
Sicilian	{ Side tracks, etc.	Sept. 20	4
	{ From Budrio to Medicina	July 16	6½
	{ From Budrio to Molinella	Aug. 16	10
Bologna and Porto Maggiore	{ From Medicina to Massa Lombardo	Dec. 4	9½
	{ From Molinella to Porto Maggiore	Dec. 21	3½
Settimo and Castellamonte	{ From Rivarolo to Castellamonte	July 25	5
Novara and Seregno	{ From Bi-ta-Aresio to Seregno	Oct. 5	8½
	{ From Saronno to Seregno	Dec. 31	2½
Ventoso-Reggio and Susalatta	{ From Correggio to Carpi	Oct. 15	6½
Sardinia, Secondary Railway	{ From Cagliari to Isili	Feb. 15	56½
	{ From Monte to Tempeo	Feb. 15	25
Total			237½

The present railway from Rome to Naples has many steep grades and makes many detours to reach small towns. The Government has decided to shorten the present line by straightening it and by reducing the grades. It has also decided to build a new line along the coast. By either of the lines, when completed, the length of the trip between Rome and Naples will be shortened from six to four and one-half hours.

The new road from Florence to Bologna by way of Faenza, and the new road from Spezia to Lucia will, it is expected, be opened within a year.

No accidents of any consequence have occurred on the Italian railways for many years, which is a sufficient proof of the care with which they are managed.

The following statement shows the receipts of the three chief railway companies during the year ending June 30, 1888:

Receipts of the three chief railway companies during the year ending June 30, 1888.

Receipts.	Mediterranean.	Adriatic.	Sicilian.	Total.
Passengers	\$0, 257, 835	\$7, 737, 199	\$604, 145	\$17, 599, 185
Luggage	447, 443	352, 193	11, 860	811, 694
Express freight	2, 245, 571	2, 341, 307	62, 620	4, 649, 505
Ordinary freight	11, 097, 021	8, 932, 891	630, 241	20, 710, 654
All other receipts	146, 778	206, 529	14, 247	428, 555
Total	13, 194, 647	19, 629, 614	1, 373, 113	44, 199, 593

The total receipts of all the Italian railways from July 1, 1887, to June 30, 1888, were \$46,324,067.

The receipts per kilometer during the same period were for the four chief companies:

Mediterranean Company	\$5, 043
Adriatic Company	4, 085
Sicilian Company	11, 046
Sardinian Company	816

The average receipts per kilometer for all Italian railways, from July 1, 1887, to June 30, 1888, were \$3,925.

POSTS AND TELEGRAPHS.

Posts.—No statistics in regard to the Italian post-office have been published since the period covered in my last annual report, and no statistics later than those can be obtained.

Telegraphs.—The following statement shows the extent and condition of the Italian telegraphs on June 30, 1888:

Length of Government and railway wires.....	miles..	70, 590
Length of Government and railway lines.....	do.....	20, 290
Length of Government submarine cables.....	do.....	115
Increase in length of wires from June 30, 1886, to June 30, 1887.....	do.....	2, 523
Increase in length of wires from June 30, 1886, to June 30, 1887.....	do.....	1, 372
Number of Government officers on June 30, 1888.....		2, 160
Number of Government employes on June 30, 1888.....		6, 817
Number of Government semaphore offices, June 30, 1888.....		32
Number of Government telegraphic apparatus (Morse and Hughes) in Government offices June 30, 1888.....		3, 435

Telegraphic business in Government offices.

Description.	1885-'86.	1886-'87.
Telegrams sent:		
Private:		
Foreign.....	6, 091, 589	6, 343, 034
Domestic.....	597, 306	652, 410
Government.....	505, 744	516, 510
Telegrams received from abroad.....	709, 069	792, 064
Telegrams in transit (international).....	179, 283	230, 882
Total.....	8, 077, 991	8, 539, 890

Receipts and expenses of Government telegraph.

	1885-'86.	1886-'87.
Receipts:		
From telegrams.....	\$2, 474, 600	\$2, 617, 237
From other sources.....	110, 205	107, 980
Total.....	2, 584, 805	2, 725, 217
Expenses:		
Working expenses.....	2, 015, 931	2, 161, 890
Working of semaphores.....	36, 133	34, 566
All other expenses.....	155, 619	141, 752
Total.....	2, 207, 683	2, 338, 214

As will be seen by the preceding statement, the statistics as to telegraphs are not as complete as could be desired.

The increase in the number of telegrams sent and received in the year 1886-'87, as compared with the year 1885-'86, was 511,899. The excess of receipts over expenses in 1885-'86 was \$377,122, and in 1886-'87 was \$387,003.

ARMY.

On the 30th of June, 1887, the strength of the Italian army was as follows:

Service.	Officers.	Men.	Total.
Permanent army:			
With the colors	12,559	236,822	249,381
On unlimited furlough		646,672	646,672
Supernumerary officers awaiting orders	4,239		4,239
Total	17,798	871,494	889,292
Mobile militia:	2,914	295,674	298,588
Territorial militia	5,390	1,463,690	1,469,080
Officers in auxiliary service and on reserve	6,125		6,125
Total	32,227	2,570,228	2,602,455
Total on June 30, 1886	31,193	2,464,480	2,495,673
Increase	1,034	105,748	106,782

The permanent army is now armed with repeating rifles, and the mobile militia will soon receive the same arm. Every year the influx of trained men into the territorial army improves its efficiency. The spirit and discipline of the whole army are beyond praise, and the fact that Italy can place on the field nearly 1,000,000 of trained men in the first line, and 300,000 in the second, besides 1,500,000 of more or less trained men of the territorial army, makes good her claim to be classed as a sixth great power.

NAVY.

Vessels in active service on January 1, 1888.

ARMORED SHIPS.

Of the great Italian armored battle ships, the following are now ready for service.

Name.	Tonnage.	Horse power.	Speed.
			<i>Knots.</i>
Lepanto	13,550	18,000	17.8
Italia	13,360	18,000	17.8
Duilio	11,607	7,711	15.4
Dandolo	11,898	7,710	15.6

The *Ruggiero di Lauria*, of the same class as the *Duilio*, will be ready for sea within 1888. The *Morosini* and the *Dona*, of the same class, will be ready for sea within twelve months. The *Re Umberto* (launched in October, 1888) will be ready in two years. Two other ships, the *Sicilia* and the *Sardegna*, all of the class of the *Lepanto*, are on the stocks.

TORPEDO RAMS.

The class of vessels called torpedo rams, which are partially armored, promise to prove very effective as cruisers. Of these the following are now in commission :

Name.	Tonnage.	Horse power.	Speed.
			<i>Knots.</i>
Etna	3,530	7,500	17.0
Ranar	3,530	4,978	17.4
Strombole	3,530	7,500	17.0
Vesuvio	3,290	7,700	17.0
Dogali	3,530	7,500	19.2

The *Fieramosca*, another vessel of the same class of the *Dogali*, was launched (in England) in September, 1888, and is guaranteed a speed of 21 knots by Messrs. Armstrong & Co., her builders. She will be added to the active list of the Italian navy within a year.

Another very efficient class of cruising ships are those of the *Gotto* class. The following are now in commission :

Name.	Tonnage.	Horse-power.	Speed.
			<i>Knots.</i>
Gotto	741	4,200	18
Tripoli	800	2,550	19.2

The *Folgore* and the *Salta* have the respective velocities of 20 knots each.

THE WHOLE NAVY.

The Italian navy, formidable as it now is for the speed, armament, and armor of its fleet will not be completed, according to the present scheme, for nearly four years. At the expiration of that time it will include the following vessels:

Total list of Italian naval vessels.

Class.	Number.	Material of hull.					Tonnage.	Horse-power indicated.
		Of iron.	Of steel.	Of iron and steel.	Of wood.			
					Exclusively.	Partly.		
Fighting ships:								
First class	18	5	8	2	3	162, 227	150, 127
Second class:

*Not including the engine of the *Venezia*.

BOOKS AND PERIODICALS.

The number and class of books and periodicals published in Italy in 1887 were as follows:

Class.	Number.	Class.	Number.
Bibliography	97	Physical science	379
Encyclopædias	4	Medicine	670
Philosophy, theology, and religion	124	Engineering	236
Education	1, 036	Military and naval	185
History and geography	606	Fine arts	200
Contemporary biography	539	Agriculture, industry, and commerce	1, 168
Philology and history of literature	352	Laws, statutes, etc	704
Poetry	392	Miscellaneous	1, 430
Romances and novels	336	Statistics	1, 443
Dramatic works	218	New periodicals	197
Jurisprudence	396		
Politics and social science	449	Total	11, 161

This shows a slight increase as compared with the publications of 1886. It is noteworthy that 197 new periodicals were published in 1887, and only 24 in 1886.

COINAGE.

Money coined by the Italian Government in 1887 compared with 1886.

Year—	Gold.	Silver.	Bronze.	Total.
1886.....	\$227, 776	\$2, 006, 776	\$19, 300	\$2, 253, 846
1887.....		6, 041, 797		6, 041, 797

No gold or bronze money was coined in 1887.

NAVIGATION.

The entrances and clearances at Italian ports in 1886 and 1887 were as follows :

Total entries and clearances in 1887.....	231, 518	40, 588, 605
Difference	+4, 745	+3, 450, 763

Although there was thus a substantial increase, in 1887, there was a decrease in the number and tonnage of foreign steamers engaged in the Italian coasting trade and entered at Italian ports in that year. This was due to the fact that the termination of the commercial treaty between France and Italy debarred French vessels from the Italian coasting trade.

Entries and clearances at all Italian ports of vessels engaged exclusively in deep-sea fisheries in 1886 and 1887.

Year.	Number.	Tonnage.
1886.....	2,605	20,607
1887.....	2,787	22,133
Difference.....	+182	+1,526

Entries, clearances, and tonnage of vessels under foreign flags during the years 1886 and 1887.

Flag.	1886.		1887.	
	No.	Tons.	No.	Tons.
English.....	9,879	9,415,598	11,115	11,292,369
French.....	3,768	2,770,230	2,310	1,300,375
German.....	1,160	971,926	1,060	1,028,199
Australian.....	1,300	373,212	3,186	1,013,767
Greek.....	2,035	865,873	1,298	341,979
American.....	23	19,712	55	16,443
All other foreign flags.....	2,411	1,301,526	2,510	1,429,699
Total.....	20,576	15,217,594	21,534	16,422,831
Difference in 1887.....			+958	+1,205,237

The increase shown in the foregoing table is not very large, still it is an increase, whereas in 1886 as compared with the preceding year there had been a decrease of 2,067 in the number of vessels and 397,177 in the number of tons.

Number and tonnage of American vessels entering and clearing at the six principal Italian ports in 1886 and 1887.

Ports.	1886.				1887.			
	Arrivals.		Departures.		Arrivals.		Departures.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.
Calama.....	1	1,940	1	1,810				
Genoa.....	1	350	1	356

Grand total.....	299	267,852	199,617	400	451,986	268,418

The number of tons of freight entered and cleared at Italian ports in 1886 by vessels trading with the United States and Canada were: Tons of freight entered, 216,249; decrease in 1887, 16,632; tons of freight cleared, 378,634; decrease in 1887, 110,216.

In 1886 as compared with 1885 there had been a decrease of 1,916 tons in the quantity of freight entered, and an increase of 73,043 tons in the quantity of freight cleared.

MERCANTILE MARINE.

Number, tonnage, and value of merchant vessels launched in Italy in 1886 and 1887.

Year.	Ship-yard.	Vessels.	Tonnage.	Value of hull including machinery of steamer.	Average value.
1886.....	43	193	12,020	\$337,192.00	\$1,747.22
1887.....	38	167	5,663	353,391.67	2,116.05
Difference.....	-5	-26	-6,357	16,199.67	-368.83

Of the vessels launched in 1887, 11 were steamers (of which 10 were tugs) of a total tonnage of 393 tons. No vessel larger than 500 tons was launched in 1887. The bounties offered to Italian ship-builders have not so far built up the merchant marine.

Number and tonnage of sailing vessels belonging to the Italian mercantile marine in 1887.

Size.	Vessels.	Tonnage.	Size.	Vessels.	Tonnage.
1 to 10 tons.....	2,217	14,165	701 to 800 tons.....	84	63,141
11 to 20 tons.....	1,601	29,212	801 to 900 tons.....	54	46,270
21 to 30 tons.....	809	32,636	901 to 1000 tons.....	31	29,443
31 to 40 tons.....	618	48,239	1001 to 1600 tons.....	27	31,373
41 to 50 tons.....	348	49,421			
51 to 60 tons.....	191	47,611	Total.....	6,727	732,494
61 to 70 tons.....	185	65,336	Total in 1886.....	6,992	801,349
71 to 80 tons.....	259	116,659			
81 to 90 tons.....	175	95,883	Difference.....	-265	-68,855
91 to 100 tons.....	98	63,106			

The decrease in the number and tonnage of sailing vessels, as compared with 1885, was 119, and 27,470 tons. The decrease in the last year has therefore been very much larger.

Number and tonnage of steamers belonging to the Italian mercantile marine in 1887.

Size.	Vessels.	Tonnage.	Size.	Vessels.	Tonnage.
1 to 50 tons.....	64	1,270	1,001 to 1,500 tons.....	33	40,780
51 to 100 tons.....	14	1,082	Above 1,500 tons.....	33	70,092
101 to 200 tons.....	17	2,332			
201 to 400 tons.....	38	10,890	Total.....	254	163,131
401 to 600 tons.....	23	11,124	Total in 1886.....	237	144,328
601 to 800 tons.....	20	14,191	Difference.....	+17	+18,803
801 to 1,000 tons.....	13	11,461			

While there has thus been a respectable increase in the tonnage of the Italian steam mercantile fleet in 1887, it has not been sufficient to compensate for the decrease in tonnage of the sailing fleet.

Number and tonnage of Italian sailing vessels in 1887 compared with the four preceding biennial periods.

It is noticeable that in the last biennial period, during which the policy of paying bounties to ship-builders has been followed, the increase in the number of Italian steamers has been less than in the preceding biennial period.

Number of men employed in the Italian mercantile marine in 1887.

Occupation.	Number.	Occupation.	Number.
Masters	6, 858	Carpenters, etc	12, 061
Mates	8, 374	Workmen on iron-ship-building	2, 950
Pursers and clerks	601	Coast fishermen	45, 765
Deep-sea fishermen	6, 657	Boatmen	12, 604
Able seamen and boys	90, 488	Pilots	277
Engineers	552		
Firemen	4, 450	Total	198, 117
Ordinary seamen	7, 609	Total in 1886	189, 921
Naval engineers	30		
Naval contractors	241	Difference	+5, 196

The men of the mercantile marine are also enrolled on the naval reserve, and form a splendid body of seamen.

Wrecks in Italian waters in 1887.

Kind.	Number.	Tons.
Italian vessels wrecked	107	11, 095
Foreign vessels wrecked	12	4, 421
Total	119	15, 516
Total wrecks of Italian vessels in Italian and foreign waters	210	58, 455
Total wrecks of Italian vessels in 1886	182	26, 527
Difference	+78	31, 928

There were 557 desertions from Italian vessels in 1887, being 24 less than in 1886. One hundred and eighty-one of these took place in the United States.

SHIPPING BOUNTIES.

The law of December, 1885, the provisions of which were set forth in the two last annual reports from this office, has now been in operation for nearly two years. The following statement shows the bounties paid for ship building in 1887:

Vessels built.	No.	Amount paid.
Sailing vessels:		
Wood	150	\$15, 191
Iron	1	} 1, 968
Steamers of iron or steel	8	
Tugs	6	
Engines and boilers	28	3, 975
Total		21, 184

Bounties paid for repairs to vessels, machinery, and boilers in 1887.

For what paid.	Amount paid.
Repairs to—	
Vessels	\$21, 580
Engines	3, 242
Boilers	9, 961
Total	34, 783

Bounties paid to vessels bringing coal into Italy in 1887.

Class.	Received bounty.	Tons brought.	Amount paid.
Sailing vessels	107	95,145,720	} \$33,444
Steamers	11	78,143,080	
Total	118	173,288,800	33,444

Number and character of voyages made by Italian steamers in 1887, for which bounties were paid.

Voyages.		No.	Freight.	Passen- gers.	Miles run.	Bounty paid.

Animals, and animal products	21,300,300	28,965,774	22,090,672	19,285,927
Miscellaneous	9,858,738	10,565,129	2,162,076	1,967,656
Total	291,614,294	327,102,883	297,687,633	314,111,193

As is seen from the foregoing table, the imports in 1887 were \$35,488,089 more than the imports in 1886, and the exports in 1887 were \$6,423,559 more than in 1886.

The following statement shows the categories in which these differences occurred :

Articles.	Imports.		Exports.	
	Increase in 1887.	Decrease in 1887.	Increase in 1887.	Decrease in 1887.
Wine, spirits, and oils		\$1,283,161	\$5,034,392	
Groceries, spices, and tobacco	\$8,194,104			\$68,163
Chemicals, drugs, resins, and perfumery	1,668,648		909,070	
Dyes, dye-stuffs, and articles for tanning	107,784			103,584
Hemp, flax, jute, etc.	1,843,381		163,550	
Cotton	4,872,100			566,813
Wool and hair	798,098			732,964
Silk		769,993		5,694,815
Wood and straw	3,201,264		184,767	
Books and paper	1,591,009		10,515,212	
Skins, hides, and furs		2,131,609	401,256	
Minerals and metals	15,180,563			1,390,666
Stone, earthen, pottery, and glass	3,687,979			
Cereals, flour, and vegetable products	246,135		2,529,010	
Animals, and animal products		434,526		2,804,745
Miscellaneous	706,403			291,420
Total	40,107,468	4,619,379	19,737,257	13,313,698

The large decrease in the export of silk, as shown in the foregoing statement, was due to the tariff war with France. To a large extent the decrease in other articles of export was due to the same cause.

Without doubt very large importations were made in 1887, before the final expiration of the treaty with France, with a view to that event. This, however, does not alone explain the increase of imports in 1887, since there was an increase in many articles which are not imported from France.

Commerce of Italy with other nations in 1886 and 1887.

Countries.	Imports.		Exports.	
	1886.	1887.	1886.	1887.

CHOLERA.

The cholera epidemic in Italy has totally ceased. With the possible exception of sporadic cases, there has been no case of cholera in Italy since December 20, 1887. In 1887 there were 12,537 cases and 6,842 deaths, distributed as follows:

Cholera in Italy in 1837.

TREATIES.

No treaty between France and Italy has yet been signed, and the tariff war still continues between the two countries. Great distress has been caused among wine-growers in Italy, especially in the southeastern provinces. Hitherto there has been an immense exportation of Italian wines to France, where they were made into so-called French wines. The tariff war has completely stopped the exportation, and the consequent financial distress among Italian wine-growers has been very great.

The following treaties of trade and commerce between Italy and other powers have been signed since June 30, 1887: A treaty with Austria signed December 7, 1887; a treaty with Spain signed February 26, 1888, and a treaty with Switzerland signed February 29, 1888.

REVENUE AND EXPENDITURES.

Revenue and expenditures of the Italian Government for the fiscal year ending June 30, 1888.

RECEIPTS.

Sources.	Amount.	Sources.	Amount.
Ordinary Revenue.		MISCELLANEOUS TAXES—continued.	
DIRECT TAXES.		State lottery	\$14,725,900

MISCELLANEOUS TAXES.		Total	82,568,938
Fines and penalties	886	Total ordinary and extraordinary	386,982,355

* The discrepancy between the receipts of the State telegraphs, as given here and in a foregoing table, is due to the fact that the figures are obtained from two different sources, both official.

*Revenue and expenditures of the Italian Government, etc.—Continued.***EXPENDITURES.**

Departments.	Amount.	Departments.	Amount.
Treasury	\$158,123,995	Agriculture, industry, and commerce	\$3,177,292
Finance	35,808,641	Total	385,993,373
Grace and justice	6,467,816	Total receipts	386,982,355
Foreign affairs	1,546,925	Total expenses	385,993,373
Public instruction	7,909,181	Difference	+988,982
Interior	13,001,489		
Public works	77,991,564		
War	61,158,355		
Navy	20,818,115		

There was thus, by the official showing, a small surplus of receipts over expenditures in the fiscal year 1887-'88. The estimate for the present fiscal year reduces both expenses and receipts, but shows a small deficit of about \$2,000,000.

PUBLIC DEBT.

On the 30th of June, 1888, the interest on the public debt of Italy, including the floating debt, was \$108,582,457. The figures showing the amount of the public debt will not be published until late in November, at the earliest.

The debt was composed as follows:

Debt.	Capital.	Interest.	Debt.	Capital.	Interest.
Consolidated debt:			Various debts	(†)	14,262,405
At 5 per cent.	(†)	\$85,371,668	Floating debt	(†)	2,808,851
At 3 per cent.	(†)	1,236,769	Total		108,582,457
Permanent rents in the name of the Holy See	(†)	622,425			
Debts separately inscribed in the great book	(†)	4,280,349			

† Figures not yet attainable.

ITALIAN BONDS.

The prices of Italian bonds (5 per cent.) on the Roman Bourse since January 1, 1887, have been as follows:

Maximum price	100.75
Minimum price	92.82
Average price	98.51

W. L. ALDEN,
Consul-General.

CONSULATE OF THE UNITED STATES,
Rome, October 18, 1887.

CATANIA.

REPORT BY CONSUL LAMANTIA.

GENERAL REMARKS.

During the year 1888 a very serious crisis, both commercial and financial, traversed the whole of this island, and left its impression on the several products of the soil as well as on labor, and reducing the import and export trade of this entire consular district. The wine, fruit, sweet-oil, sumac, and sulphur trade have undergone a considerable fall in prices, and even at low rates ruling the market, consignments abroad have been difficult to place. The overproduction of brimstone, together with the local speculations tending to a fall in prices and the abuse of credit in the marketing of this mineral, have caused much harm to this industry, at one time the most important and lucrative in the whole island.

The fruit trade, owing to American and Spanish competition, is also in a state of depression, as is the wine, oil, and sumac trade, in view of the war tariff between this country and France. A general decline in fact in all the chief articles of product has been felt in this district, leaving behind in many cases consequences of no little importance. Such an unsalutary state of things has now lasted for a period of about four years, during which it has steadily and gradually become more and more acute till it has reached the present crisis. In addition to the aforesaid economical drawbacks are also to be deplored the unsatisfactory state of agriculture and depression of European markets in general, which have caused in this district a good many large failures, giving rise to great alarm in some cases, and to a great lack of commercial confidence. Banking credit is now limited to a few of the mercantile houses of the district, towards which in all branches of trade a great distrust is observed. All these causes, added to the bad sanitary condition of the whole district, which was quite abnormal in the prevalence of cholera and small-pox, have no doubt contributed greatly to the prevalence of dull trade.

IMPORTS.

The most important import trade at Catania in the year 1888 was carried on with Russia in wheat, from which country some 20,000 tons were received. India comes next for about 7,000 tons. The general import returns herein annexed give the sum of \$3,511,930 in last year against \$4,536,870 in 1887, showing a decrease of \$1,024,940, which may be due to local causes as already stated. From the United States they amounted to \$126,415 against \$224,620 the previous year, showing a decrease of \$98,205, which is not much as compared with that of other countries, as shown by the following table of imports:

From—	1887.	1888.	Difference.
Great Britain.....	\$1,741,625	\$1,160,630	—\$580,995
France.....	798,610	479,795	—318,815
Germany.....	447,660	152,650	—295,010
Austria.....	579,245	300,820	—278,425
United States.....	224,620	126,415	—98,205
Other countries.....	745,110	1,291,620	+546,510
Total.....	4,536,870	3,511,930	—1,024,940

EXPORTS.

This trade as regards quantity shows a small increase when compared to the exports of the previous year, but as regards value there is a decline of \$1,255,970, which is the result of the low prices that have ruled the articles of export during the past year. With all that decline, however, the export trade with the United States has gradually increased for the last three years as follows: 1886, \$615,746; 1887, \$700,815; 1888, \$776,815. To the above amounts is to be added about \$100,000 of orange exports, which are bought in this province, by Messina merchants, annually, shipped in that port, and not declared in this consulate.

The following table will show the decrease and increase of exports to the several countries:

To—	1887.	1888.	Difference.
France	\$537, 085	\$420, 425	—\$106, 660
Austria	849, 280	767, 830	—81, 450
Great Britain	676, 230	630, 420	—45, 810
Other countries	2, 184, 425	1, 012, 010	—1, 172, 415
United States	700, 815	776, 815	+76, 000
Germany	303, 395	377, 700	+74, 305
Total	5, 241, 230	3, 985, 260

The chief products of exports from this city port to the United States are fruits, sumac, sundry seeds, and

BRIMSTONE.

This trade in Sicily has never reached such a point of depression and of dullness as at present; the disastrous condition of the money market, in this district especially, has materially contributed to ruin this very important branch of Sicilian industry, and unless some provision or some unforeseen revival in the trade takes place, its industry will no longer form the great resource of the country; for in addition to the mines already closed more will be put in the same category.

Curious enough, however, the demand for this article from foreign markets continues much the same as in former years, and in fact the port of Catania exported last year 3,644 tons more than the preceding year; therefore it is to be inferred that if there is reason of complaint for low prices, the cause is to be found on this side, and it may be attributed to great deficiency of capital in Sicily, both in working the mines and in regulating the market, which is entirely at the option of the very few speculators who can impose their terms on the hard-pressed for money producers.

It is the opinion of many that the trade in question is now open in Sicily to the enterprise of any capitalist desirous of large and profitable investments, which whilst reviving the brimstone industry, might at the same time derive therefrom essential advantages in the working of their capitals.

The following table will show the amount of brimstone exported from Catania since the establishment of the consulate in this port:

Year.	Italy.	England.	France.	United States.	Other countries.	Total.
	<i>Cantars.</i>	<i>Cantars.</i>	<i>Cantars.</i>	<i>Cantars.</i>	<i>Cantars.</i>	<i>Cantars.</i>

GREEN FRUITS.

The fruit trade is for Sicily the second one in importance after the brimstone.

This island, which once supplied nearly both continents with this product, is not what it used to be some twenty years ago. Owing to the American, Spanish, Greek, and Archipelago competition, the trade is now reduced to the lowest state of depression, causing losses and failures.

The Province of Catania is estimated to contain both in the lower and higher land some 1,741,120 lemon and orange trees, yielding an annual production of 467,000,000 of fruits, the former of which bear all the year around; the crops are called the fall, winter, spring, and summer's cuts. The lemons of the former cut are considered to be the best both for quality and keeping.

The shipping trade of said fruits begins in the month of September for Austria, Russia, and Germany, and the oranges about November, and when these markets are overstocked, then shipments are made for the United States.

Since Austria has abolished the duty on fruits it seems that shipments have gradually increased towards that country.

The lemon shipping trade with the United States generally commences about the month of November and continues until August, and the orange in the beginning of January, up to the middle of April.

Having a good deal of knowledge of this trade I may, in the interest of American importers, state some facts which I have seen since my occupancy of this office. It can not be denied that the oranges produced in the groves of Aderuó, Paternó, Agrá, Bronte, Scordia, Leonforte, Mineo, Raddusa, and Biancavilla, all at the foot of Mount Etna, in this province, and a few miles from this city, are far superior to any other grown in any part of this whole country of Sicily for taste and for keeping. In fact all the oranges shipped at Messina from the month of January of every year up to the end of the season are, with a few exceptions, from those places. The trouble is, however, that the majority of the producers pay very little attention in gathering, selecting, and packing the fruits in shipping order. When a steamer is expected in port and good returns are cabled from America you see them gather the fruits with haste, even with damp and wet weather, which is absolutely fatal to the fruit. It is not so, however, at Messina and Palermo, where shippers have very large packing-houses and where the fruits are properly selected and packed. After being so gathered and so badly packed, they are then brought to this city for sale, when shippers buy or commission agents advance money for parties in the States. No wonder that owing to the miserable condition they reach their destination in a rotting state, causing losses to both. To make matters worse the tramp steamers go all around the island in search of additional cargo, delaying twenty and thirty days before they sail for the port of destination. In this city there are but a few good fruit packing-houses, all others being unreliable.

Upon such facts I consider it a poor policy for American importers to advance money on fruits, and I would advise no one to do so, unless they could find an honest agent who would look after their interests, and to advance money only to fruit-growers, to competent packers, and to honest dealers. Therefore, considering the above-stated facts, and the large growing production in Florida and California with the facilities of the railroads in the States, I am inclined to believe that the orange trade will in the course of ten years fall considerably unless producers will change their minds and ship from this district the choicest fruits properly packed. The following table will show the difference of the fruit exporting trade to the United States from 1884:

Year.	Oranges.	Lemons.	Total.	Increase.	Decrease.
	<i>Boxes.</i>	<i>Boxes.</i>	<i>Boxes.</i>	<i>Boxes.</i>	<i>Boxes.</i>
1884	44, 833	128, 040	172, 873		
1885	85, 544	100, 240	185, 704	12, 911	
1886	59, 396	100, 032	159, 428		13, 445
1887	114, 686	159, 451	274, 137	101, 264	
1888	92, 606	97, 377	189, 983	17, 110	
Total	397, 065	585, 140	982, 205	131, 285	13, 415

WINE.

This product is also another of the most important one in the whole island, and especially in this district, where it is grown in very great abundance, although none is exported to the United States. This trade and culture which once gave work to many thousand laborers is now reduced to a deplorable condition, and unless something is done to revive it it will undoubtedly cause general calamity. This province, containing a very large area of many hectares of cultivated vine lands, yielding an annual production of 2,000,000 hectoliters wine, it is easy to imagine how serious the loss has been felt by the public in general, caused by the war tariff with the French. The producers, who had in France a good outlet for their wines, finding now that market entirely shut up, sell their large stock which has accumulated for two years at extraordinary low prices, which can not cover the expenses of their culture and industry.

FREIGHTS.

Freights kept pretty steady during the latter portion of the year, and since then improved as regards England, both for homeward and outward tonnage.

From Sicily to the United States an average of 9s. 6d. per ton has been quoted, and of 1s. 6d. for a box of fruit. Freights for the States generally improve during the spring and summer months

SHIPPING

at this port continues in a healthy general condition, and 3,977 vessels, representing a tonnage of 745,236 tons, entered this port, against 4,352 of the year 1857. Of these 3,544 were Italian and 238 British, an increase of 17 English vessels, with a tonnage of 17,300 more than last year.

The so-called lump or time charters have for the past year entailed serious losses to ship-owners in England, and have gone, it seems, out of use. A single owner incurred a loss of about \$18,000 in the earlier part of last year through one of the charters connected with this port. It seems that the lesson has proved effective to ship-owners at large.

Vessels entered at this port during the year were of all nationalities, except one of American colors. Only one entered on the 17th of last February, when on the foremast of the steam-ship *Progreso*, of New York, I saluted for the first time in this port the proud flag of the United States.

BANKING.

Owing to the failure of several large houses and to the unsatisfactory condition of every branch of industry and trade, the credit throughout the island is much shaken.

The "Banco Nazionale" and the "Banco di Sicilia," which are the largest banking institutions in this island, have greatly reduced the discount, and money circulation has become very difficult, exercising the most influence on general commercial life.

The smaller local popular savings banks, which although keeping the exchange at the high rate of 7 and 8 per cent., have been up to the present of great help to trade, are now in the most critical condition; for on one hand their credit has been considerably restricted, whilst on the other they are compelled to protest daily lots of drafts, which owing to the present crisis can not be paid. The consequences are felt by every class of people, merchants and working people, and every day old and honest firms suspend payment.

PUBLIC WORKS.

There is nothing worth mentioning in this branch, which continues much the same as stated in my report for 1857.

The Circum Etnæa railroad line will, within the next new year be put under construction and will be completed in two years' time.

THE NEW PORT.

This port is not yet completed and work is going on slowly, on account of the unfavorable financial condition of the city. The works to be erected in force of the plan were: A *molo* or breakwater of 1,250 meters; two piers thrown out at right-angles on either sides each 60 meters long and 15 wide; lastly, a quay or wharf, including a supplementary railway station of 525 meters and at a height of 5 meters above the level of the sea. Such works were to be accomplished in eight years.

The stone works at sea commenced in the month of February, 1874, but through some dispute with the contractor, they were for several months interrupted and resumed in the month of May, 1876. During the construction, however, it was thought proper that the original plan required some modifications at one increase estimated of 660,000 liras, which was duly sanctioned by the Italian Government; consequently the total outlay came up to 8,157,448 liras, or about \$1,575,000, of which amount 70 per cent. is borne by the municipality of Catania, 20 per cent. by the government and 10 per cent. by the province.

The works completed up to December, 1883, were: Natural stone blocks at the sea for the base of the breakwater, 556,463 meters; artificial blocks for the outside part of breakwater, 8,423 blocks, each of 10,050 meters; large artificial blocks, placed on the surface of the breakwater, 1,536 blocks, each one of 18,000 meters. The meters, together with others of minor importance, comprised an outlay of 5,467,300 liras.

The present area and accommodation compared with that of twenty years ago, is an increase of area of 67.33 hectares, consisting in this port.

In an average, some 5,516 vessels (including fishing trade) enter the port of Catania yearly, under an aggregate tonnage of 1,565,156 tons. These vessels are chiefly employed in the wine, fruit, and sulphur trade, to all parts of the world.

The old harbor, on the completion of the new one, will chiefly be used for purposes of the coasting trade. The accommodation it affords had become quite insufficient for the growing importance of the trade.

AMERICAN MACHINERY.

Agricultural machinery.—In the production of cereals and in order to compete with producers of other countries, some farmers, it seems, are beginning to understand that mechanical reaping machines are essential to agriculture. In fact, Mr. Charles Beck, mentioned in my last report, representing the McCormick Harvesting Machine Company of Chicago, Ill., has already introduced seven more of said machines in this province, and no doubt others will be introduced in this island in the course of time.

At the request of the Agrarian Committee of this city, Mr. Beck some time ago gave a trial with one of his machines, in presence of many farmers and agriculturists, who were surprised to see it working to perfection, for whilst reaping the harvest, it fastened the bundles, leaving them on one side.

Sewing-machines.—There are in this district and city several sewing-machines of different patents and styles, but the American machine is the leading one. The Singer Company have of late remodeled and embellished their well-located establishments on via Steacoro Etnea, and which have fitted out in a really American style. On the right side entrance of the store, the large square show window is amply filled with all the latest improved machines and the kind of all embroidery made on them attract the admiration of the passers-by.

The said machines are also sold in weekly and monthly payments as in the United States.

VITAL STATISTICS.

The official estimated population of Catania, up to the 31st of last December amounted to 107,165, with 53,833 males and 53,312 females. There were during the year 4,750 births of 2,376 boys and 2,374 girls, with 279 illegitimate. The number of deaths was 4,185, besides 216 still births, with 40 illegitimate.

The chief causes of death were as follows:

Small-pox, 869; typhus, 105; diphtheria, 178; marasmus, 128; apoplexy, 124; eclampsy, 215; croup, non-diphtheretic, 101; bronchitis, 187; pneumonia, 276; lung disease, 127; heart disease, 139; enteritis, 320; diseases of the month, 358; death rate per 1,000, 4.10; birth, 4.43 per 1,000 summary; deaths by contagious diseases, 1,430; constitutional diseases, 220; nervous diseases, 408; bronchial diseases, 747; blood diseases, 163; stomacic diseases, 892; all other diseases, 125; total, 4,185.

There were 855 contracts of marriage, of which 757 were between young people; 37 between bachelors and widows; 70 between widowers and young women; 31 between widowed persons. Said contracts were signed—255 by both parties, 184 by the bridegroom, 25 by the bride, and 381 by none. During the small-pox 12,579 people were vaccinated. There were also 41 twin births, and one triple; a poor woman gave birth to three living girls.

CULTIVATION.

It may be of some interest to farmers in the States raising cereals to read the following brief account of an experiment made by Mr. Charles Beck, an intelligent agriculturist in this district, in the line of cultivating wheat by artificial manure. It seems that cultivating with that compost yields a good deal of profit whenever the rules assigned to are properly performed.

The rules would be the following: (1) Good plowing; (2) sowing in straight line; (3) manuring in base of phosphate.

The experiment was practiced on Mr. Beck's farm on three equal hectares of land prepared with the ordinary old-style plow used in this island; the sowing was done by his machine about the end of December, 1887.

To the first hectare no manure was given; to the second, 1,200 pounds of phosphate of calcium and 600 pounds of nitrate of soda was mixed; to the third only 1,200 pounds of phosphate was administered. The vegetation turned out good on hectare first; it was better on hectare third, and it was a success on the second, whereto nitrate had been mixed with phosphate. The plants sprouted out splendidly, and on the second hectare every bushel of wheat contained 15 and 20 stalks; but the wheat to which nitrate had been mixed improved very much.

The crop was retarded by a bad season, notwithstanding the following results were obtained, viz: Hectare first, with no manure, gave 37 bushels wheat; hectare second, with nitrate and phosphate, 77 bushels; and hectare third, with phosphate alone, yielded 90 bushels. It is, however, to be observed that the first hectare gave very little hay; the third an ordinary quantity, and the second produced too much of it. The quantity of wheat produced by hectare third is an evidence that cultivating cereals with that process is the most profitable one, from the fact that mixing nitrate to phosphate, although it produced much hay, it decreased the production of grain. Several farmers are now practising this method with the hope of increasing their wheat crops:

AGRICULTURE.

The Province of Catania, extending over 60 miles of the eastern coast of the island, and including the shipping towns of Acireale and Pelicciolo, is essentially agricultural, whilst its chief city, Catania, with a population of 107,000 inhabitants, is the residence of a large number of landlords, deriving their revenues from the slopes of Etna to the north and from the fertile lowlands, stretching to the south and west watered by the river Simeto. At one time it was said, to produce one-sixth of the whole quantity of wheat grown in the island, in addition to rice, cotton, silk, and numerous other products.

In the year 1865 at the time of high prices ruling in cotton, caused by the civil war in the United States, no less than 58,000 hundred weight of cotton, of the value of little short of \$2,500,000, were shipped from Catania to Marseilles and Genoa, as shown by the statistics relating to its exports and imports.

Catania is the seat of considerable commercial activity, but the great fall in prices of all Sicilian products have within late years checked the natural growth of agricultural enterprise, which industry may be said to lay in a dormant state, and this province, once famous in other times for its corn-growing production, at the present time, owing to the completion of the eastern states of Europe, the cultivation of wheat has gradually diminished every year and the corn fields have been turned into vineyards. What advantages landlords may have derived from such change it is difficult to ascertain, whereas it has been such that wheat forms now an article of importation into the country, when in the good old times it used to be exported instead to continental Italy and to the north of Europe, at very remunerative returns to the producers. On the other hand we see that vine, which has replaced corn-growing, is yielding very badly, and the result of such a transfer of agricultural products has brought about a general depression in the industry of both of these branches of trade. Such being the general features of the State of agriculture in this district, it offers very little material to investigate, and as it was stated in my last report for 1887 concerning this district it may well be said that agriculture here is what it was some fifty years ago, and those improvements introduced by modern science for the cultivation of the soil are very little known in this section of the country.

Last year's general harvest was a very bad one; a long succession of drought prevented the due development of vegetation, and in consequence the crops were of inferior quality and the yield very poor.

The province of Catania has an area of 31,739 hectares in olive cultivated land, yielding an annual production of 233,415 hectoliters of oil, with 1,741,120 orange and lemon trees, producing 467,000,000 fruits, and about 2,000,000 hectoliters of wine, besides beans, rice, corn, seeds, filberts, almonds, cotton, sumac, walnuts, and other products of less importance. These articles are almost all exported for foreign consumption with the exception of a small portion of them sold for home wants.

To exhibit the depression of agricultural industry in this district, the following comparative table of prices for the years 1887 and 1888, will show its real and lamentable decline:

Articles.	Average price.		Free on board—
	1887.	1888.	
Olive oils	<i>Liras.</i> 87 to 90	<i>Liras.</i> 58 to 65	Per 100 kilograms.
Wheat	25 to 36	23 to 24	Do.
Lemons	8 to 12	8 to 6	Per 1,000 fruits.
Wine	30 to 37	15 to 20	Per hectoliter (26½ gallons).

And so likewise all other products of minor importance have lost ground in the market price. As regards the quantity output by the cultivation of the soil in all kind of products in the district, it is not possible to return them, as no records of the sort are obtainable.

VINCENT LAMANTIA,
Consul.

INDUSTRIES OF CATANIA.

REPORT BY CONSUL LAMANTIA.

CREAM OF TARTAR.

Industry at Catania has made some progress during the last few years in several branches of trade—cream of tartar, for instance, which at times was imported, is now made in several communes of this consular district, showing a good progress.

LICORICE.

Licorice is manufactured in the towns of Catania, Caltagirone, and Termini in the Province of Palermo. The root, which is of a yellowish color, has a strong sweet taste, is found growing on the banks and dry beds of rivers. It grows best in sandy, stony soil, and it is dug by spade, principally in the month of November, when it contains more juice, and the earth is softened by the first rains. The method for preparing licorice for trade is the simplest possible. The root is first cleaned of every impurity by continual washing in pure water, and after it has been crushed, the juice is pressed out and boiled until reduced to a paste, when it is worked out in small cylinders of not more than two inches and shipped for Trieste, Leghorn, Genoa, Marseilles, England, etc., where it is preferred to that coming from the eastern countries.

HATS.

Another prosperous industry in this district is hat manufacturing. There are in Catania six hat makers who employ about fifty persons and produce felt and side hats of the best quality.

WINE.

But the best progress is shown by the wine industry, which in this consular district is of the greatest importance. One large manufactory in Adernó is furnished with engines, instruments, and utensils, of the best pattern. The yearly produce is about 15,000 gallons of Nero or Black Etna table wine, beside cognac and champagne. Another manufactory, in Riposto, is well known on the market for the qualities of champagne, muscato, and other fine sparkling wines.

STEAM-MILLS.

The province of Catania has not less than 21 steam-mills and 293 mills worked by hydraulic power. Of the 21 steam-mills, four are in this city. I must, however, call particular attention to the one just opened in Licata by Messrs. Matteo Verderame & Sons, being provided with the most powerful engine on this island. The same occupies an area of about 15,000 square yards, and is provided with two 200 high-pressure boilers of the Babcock system, a Wheelock engine (all of the latest improvements,) for cleaning, washing, and grinding the corn and sifting flour, are to be found there. Two separate branches of these works are reserved for the macaroni industry and sulphur grinding.

BRIMSTONE.

By the continual going down of the brimstone prices, the most important branch of industry is now going through a crisis. The sulphur millers and refiners are now compelled to be very cautious in their purchases. They reduce their work to those months when their produce is used and they buy only as much of raw materials as they can simultaneously work out and sell. The activity of the "*Società Italiana degli Zolfi*," which has the most important works of the district for this kind of sulphur industry, does not show a great decline. The said society disposes of efficient means to produce, in a relatively short time, a good quantity of work; and the following items will show the production of last year:

	Tons.
Refined brimstone	10,000
Sublimate of sulphur	2,000
Refined sulphur in leaves	700
Ground brimstone	13,000
Total	25,700

Second to this company come the works belonging to Pietro Marano and Messrs. Alonzo & Consoli, which are provided with four furnaces for refining, four apparatuses for sublimating, and three mills for grinding, worked by a 20 horse-power steam-engine. The same employ about one hundred persons, and give a daily production of 31 tons of refined brimstone and 100 tons of ground brimstone. Another mill belonging to the same firms is worked by a 10 horse-power engine, and can give only 60 tons of ground brimstone. Up to this day this branch of industry has been the monopoly of a few Catanese houses, and the rubbish shipped as ground brimstone has been anything but sulphur. This fact already known on every market, I would advise the merchants of the United States either to import brimstone in bulk and grind it at home, or before giving an order to submit the samples coming from Catania to an exact chemical analysis or test.

ASPHALT.

The house of H. A. B. Aveline has introduced since a new branch of industry, namely, it has opened a manufactory for grinding and manipulating asphalt, which is exported to Italy and other countries.

CEMENT.

The cement and Portland industry is new.

In the works of Mr. Roarsi are made bricks of several colors, size, and shape for floor covering, water-pipes, bass-relieves, wall-pillars, mosaic, and other such works required for embellishments.

BRASS WORKS.

In the workshop of Mr. G. B. Borgetti, brass and cast-iron are executed, and mechanical instruments, agricultural machinery are repaired.

The *Società Italiana dei Lavori Pubblici*, which is building this harbor, has also workshops for repairing tug-boats and engines, and machinery required for the work they are executing.

FURNITURE.

This branch of industry, I must say, has reached the highest degree; cabinet works and furniture, as regards artistical taste, fine finish, and solidity, can compete favorably with those of any country. The numerous class of cabinet makers have just associated themselves into a co-operative company with the view of supplying furniture of any kind at moderate prices and exclude from the market foreign produce. They have also opened, in the central portion of this city, a show-magazine, where is to be found a good stock of the finest and richest pieces of furniture.

SILK.

The Province of Catania, once rich in mulberry trees, had a prosperous silk industry, whose produce was in great demand in Sicily and all over the late kingdom of Naples. The present decline is due to the decline in silk-worm breeding, which caused the mulberry trees to be totally supplanted by the more profitable cultivation of orange and lemon trees. But this industry would prove more profitable, at least

for the country people and farmers, should it be again developed. This city once possessed not less than 15,000 looms, which required the handwork of 20,000 persons. Beside that there was also a tribunal called the "Silk Consular Body," to whose judgment were subject men and matters connected with the silk industry, and which examined the quality of the silk stuffs made, and decided on all the matters and differences between workmen and principals. Now there are only three factories in which silk is twisted.

The splendid establishments, supplied with the best inventions of science, are now idle. The industry is restricted to a few who work privately at home on small looms and give very scanty productions.

COTTON TEXTURE.

The cotton texture, which was at one time as prosperous as the silk industry and employed 700 looms and 10,000 persons, has now disappeared and is reduced to the productions of a few farm women who work on hand looms as much as will supply the requirements of their families in cotton, woolen, and linen clothes.

ALCOHOL.

Owing to the new duty imposed by the Italian Government on alcohol, and the vexing system of collecting the same, and the competition of foreign rubbish coming under the name of alcohol, the distilleries of this district find working to be no more profitable. A committee sent out by the Government to inquire and report on the causes of the present sad state of agriculture pointed out that this new law on alcohol has caused the decay and nearly the total disappearance of this industry, which has been so beneficial, especially for the wine-growers and industrials who could utilize for distilling purposes the spoiled wines, dregs of pressed grapes, and other such rests, whilst now the same are of no use to them and represent a total loss.

AGROCOTTO.

There was need of finding an outlet for those lemons, which not being in sound state for long voyages and not fit for trade, has lead to the device of squeezing out the juice, which is exported either crude or concentrated. Messrs. Cucinotta Brothers have a factory working on this peculiar line of industry, and up to the last day of April give work to seventy men. There are several firms in Catania working on this same industry, and give work to about two hundred persons.

GAS WORKS.

The gas-works of Catania employ not less than sixty workmen, and are provided with a steam-engine and supply the illumination of many lights in the entire city, which is the richest in the island. The electric light and telephone, introduced in workshops, offices, clubs, etc., have met with great favor and are steadily increasing in number.

MATCHES.

The house of Elia & Co. has a manufactory of wax and wooden matches. The work is made by seventy men, and the production of about 10,000 boxes daily is of good quality and stands well the competition of any other fabric in Italy.

TANNERIES.

The dressing of skins and tanning of hides in this province has been exercised for a number of years, and especially in Catania, where it has been a very old industry.

There are now six tan-houses in this city, worked by the use of water, employing in all three hundred men. But the one owned by Mr. Mario Buscemi is worked by a six horse-power steam-motor, and it is considered the most important one in the province. It has fifty-six reservoirs, or tubs, employs thirty-six workmen, and the material used for tanning is nut-gall, bark of oak, holm-oak, and sumac. They work only eight months in the year, and the leather is sold in the island.

SUNDRIES.

Beside those mentioned there are in the city various soap, ice, confectionery, cordage, glove, shooting powder, seltzer water, and beer manufactories, with several furnaces making lime, building and paving bricks, chalk, tiles, and common earthen ware.

There are also several mills for the grinding of nut-gall tree, sumac, and holm-oak bark. Catania has other industries conducted with skill and in a praiseworthy manner.

The objects of amber, artificial flowers, gold embroideries, etc., are admirably executed, and prove the fine taste of this population.

CONCLUSION.

In a word, in the line of industry the city of "Bella Catania" has, under the regime of United Italy, made some good progress.

VINCENT LAMANTIA,
Consul.

UNITED STATES CONSULATE,
Catania, Italy, October 10, 1888.

FLORENCE.

REPORT BY CONSUL DILLER.

By executive order, which went into effect July 1, 1888, this consular district was made to embrace the provinces of Florence, Arezzo, Bologna, Ferrara, Forti, Modena, Ravenna, and Reggio, containing a population of 2,758,907 souls, or about one-tenth of the entire population of the Kingdom of Italy, thus forming a compact and homogeneous district in the center of the Kingdom and embracing the most industrious and fertile portion. (See Table No. 1.)

AGRICULTURE.

The labors of the farming community have generally proved satisfactory. The product of the wine harvest in quantity was greater than that of last year, but in quality it was much inferior, owing, doubtless, to the exceptionally cool summer.

The crop of olives just gathered appear abundant, the nut, however, being abnormally large. The product of oil is less than that of the previous year.

Wheat, Indian corn, hay, hemp, flax, chestnuts, and other growing crops, were about on an average. Apples, pears, peaches, apricots, plums, figs, pomegranates, cherries, strawberries, and other small fruits, were plentiful and cheap, conducing greatly to the health and comfort of the people. I can not, however, leave this portion of the subject without having a word to say in opposition of the wholesale destruction of the small insectivorous birds. The little innocents are snared by thousands and almost daily hawked about the streets for sale. No bird, however small, escapes the meshes of the fatal net, and the few *soldi* secured for them but ill repays the peasant-farmer for the loss he sustains in blemished and imperfect fruit, ravaged by insects overrunning vines and fruit-trees in the absence of these insect destroyers. Of the fruits shipped from this district, less than one-half the entire crop is represented as merchantable; the remainder, being imperfect, is sold at a reduced price and utilized at home.

MANUFACTURED TISSUES.

Another new industry has been inaugurated by a German company, at Prato, near this city, for the manufacture of Tibet tissues and embroidered shawls. They have purchased 30,000 square meters of ground, and will employ about 1,000 workers of both sexes.

At the same place (Prato) a standard school for instruction in weaving and dyeing has recently been opened under the auspices of the Italian Government, which promises excellent results.

NEW RAILWAY, FLORENCE TO FAENZA.

This line, at present under construction and contracted to be finished in 1891, will be 35½ miles in length, the estimated cost of which will be more than \$5,000,000. When finished, it opens up rapid communication between Florence and the Adriatic, and will prove of immense commercial importance to this city. The contract for construction divides the line into four parts. The portion from Fagnarie to Marradi, 10½ miles, and that from Vaglia to Florence, 12½ miles, are both well advanced. The

latter will probably be in operation by September next. On the entire line there will be 9 tunnels—the whole measuring 7,100 yards—the longest, near Pratolino, will be 3,800 yards, and the shortest, at Cargola, 55 yards in length. The estimated cost of the long tunnel at Pratolino is \$823,472. In addition to the tunnels there will be 9 iron bridges and 9 built of stone with brick arches. The immense cost of this short line of road is owing to the mountainous character of the country traversed, and the frequent crossing of mountain streams and rivers.

The Adriatic Railway Company are about introducing Pullman cars on their line, and have contracted with that company for the furnishing of materials for building two cars to be finished in the workshop of the railway in Florence. With the exception of French mirrors (which are to be etched in the United States), everything connected with their manufacture will be of American production.

TRAMWAYS.

The principal lines of tramway, both by steam and horse power in this city, are controlled by a Belgian company, and are as follows: Steam Florence to Prato, 12 miles; steam, Florence to Poggio, via Caiagno, 10½ miles; steam, Florence to Signo, 8 miles; making 30½ miles in length, and employing 18 engines and 49 cars. Horse-power, Florence to Varlungo, 1½ miles; horse power, Florence to Bagna, via Ripoti, 3½ miles; horse-power, Florence to Sesto, 5½ miles; horse-power, Florence to Belt-road, 3½ miles; making 13½ miles in length and employing 190 horses and 73 cars. There is also a line to the Caicina or City Park, two miles in length, propelled by both steam and horse-power. I have not been able to procure the number of employes or the amount of their per diem allowance. The same company will soon open another steam line, 3½ miles in length from this city to Settignano, a thriving and important manufacturing town of about 5,000 inhabitants.

An Italian company control the steam tramway to Fiesole, about 3 miles, and intend during the present year to establish a line of similar cars from Florence to the beautiful valley of Chianti, about 15 miles in length, with numerous stations at various interesting points. The necessary authority having been already secured, work will be commenced almost immediately.

THE BOLOGNA EXPOSITION.

I regret that I have not been furnished with a detailed report of the exposition at Bologna, which commenced on May 1 and closed in October, 1888. The consular agent reports "that economically speaking it was a failure, concerning industries and agriculture nothing very important, but musically speaking it was very interesting, especially for the autographs of the greatest artists and composers, living and dead, which were sent from every part of the world." The names and address of citizens of the United States who received awards or honorable mention, are:

W. Kimball & Co., of Chicago, bronze medal, for modern musical instruments.

Professor Julius Leibling, of Chicago, honorable mention for practical music.

MISCELLANEOUS.

I respectfully submit the accompanying tables referring to the following subjects:
Population of Florence.—At the close of the fiscal year ended June 30, 1888, the population of this city amounted to 176,804, as against 175,326 for the preceding year, showing an increase of 1,578. This increase is due mainly to a decrease of the number of deaths, as compared with the previous year, in which there appeared 5,038 deaths and but 4,786 births. The year ended June 30, 1888, shows a very slight difference between the death and birth rate. The number of marriages for the same period show an increase.

Municipal customs duties of the city of Florence show an increase of \$21,832.49 over those of the preceding year on the necessities of life. There are at present eight gates where these dues are collected, and a ninth will be added this year in the neighborhood of Bellesguando, where many English and Americans reside.

Visitors to galleries and museums show an increase of nearly 30,000 over the number of the previous year. American artists are admitted free upon presentation of a consular certificate, and are entitled to all the privileges of sketching, studying, or copying granted to native or other foreign artists. The number of certificates furnished gratis by this consulate during the year was fifty-nine.

Loan institutions.—It is gratifying to state that the business of the pawnbrokers establishments has decreased during the last year, showing an improvement in the condition of the poorer classes, and more constant employment.

Sanitary institutions, hospitals, etc.—The reports from all the public hospitals in Florence for the year ending June 30, 1888, show a decrease of seventy-four patients and thirty-four deaths as reported for the previous year. The average cost per diem for patients at the large hospital of Santa Maria Nuovo, which embraces S. Bonifazio, S. Lucia, the lying-in asylum and the syphilitic department, is 42 cents each, while at S. Giovanni di Div, exclusively for males, it is 45 cents. By royal decree, issued March 28, 1888, the syphilitic departments have been abolished in connection with the public hospitals, and a dispensary for such diseases established in this city, on October 1, 1888.

It is no doubt true that the death-rate in proportion to population is high, but much of this occurs with very young children, and the reason for it is easily accounted for. In my last report I called attention to these causes, and were the facts published the effect would be to allay instead of magnifying the fears of the travelling public, when comparing the apparent death-rate of this with other Italian cities. Too much publicity can not be given to the fact that Florence is not a desirable winter residence for persons suffering from bronchial or lung diseases during the months of December, January, and February, especially. This is the result of my personal observations and inquiry, the official figures not being available. Upon the various other subjects connected with the institutions, trade, and commerce, and other matters of interest of the city and the provinces embraced in this consular district, the annexed tables will contain full and detailed information.

ISAAC R. DILLER,
Consul.

GENOA.

REPORT BY CONSUL FLETCHER.

CUSTOMS RECEIPTS.

The following statement appears in the official report of the Genoese chamber of commerce for 1887:

The duties collected at the custom-house in Genoa during the year 1887 amounted to 99,027,110 lire (\$19,112,232); during the same period the different custom-houses of the Kingdom collected a total of 170,136,898 lire (\$32,636,421). In other words, Genoa collected a little more than one-half as much revenue as all other custom-houses in Italy combined. There is a discrepancy between the above figures and those appearing in the table of imports into Genoa, which follows, yet all are copied correctly from the official report of the Chamber of Commerce.

Any incongruities which may be noticed in the other tables accompanying this report are due to a similar cause.

JAMES FLETCHER,
Consul.

UNITED STATES CONSULATE,
Genoa, Italy, December 27, 1888.

Imports at Genoa, Italy, for the year ending December 31, 1887.

JAMES FLETCHER,
Consul.

UNITED STATES CONSULATE,
Genoa, December 31, 1887.

LEGHORN.

REPORT BY CONSUL SARTORI.

I have the honor to submit to the Department my annual report on the trade and commerce of the port of Leghorn for the year ending December 31, 1887. The chamber of commerce of Leghorn does not publish the annual returns until late in the following year, so the most recent returns available of the general trade of the port are those of the year 1887.

Petroleum shows a decrease in quantity of 21,100 gallons, and an increase in value of \$25,148.08 as compared with the year 1887. The duties on this article are unchanged, viz, about 35 cents per gallon, besides which there is an octroi tax of 4 cents per gallon. The market price here, duty paid, is about \$4.55 per case of say 10 gallons. At the close of the year 1888 there were only 1,500 cases in store here.

The municipality of Leghorn has recently granted to Messrs. Nobel Brothers, of Batoum and St. Petersburg, the privilege of making a tank on a quay in this port for the deposit of Russian petroleum. The space granted comprises about 2,255 meters, and the annual rent is 4,500 francs. They have already commenced the construction of their works, which will probably be completed by the summer, and they propose to bring their petroleum here in bulk and to make on their premises the cases and cans, having already ordered the machinery necessary for the purpose in the United States. I understand that similar works have already been constructed at other Italian sea-ports. The municipality in granting the above privilege reserved the right to grant similar requests to other companies, and it might be well for our exporters to adopt the same course. At all events it would be wise for them to give this their attention. At present the superiority of our refined petroleum is universally conceded, but the difference in price may enable the Russians to obtain a footing here from which it may prove difficult to dislodge them. Besides this there is a great deal of mixing the oils being done here which should be looked into.

The annual exports from this port to the United States are forwarded at the end of each fiscal year, in compliance with the new consular regulations, Form No. 20.

NAVIGATION.

During the year 26 steamers and 13 sailing vessels cleared from this port for the United States, as follows: Steamers, with general cargo, 23 for New York, 1 for New York and Boston, and 1 for Boston. One in ballast for New York.

Sailing vessels (general cargo): 12 for New York and 1 for Philadelphia.

During the same year, 29 steamers cleared from Rio Marina, Elba, with iron ore, viz, 14 for Philadelphia, 13 for Perth Amboy and 2 for Baltimore.

DECREASE IN MARBLE EXPORTS.

Mr. Boccacci, the consular agent at Carrara, reports that the expiration of the commercial treaty between France and Italy, which took place on March 1, 1888, and the scarcity of vessels to load for the United States and consequent high rates of freight, have caused a decrease in the exportations from that district of 40,162 tons of marble as compared with the year 1887. During the year 1888, 156,929 tons of marble were produced in the districts of Carrara and Massa, an increase of 2,737 tons over the previous year.

WEATHER.

The weather throughout Italy during the past year was very favorable for all kinds of crops, particularly grapes and olives, of which the yield has been much above the average, and lower prices should be looked for.

TRADE.

The conditions of trade here remain the same. Most of the purchases made by our merchants are made through commission houses (of which there are a large number here) by means of open letters of credit, the consular invoice and bills of lading serving as a basis for the draft. During the past year there were several heavy failures among the bankers here, and credit was a good deal shaken. With the exception of petroleum, grain, and tobacco such of our manufactures or merchandise as find their way into this market, filter in through France, England, and Germany. As I have called attention in my previous reports, I believe there is a market here for American goods, but to effect business agents with samples must be sent out.

ELBA IRON MINES.

The contract for the iron ore of the mines at Elba expired on June 30, 1888, and was renewed by the Government for two years from July 1, 1888. The output is limited to 180,000 tons per annum, of which only one-half can be exported, the other being reserved for consumption in the Kingdom of Italy.

POPULATION OF LEGHORN.

On December 31, 1888, the population of the city of Leghorn was estimated at 102,693 inhabitants. There were 2,237 deaths during the year (1,112 males and 1,125 females) and 2,784 births (1,439 males and 1,345 females). There were 835 marriages.

EMIGRATION.

The emigration, principally temporary, amounted to 2,171 (1,114 males and 1,057 females), and the immigration 2,799 (of which 1,414 were males and 1,385 females).

VICTOR A. SARTORI,
Consul.

UNITED STATES CONSULATE,
Leghorn, Italy, March 26, 1889.

PHILIP CARROLL,

*Consul.*UNITED STATES CONSULATE,
Palermo, July, 1899.

THE NETHERLANDS.

AMSTERDAM.

REPORT BY CONSUL ECKSTEIN, FOR THE YEAR 1888.

PETROLEUM.

The trade of this country in this important article of commerce is mentioned as having resulted rather favorably to those therein engaged, during the year 1888, though the imports show a slight decrease.

The reasons therefore assigned are, in the first place, the ill experiences of certain importers and speculators in former years, which, by the somewhat high prices oil commanded, dampened their spirit of enterprise, and further, the new method of importing the oil in tank-steamers created a certain uncertainty and made old importers of barrel-oil (Fassoel) somewhat apprehensive to continue the barrel business with sailing vessels.

It is now held that the experiences of the past year have removed this doubt, and show that both systems can very well exist and prosper side by side.

The above observations apply more particularly to the year's operations at Rotterdam, as the imports at Amsterdam in 1888 have not fallen off as compared to what they were in 1887, but amounted to over 50,000 barrels less than in 1886.

The whole imports at Rotterdam, Amsterdam, and Flushing came up to about 731,000 barrels in 1888, against about 790,000 barrels in 1887.

The foregoing figures do not include the imports of Russian petroleum at Amsterdam; they amounted to about 30,000 barrels in 1887, and to about 60,000 barrels in 1888.

The business here in the American product does not seem to have been sensibly injured by the increasing competition and larger imports from Russia.

From a statement before me I copy that the imports of American petroleum at Amsterdam were in 1888, 263,000 barrels and the deliveries 249,350 barrels, as against 260,000 barrels imported and 238,000 barrels delivered in 1887.

The Russian article brought here has been, almost exclusively, re-exported to Germany, the American being altogether preferred for domestic consumption.

At the same time it is held that producers and exporters in the United States require to be closely guarding their interests, if they desire and intend to retain the supplying of the Amsterdam market to the same extent as hitherto, which it is thought can best be done by taking care that the difference in the price for which their product and that of the Russian generally sells be constantly kept down to the lowest possible figures.

The Russian competition is not only to be maintained, but will prove even more keen this year than it has so far.

In addition to the Messrs. Nobel Brothers, there is now, and has been since the commencement of 1889, still another corporation bringing Russian oil into this market.

This refers to the Société Belge et Hollandaise, with which the Rothschilds are connected.

This organization or company has started, and intends to continue, business here by importing petroleum in tank-steamers, and transferring it at once into barrels; for which purpose it effected temporary arrangements, which are calculated to be extended as time permits and business prospects shall justify.

The inland or domestic consumption is estimated to have amounted to about 600,000 barrels for each of the last two years, 1887 and 1888.

EMIGRATION.

It seems a peculiar coincidence that there was so little difference in the emigration, via the port of Amsterdam to the United States, during the last two years, consisting, as it did, of 8,057 persons in 1887, and of 8,117 persons in 1888, or 60 more in the latter than in the former year.

These figures stand for the total emigration, and include persons of both sexes, all ages, and nationalities.

The principal countries which, in 1888, contributed to this emigration, or of which the emigrants proved to be natives, and how many of each country, the following statement will show:

Netherlands	2,136	Sweden	116
Germany	1,903	Hungary	151
England	678	Belgium	85
Norway	717	France	45
Italy	683	Switzerland	46
Austria	602	Denmark	31
Russia	526	Other countries	102
Poland	294		

Of the emigrants from the Netherlands by far the greater contingent went, as is usually the case, from the Provinces of Groningen, North Holland, Friesland, and Zealand. So long as any foreign immigration to our country remains desirable emigrants from Holland, taken in the aggregate, may well be welcome, and still more so, if possible, the mass of those who come to us from those parts of the country above named.

Considerably over one-half of the entire emigration from this port in 1888 took place during the four months of March, April, May, and June.

Alphabetical list of the trades or occupations of the emigrants who embarked at Amsterdam for the United States during the years 1884, 1885, 1886, 1887, and 1888.

Total emigration.....	4,612	2,842	4,647	8,057	8,117

* From one to ten years.

† Under one year.

It appears to deserve mention that the Argentine Republic invites and substantially assists emigration to that country.

A gentleman here, a competent authority on the subject, has kindly favored me with the data, from which I prepare the following statements, relating to the details of which the assistance consists, and the terms upon which it is extended.

The Government, through the National Bank of Buenos Ayres, advances the passage money.

It is paid by the bank to the different steam-ship companies carrying the emigrants, who get no part of it, or any money in hand paid.

The amount paid for passage from here or Rotterdam to Buenos Ayres is about 84 florins for adults, 42 florins for children from three to ten years old; children under the age of three years are taken free of charge.

The conditions upon which the passage money is advanced are stated to be: *a*, repayment of the same by the emigrants to the Government within two and a half years; with *b*, interest on the amounts at the rate of 8 per cent. per annum.

If the debt is liquidated within the time above specified, then the emigrant attains the right to ask and receive from the bank an advance or loan of a certain amount as working capital, for the purpose of settling down in some little business (*zaakje*) of his own.

The privilege of participation in the above-stated offers and arrangements do not extend to or include unmarried persons.

The largest families are preferred; but the age of the head of any family must be under sixty years.

Farmers are principally wanted; but masons, carpenters, and navies are also accepted.

On arrival at Buenos Ayres the emigrants are lodged and boarded for the first five days at the expense of the Government; in the meantime a bureau of labor supply will endeavor to find work for them.

The Hollanders availing themselves of the proffered chance of going to the Argentine Republic embark almost exclusively from Amsterdam and Rotterdam in the steam-ships of the Netherland American Steam Navigation Company.

The steamer *Zaandam* opened the traffic, by this just-established new line, in sailing from this port, for Buenos Ayres, on the 5th of last month, to be followed by a departure each month.

The *Zaandam* carried away about four hundred and eleven emigrants, of which number over three hundred were Hollanders.

The opportunity to emigrate on the terms above described is so eagerly seized by natives of this country and others, and by the classes of people wanted, that the steamers up to August next have already as many emigrants on their lists as they can carry.

Under these circumstances it would appear that it may safely be assumed the emigration of Hollanders to the United States will, in the course of the present year, be very much less than in 1887 and 1888.

COFFEE TRADE.

Respecting the rather important transactions in the article of coffee in the markets of the Netherlands, I submit several statistical tabular statements, containing interesting and comparative information as to the imports, sales, and deliveries, stock on hand and ruling prices, covering each of the years from 1878 to 1888, both inclusive, as follows:

In my annual report on same subject for 1887 I spoke of initiatory steps having been taken, both at Amsterdam and Rotterdam, for the purpose of creating in both places time markets with clearing houses (*Termin-Märkte mit Liquidationskassen*).

I have now to state that such institutions have been established, and that they began operations on the 1st of May last.

The volume of their transactions in respect of Java and Santos coffee aggregated at Amsterdam 742,250 bags, and at Rotterdam 1,177,500 bags from May 1 to December 31, 1888.

Largest business on any one day—at Amsterdam on December 5, 23,000 bags; at Rotterdam on same day, 30,500 bags were dealt in.

I made special inquiries into what is the probability or prospect for the further extension and progress of the purely speculative dealings, or term-business, in this country, and from the very best information obtainable upon this point I am only enabled to state that the feeling upon the subject among the merchant classes is divided. While some favor the transactions in question, others look upon them with distrust and disfavor them.

It may, however, be said that a very general opinion prevails that, under existing circumstances, a large business, as is desired to be done here in the article, can not nowadays, be transacted without a term market.

It seems, therefore, held to be likely that the "term business" here will remain or become a permanent institution, and that its operations will increase and prosper.

Exports to the United States.—During the past two and a half years, or since about July 1, 1886, purchases of coffee for or on American account, fell off considerably. The

rise in the prices of the article dates back to the same period of time, and it would seem to have caused certain conditions rendering the markets of this country less favorable or advantageous for drawing supplies from for trade purposes or consumption in the United States.

The shipments to our ports, nearly all to New York, from the consular district of Amsterdam, amounted, in value—to \$632,570, in 1885; \$835,350, in 1886; \$302,832, in 1887; and \$516,421, in 1888.

Crops.—The crop of Java coffee of 1887-'88 it stated to have amounted to 256,200 piculs for the Government and 172,500 piculs for private parties, or together 428,700 piculs, against 1,143,000 in 1886-'87; 719,000 piculs in 1885-'86, and 1,316,000 piculs in 1884-'85.

The present crop's estimate is placed at 564,500 piculs for the Government and 300,000 piculs for private parties, or together at 864,500 piculs.

The prospects for a good or better Java crop seemed favorable in the beginning, but later on complaints were heard about the season being too dry.

MANUFACTURE AND EXPORT OF CANDLES.

The production of stearine candles forms one of the chief manufacturing interests of Holland; there being three large factories in the country, which are situated at Amsterdam, Gonda, and Schiedam.

The raw material worked up by them annually amounts, roughly estimated, to about 14,000,000 to 16,000,000 of kilograms, and consists of about 60 per cent. palm oil, imported from the west coast of Africa, and about 40 per cent. of tallow, which comes here from Australia, Buenos Ayres, and to some, but not a large, extent from the United States.

The output of the factories is described to me to consist of about 61 per cent. stearine and stearine candles, 25 per cent. oleine, 6 per cent. glycerine, and of 4 per cent. pitch.

The exports of stearine and stearine candles take place to nearly all parts of the world, and, in the aggregate to a very considerable extent; but, up to the present, shipments to the United States have been unimportant.

Oleine finds a market in Europe, where it is turned to account in woolen mills and by certain silk manufacturers.

The glycerine produced finds its way into the hands of refiners of the article in Germany, Holland, Belgium, France and, to some extent, in the United States.

The trade in candles, local consumption and export, though figures representing it for 1888, are, so far, entirely wanting or unavailable is nevertheless ascertained to have been greatly in excess of that of the preceding year, 1887.

This is said to be a noteworthy circumstance, in the face of the fact of the ever-increasing competition through gas and electric light, on one side, and, on the other, by the German and English paraffine candles.

In 1887 according to the official trade statistics, the exports of wax, spermaceti, and composite candles are set down as having amounted to 8,104,920 kilograms in quantity and to the same number of florins in value.

Over three-fourths of this foreign trade was, and usually is, with Belgium, England, and Hamburg, Germany, but small shipments are recorded to a great many countries in nearly every part of the world.

In gathering data for preparing this paragraph I met again with most striking proof of how very imperfect, I may say, of how confusing and misleading are all official commercial statistics as published in this country.

Stearine candles are the only kind of candles produced and exported, as I am most credibly informed, whereas the official returns of the exports from Holland, speak of wax stearine spermaceti and composite candles.

Again, the value of the article figures in the statistics of exports at an estimate quite out of proportion, about double what it ought to be. The 100 kilograms are valued at 100 florins, whereas the actual value of such quantity is, at present, hardly over one-half that amount.

This latter-mentioned and great defect and difference arises from the fact that there exists here a system of arriving at the value of the imports and exports according to a standard or maatstaf which was adopted many years ago and which is allowed always to remain the same, is never changed, no matter how much any article has since, or is from year to year, advancing or declining in value, or price.

BACON AND LARD.

In a "review of the trade," issued at Rotterdam, it is stated that in 1888, like several preceding years, the imports of American bacon and lard came here directly supplying the retail trade, and this to a very limited extent only, so that these articles remain lost to transactions in the wholesale business.

The principal importer of and dealer in hog-products at Amsterdam handed me a short statement, which, translated, contains in substance the following:

The imports of American bacon have been very trifling in 1888, amounting in all to only about 30,000 kilograms.

The principal reason for this is that hog-raising, pork-production, in the Netherlands is so largely increasing that it is having the effect of bringing down the prices for inland bacon to about the same as those usually asked for the American article.

In the month of September the stock of domestic bacon was nearly exhausted, causing a more lively demand for the American product. To meet the same small orders were given or purchases made at Antwerp and Liverpool so that the imports, direct and indirect, of American bacon in 1888 can be estimated to have consisted of about 500 cases.

It may also be mentioned that in the month of April about two hundred cases bacon were brought here from Denmark.

The article gave but poor satisfaction, and compared very unfavorably with the American, which is greatly preferred.

The total direct imports of American lard into Holland, during same period of time, have been about 400,000 kilograms.

This figure is also far below what in former years represented them; nor have there been any orders given or contracts made in the fall of the year for future delivery of the goods; at least none deserving notice.

Present indications are that no improvement in the imports and trade in both articles can be looked for or expected during the early months of the current year, if afterwards.

Vessels and their tonnage entered at and cleared from the ports of Yumiden and Amsterdam during the year 1888, distinguishing sailing vessels from steamers and specifying their several nationalities.

GENERAL CONDITIONS.

The facilities afforded me or at hand for arriving at anything like a true knowledge of the actual state or condition of this consular district or this country during or at the close of any year or other period of time are not of such a character as to justify expectations of a full, accurate, and comprehensive description of it.

The subject is so large, the elements which contribute to the country's progress and prosperity or otherwise so diversified, as to make it next to impossible to secure, in official or other quarters, the requisite data, material, and information to base upon them an approximately correct statement of the country's real situation respecting any or all of its principal or material interests.

The accomplishment of the task might, naturally, be greatly aided if there existed in this country a better system of statistics, which, as to its commerce, industries, and still other interests, would compensate a study of them, by affording looked-for and desired information.

Instead thereof, and as it is, nearly all statistics published in Holland are, on account of the peculiar manner and form in which it is usually done, or in consequence of their appearing so late, rendered unavailable for such practical purposes as I would require them to serve me.

I would, however, here remark that a movement has been set on foot on the part of the Government, or rather by the minister of industry, &c., to secure statistics of the industries and manufactures of the country. A step in the right direction was begun about two years ago, and is being followed up by calling into requisition the services of the provincial governors (royal commissaries), and of the respective municipal authorities in causing them to take a kind of census or secure complete statistics of the industries and manufactures within their several jurisdictions.

Blank forms, to be filled out by all parties engaged in any manufacturing industry, have been prepared by the Government, and are now being supplied them for that purpose.

The officials charged with the task will undoubtedly do their best in making themselves as useful as possible in the matter, but how well they will succeed can only be conjectured, and whatever the result of their efforts, it is not apt to be attained or available for publication in a long time to come.

The Government's intention and action certainly comports with the generally prevailing spirit of the times, and deserves to be realized and to succeed; nevertheless, it seems to me to be justified to be observed that it will not meet with much encouragement or be co-operated with with much alacrity by the manufacturers.

Dutch merchants, manufacturers, and other men of business affairs are inordinately reluctant and averse to supply any one, or even their own Government, with information containing minute particulars relating to their commercial, manufacturing, or other operations, especially when at any time calculated or designed for publication.

Anything which, in respect of such matters, seems to them to smack of undue curiosity or inquisitiveness, and which may be construed or suspected to cause any new and increased competition, from any quarter, is looked upon as an attempt of prying into other people's private affairs, and, therefore, distasteful, detested, and generally tabooed.

I write thus at length, and forcibly, upon this point in order to illustrate my displeasing experiences in connection therewith, and as in extenuation of the fact of not furnishing information, upon commercial, industrial, and other subjects, more in accordance with the requirements or desire and expectations of the Department, and more important and useful to our public therein interested.

COMMERCE.

Holland's commercial condition during the year 1888 resembled, in many respects, that of the previous year.

Summarily reviewing and contrasting the situation, from the business point of view, extent, and character of the trade, for the last five years, induces me to say, that the years 1884 and 1885 were characterized by stagnation and general depression as to transactions in nearly all articles of commerce; that the year 1886, particularly the latter half of it, was a period of transition from "very hard times" to "much better," and that the years 1887 and 1888 were "fairly progressive and prosperous."

I would further qualify this statement by remarking that whatever the difference between the last two years, it can be said to have been decidedly in favor of 1888.

Unable, at this time, to bring under or show by any figures the total volume of the trade, import and export, of the past year, the above statement, relating to the same, is grounded upon information from prominent commercial corporations, firms, and persons, such as are most extensively engaged in and best conversant with the nature and extent of what have been the year's transactions and operations; and it also comports with my personal observations in the course of the year.

TOBACCO TRADE.

Having already furnished some information relating to the crop of Sumatra tobacco of 1887 and to transactions in the article in this market during the first nine months of the past year (my report of the 2d of October last), there remains less information of an interesting character to be communicated at this time than would otherwise be the case.

Now, as the entire product has passed under review, and out of the "first hand," or out of the possession of the planters, original importers, or consignees, it is shown that the hitherto from year to year increasing remunerativeness which characterized tobacco raising in Sumatra has experienced a more or less considerable check.

This has not been caused by the crop of 1887 having fallen off in quantity, as on the contrary it was larger by several thousand bales than that of any grown in any one preceding year.

It is represented to be principally, if not solely, owing to the fact that the "average standard" of the quality of the tobacco proved to be far from being as good, or equal to that of last or former years' yields.

As there appeared no signs of any diminution in the general demand for the goods it can only be ascribed to deterioration in its quality that the average price realized for the crop of 1887 is set down at only about 1 florin and 21 cents per half kilogram, as against about florin 1.55 for the crop of 1886, and about florin 1.40 for that of 1885.

It seems altogether to become more and more manifest that even the cultivation of tobacco in Sumatra is subject to vicissitudes, and that the adage of "not all is gold that glitters" applies to it as well as to so many other cases.

For illustration and to show the above remarks to be in place, I would mention as follows:

The Oost Sumatra Tabak Maatschappij (East Sumatra Tobacco Company), organized and established at Amsterdam, within the last three years or less, with a paid-up capital of over 300,000 florins, having concession or holding leases of large tracts of land in Sumatra, which were supposed to be suitable or could be made to answer, at least a large portion of them—for the cultivation of tobacco—has experienced, as it now appears, an utter failure of its enterprise.

At a meeting of its shareholders, called by the director of the company, and held in this city in November last, it was announced in substance:

That but very little of the company's land is really fit for the cultivation of tobacco, and that there seems to be no prospect of success in converting or bringing into proper condition any considerable portion of its lands for the desired purpose that a first effort of raising tobacco on some of it, in 1887, proved extremely unfavorable, both as to quantity and quality of the product, and that up to the present about one-third of the company's capital, necessarily expended in furtherance of its interests, is totally lost.

To avoid further and greater losses it was proposed to liquidate the company's affairs. This was not agreed to, but a committee appointed for the further investigation of the matter.

I am also informed that outside of the residencies or districts of Deli and Lankat tobacco-growing resulted generally quite unprofitably in 1887, and that a good many of the planters sustained actual losses. The great decline in the value of the stock on shares of the principal Amsterdam companies engaged in the tobacco culture in Sumatra will best evidence my above statements.

Deli Maatschappij's shares, which sold on the 1st of January, 1888, at 810 per cent., were quoted in December last at 701 per cent.

Deli Batavia Maatschappij's shares, worth January 1, 1888, 395 per cent., went in December of same year for 365 per cent.

Amsterdam Deli Company's shares, selling in January, 1880, for 560 per cent., brought only 370 per cent. in December following.

According to the published statement of a sworn broker in tobacco the Sumatra crop of 1887 amounted to 144,404 bales, from the sale of which were realized about 26,500,000 florins, as against 138,255 bales, valued at about 32,500,000 florins, for the crop of 1886.

Excepting 13,090 bales brought to and placed upon the market at Rotterdam and 4,886 bales to Bremen, the entire remaining product, or 126,428 bales, was consigned to and disposed of in this market in the course of the year 1888.

There were seven sales here by inscription (sealed bids), and they occurred on May 15, June 6, July 4, August 1, September 26 and 27, October 24, and on November 14.

A few lots were sold at ordinary auctions and some small lots at private sales.

In my report of October 2, 1888, I remarked that rumors were then current according to which the product of certain plantations in Sumatra will in future be consigned to Bremen, and be put upon the market there. I can now state that there seems to be no doubt that an increased quantity will find its way there in the course of the current year, say about 15,000 to 20,000 bales.

Sumatra crop, 1888.—Nothing positive can be stated about it as yet, only this, that reports concerning it are favorable and that it is expected to turn out to be larger than the crop of 1887.

Exports to the United States.—The exports of Sumatra tobacco from Amsterdam or this consular district to the United States have greatly fallen off in 1888, when likened to what they ran up to in 1887.

The shipments of the article last year, 1888, amounted in quantity to 25,321 bales, valued, as per invoices declared to at this consulate, at \$3,827,930.20.

This shows a decrease in the exports, when compared to those of 1887, amounting to 9,951 bales and in value to \$1,997,846.57.

Another noteworthy feature therewith connected consists hereof that a correct computation exhibits the fact that the price realized in this market, per half kilogram, as it is invariably sold—inclusive of all charges—was on an average about 24½ cents Dutch currency, or about 99 cents, for the exports to our country in 1888 as against 2 florins and 71 cents, or \$1.08½, in 1887.

This is not an unimportant difference when viewed in connection with the fact that the purchases for and the shipments to the United States consist, almost exclusively, of the most desirable and best tobacco.

Java tobacco.—The tobacco product of Java is always and entirely consigned to the markets of this country and sold here, principally by inscription, same as is the case with Sumatra tobacco.

The crop of 1887 footed up about 138,000 bales which, sold in 1888, brought on an average about 38½ cents Dutch currency per half kilogram, from the sale of which was realized, according to a broker's estimate the sum of 9,276,000 florins.

Compared to the preceding year's (1886) crop that of 1887 exceeded it by about 31,500 bales, and also brought up 1½ cents more per half kilogram.

It may not be uninteresting when I state that in 1874 the yield of Java tobacco amounted to over 177,000 bales, fetched 78½ cents Dutch currency, per one-half kilogram, with an estimated total value of 22,500,000 florins.

In 1881 the crop was even larger still, as it came up to nearly 196,000 bales, but it turned out to be so poor in quality as to bring, on an average, only 27 cents, Dutch currency the whole product netting but little over a million florins.

Again it may also deserve mention that in 1879 but little over 50,000 bales of tobacco were raised, but the quality having been extra good the crop was disposed of at 66 cents, Dutch currency, per half kilogram whereas in 1882 the yield was about 74,000 bales, but the goods so unsatisfactory in quality as to bring only 28½ cents, same weight and currency.

I furnish the above information as it would seem to show that the cultivation of tobacco in Dutch East India, in Java at least, is subject to radical changes or great ups and downs as regards the production of both quantity and quality from year to year and as indicating (possibly) that Sumatra may yet share the same fate.

Imports of American tobacco.—Amsterdam has not been a market of any note for transactions in American leaf tobacco for many years. Rotterdam's imports and operations in the article are of somewhat greater importance.

The annual imports here do not vary very materially in these days.

Last year they consisted of 2,849 hogsheads of Maryland and Ohio, 196 hogsheads of Kentucky and Virginia, and 922 cases seed-leaf.

Inclosed with this goes a tabulated statement, prepared and published by an enterprising broker of this city, which contains what may possibly be found to be interesting and useful information relating to the crop of Sumatra tobacco of 1887 and to the sales of same at Amsterdam, Rotterdam, and Bremen in 1888.

The statement shows in the first column, date of sales; in the second column, number of bales; in the third column, the different marks; in the fourth column, names of firms purchasing; in the fifth column, the price.

GRAIN TRADE.

At Amsterdam and on the river Zaan the imports of all sorts of grain were very light at the beginning of the year, being restricted to the supply of pressing wants, though prices ruled then quite low.

Afterwards, in consequence of the change in the state of the weather, excessive rains continuing up to harvest-time, and this having been the case in other European countries as well as in Holland, a rise in the prices amounting to from 30 to 40 per cent. took place and much livelier trade resulted therefrom.

Later on buyers became again much more reserved, whilst at the same time urgent offers to sell came in from various quarters, causing the former advance in prices to give way to almost the same low figures at which purchases could be made in the early months of the year. The crops, to a certain extent, came in more or less injured by the wet, and particularly rye, which increased the demand for the foreign article, dry sorts, for baker's use.

Wheat.—The imports of wheat up to the 15th of December are reported to me to have amounted to about 16,000 lasts as against 21,276 lasts in 1887.

The greater part of it was imported from South Russia, but little from the Baltic ports of Dantzic and Königsberg, still less from the United States, and this, as stated to me, because the higher prices ruling there prevented it.

Rye.—The imports of rye were larger in 1888 than during a number of years last past, amounting to about 67,000 lasts as against only 40,588 lasts in 1887.

By far the greater part came from South Russian ports. Dealings here in the article in supplying the home demand as well as re-export transactions to places on the Rhine proved very satisfactory.

Barley.—The imports of barley ran up to 7,700 lasts as against 5,617 lasts in the previous year.

In proportion to the prices of other cereals, those of barley were regarded as high throughout the year.

Maize.—The high prices demanded for this cereal by exporters in the United States

and elsewhere, considered so when compared to the prices of other sorts of grain or food-products, kept off the imports of it; only 5,300 lasts being brought here, as against 24,352 lasts in 1887.

Flour.—The trade here in American wheat flour was, as I learn, very variable during the past year. In the early months of the year rather regular supplies could be brought here at satisfactory prices; and at about the beginning of July fine grades of flour (baker's flour) were even offered and could be imported from the United States at lower prices than from anywhere else. The consequence was that for a while the imports and trade in the article gained in importance. Subsequent unfavorable reports regarding the probable wheat crop in the United States, the asking of higher prices there for the flour, resulted, in August and September, in a reduction of operations. Added thereto there set in, about the same time, a renewed and considerable competition from Hungary, whence rather large quantities of flour were received.

In the later course of the year and up to its close, on account of further advances in the prices in the American market, opportunities for transactions were totally cut off; whilst the millers of this country procured Russian wheat of quality and price such as to enable them to produce the flour notably cheaper than the American.

Such was the condition of the flour trade at the end of the year, when the local or inland millers almost entirely monopolized the trade here.

An improvement of the trade is confidently expected, as it is supposed the demand will increase at more firm prices, because all countries of production, except Russia, harvested more or less short crops last year.

In "low grades" American much less business was done here than in former years, certain grades of rye flour, at lower prices, being largely substituted therefor; the more ordinary qualities of American wheat flour commanded at home, for domestic consumption, better prices than could be obtained for same in this market or country.

The total imports of wheat flour at Amsterdam, in 1888, amounted, according to a statement kindly furnished me by the chief revenue officer at this port, to 13,795,034 kilograms, of which quantity 5,857,566 kilograms came here from the United States.

The imports of rye flour came up to 14,650,021 kilograms, none of which was brought here from the United States.

Rice.—The rice trade, as is stated, gave occasion to dissatisfaction to those interested for several years in succession, until the past year, especially the latter half of it, brought on a favorable change. The advance in the prices of the article was considerable; amounting to about 20 per cent. for all sorts. During the first six months the market was calm with a regular demand and sales, as regards both home trade and export. The prices ruling were more or less firm, regulated by conditions of demand and supply. In the month of August a noticeable improvement came about. The bad weather in the summer and the therewith connected unfavorable reports regarding the then growing crops attracted attention to the low standard of the rice prices. But to this the market had become so accustomed, that little or no belief was created that a rise in the prices would take place.

In September the real situation was more fully realized. The continued rains and the succeeding inundations in many parts of Europe during harvest time, caused fears that great damage and loss would result to the cereal and other food crops; this, together with the constantly advancing grain prices, resulted in a very lively trade, and in a rise in the prices of all sorts of rice.

Afterwards and to the close of the year the demand for "Java Tafel" remained well sustained and very firm for more ordinary sorts, with now and then important sales.

The imports of all kinds of rice into this country in 1888 amounted to 1,376,000 bags, against 1,160,000 bags in 1887, and 1,212,000 bags in 1886.

The imports in all Europe (England, Germany, Netherlands, Belgium, Denmark, France, Italy, and Austria) footed up, during each of the last past five years, as follows: In 1884 to 868,000 tons; 1885 to 766,000; 1886 to 773,000; 1887 to 777,000; 1888 to 990,000.

The exports of rice from this consular district to the United States increased very largely during the past year, when compared with what they were in the previous years; being represented in value by \$276,826.52 for 1888, whereas they amounted to but \$52,338.44 in 1887.

CROP RESULTS.

The secretary of the Holland Agricultural Association has kindly placed me in possession of a statement relating to the result of the crops of the Netherlands, from which I am enabled to quote as follows:

The state of the weather during the past year was far from desirable. Though it caused no complaints in the spring, it did the more so during the summer. Warm

weather, so necessary for the growth of the crops, there was but very little of, whereas the rains fell in superabundance, and as a result thereof, harvesting of nearly all crops came on much later than usual. In September the weather was very fine, and most favorable for the bringing in of the crops, but the damage already done could hardly be made up for.

The wheat product is spoken of as having turned out rather satisfactorily, averaging about 32 hectoliters per hectare; but as to quality, especially color, it was not near so desirable.

From a statement before me, emanating from another source, I quote: that but very little over about 10 per cent. of all arable land in this country is ordinarily under wheat.

Rye, which is also not very extensively cultivated in Holland, produced about 30 hectoliters per hectare, and in consequence of the excessive rains, was found in most places of very inferior quality.

Barley yields 40 hectoliters, more or less, per hectare, but was in great part only of indifferent quality.

Oats.—Of all cereal crops, oats stood best to field, and yielded from 45 to 60 hectoliters per hectare, but as to weight and color, far less favorable results are given.

Horse and pigeon beans suffered very much from the unseasonable, cold summer weather; they got ripe very late, so that in the month of October they stood, in great part, still in the field. The raw wet weather had its injurious influence also upon the cultivation of these products. The beans are generally smaller, poor in color, and the yield, as to quantity, quite indifferent, in many instances less than 26 hectoliters per hectare were obtained.

Pease were brought in late; their color is here and there not as might be desired, their quality, otherwise, fairly satisfactory. The yield was very good; in many places it reached over 30 hectoliters to the hectare. Flax it is reported, did not grow of the usual and desirable length, and, as a consequence, the crop proves unsatisfactory.

Potatoes suffered very much from the well-known "disease," so that in certain sections of the country, on many fields, over one-half of the product was lost, and the yield can, on that account not be estimated higher than about 100 hectoliters, per hectare, on the average. Meadow and cloverlands promised well early in the spring and cattle could be turned out early in the season, but the unfavorable cold weather soon injured and decimated the grass supply, compelling many farmers to bring their "stock" onto lands intended for the hay crop.

Later in the summer grass became more abundant again, but the early frosts injured the grass, and cattle had to be housed earlier than ordinarily is the case.

The hay lands would have yielded sufficiently, had it not been for the constant rains which prevented hay-making; a great deal of mowed grass had to be left many days upon the ground to get it anyways dry—thereby the quality of the hay became generally very poor, and the quantity also much reduced.

The more favorable conditions respecting the weather in the fall of the year afforded an opportunity for an additional hay crop (second cut), of which many farmers availed themselves; however, and as stated to me, the quality of the hay, being the product of a second mowing, is quite inferior.

Another good authority on the subject writes:

"The result of the cereal crops in this country is, stated in few words, for all sorts of grain, about equally defective (mangelhaft). Everything suffered from the excessive rains, and turned out poorly, both quantitatively and qualitatively. Wheat is in general much lighter in weight than usually; and rye was much damaged on the ground from the wet (viel Answuchs)."

The potato crop also came out quite unsatisfactorily. England's crops are estimated to be about 25 per cent. short of what they were the year before. Those of France fell off about 20 per cent. Both countries will have large deficiencies to provide for. Germany estimates its cereal crops (taking 100 as a Norm): wheat at 85; rye, 60; barley, 99. Hungarian reports speak of 110, 85, and 84, respectively, for the sorts of grain just mentioned; Russia's crops have also been less prolific than in the year 1887. Taking the crop-results of all Europe together they may be represented by the figure 90, against 110 in 1887.

POPULATION OF AMSTERDAM.

The population of Amsterdam, which on the 1st of January, 1888, consisted of 183,515 males, and 206,501 females, together of 390,016 persons—

	Males.	Females.
Increased during the year through—		
Births	7,359	6,944
Immigration or settlement	10,314	11,977
Total	17,673	18,921
Decreased in 1888 through—		
Deaths	4,352	4,262
Emigration	8,771	10,174
Total	13,123	14,436

It is thus shown that the population of this city increased to the extent of 4,550 males, and 4,485 females, in all, by 9,035 persons, and on the 31st of December, 1888, consisted of: 188,065 males and 210,986 females; together, 399,051 souls.

LABOR.

An officer of the municipal government, than whom no one is better acquainted with the state of labor or condition of the laboring-classes of this city, favored me with a statement upon the subject, which, translated, contains, in substance, the following:

During the period of the year when ordinarily work is scarcest—late in the fall and early in the winter—the situation, in this respect, was much improved in 1888, as compared with several years last past. Work in some of the industrial establishments or trades was nearer sufficient, and in a few of them more workmen could find employment than is the case under ordinary circumstances.

Able workmen, as a rule, found employment at good wages. Such, however, as upon their own volition, without previous engagements, came here from the provinces, found it far more difficult to obtain work.

It was, and always is—owing to them that last winter, and generally each year, the number of persons out of work (*werkloozen*) was increased and filled up.

In the building trades and kindred branches there was, and is, more animation than has been for some years.

Licenses to build have been issued in greater number, so that stone-cutters, bricklayers, carpenters, painters, and plasterers, etc., had little or no difficulty in getting work.

On account of the city government a number of works, of a more or less extensive character, then and still in course of construction, greatly added to the general labor supply.

As good proof that the situation is much improved in comparison to what it was in 1887 and before, attention is directed to the records of the Labor Exchange here, the demand and supply of labor, as it shows comparatively that the demand was inconsiderable, and that upon calls being made or advertisements published for certain classes of workmen, they were ordinarily responded to by but few workmen.

As another proof of improvement in the workmen's situation the fact is mentioned that the figures representing the values of goods pawned and redeemed in the pawn-brokers' shops of this city during the year 1888, contrast most favorably, when compared with those of the preceding year, when already they could not be regarded as unfavorable.

Again, it is remarked that the deposits in the Government postal-savings banks, and as well in the city savings banks, are steadily increasing. (That the laboring classes contribute largely to this result is more than doubtful.) It is also stated that in consequence of a strike occurring last summer at Hamburg quite a number of workmen, principally carpenters, went there from here, but nothing is said as to how they succeeded there or what became of them. Recently a strong inclination became manifest on the part of many to emigrate to the Argentine Republic, where, as it seems, workmen and laborers of different classes are offered employment at favorable terms. Several families have gone there, and more are to follow.

D. ECKSTEIN,
Consul.

THOS. HEENAN,
Consul.

UNITED STATES CONSULATE,
Odessa, July 25, 1888.

RIGA.

The value of declared exports from this consular district to the United States for the year ending the 30th September, 1888, amount to \$57,024.44, which, compared with \$60,443.63 for 1887, shows a decrease of \$9,419.19.

The articles exported have consisted chiefly of flax, gloves, hemp, leather, and skins, linseed, liquors, and printed books.

With regard to the import from the United States to this port there is no new feature to note. The articles, such as agricultural implements, machines, and tools are coming in small quantities only, but the increased value of the Russian paper currency of late will doubtless tend to augment the import. The rise in the rate of exchange on London from the middle of February, when at its lowest point, up to the present date, amounts to about 25 per cent.

The railroad from Riga through the Province of Livonia, which puts this port in connection with large grain and flax-producing districts in the interior, is now nearly finished, and will shortly be opened to the traffic.

NAVIGATION.

The navigation to this port was interrupted from the beginning of January until the end of April through ice in the Riga Bay, and from the re-opening up till this date there have arrived in this port 1,147 steamers and 692 sailers, mostly under English, German, and Scandinavian flags. No American vessel has visited this port during the year.

VALUE OF EXPORTS AND IMPORTS.

The value in 1887 of imports was \$12,538,751; exports, \$26,138,205, which, compared with 1886, imports \$11,378,270, exports \$17,005,427, shows an increase of \$1,160,481 in imports and \$9,132,778 exports, from which it will appear that the trade from this port during the year under review has been considerably increased, mostly due to the exceptionally good crop in these districts. A large crop of grain is expected this year, and owing to the failing crops in several ports in Europe, this country will be able to cover some of these deficiencies, and in consequence a large export business this autumn and next spring may be anticipated from this port. For flax and hemp, which are also principal export staples from this district, the prospects of a good crop are reported.

P. BORNHOLDT,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Riga, October 6, 1888.

SPAIN.

BARCELONA.

REPORT BY CONSUL SCHEUCH.

I have the honor to transmit a statistical report on the international commerce of Barcelona both by sea and by land during the year 1888.

IMPORTATIONS.

That the importations of 1888 have been about equal to those of the previous year, presenting a net total of 812,042 tons, against 819,892 tons in 1887.

RESULTS.

Coffee shows an increase of 458 tons. The importation from Porto Rico increases in proportion to the annual lowering of duties. It is also worthy of notice the increase in the imports from the Philippine Islands, which enjoy the same advantages as the West Indies.

Hard coal shows an increase of 35,189 tons. The consumption of coal is increasing with the progressive use of gas for domestic purposes; the public and private illuminations during the festivals of the exposition considerably increased the consumption also. Two exclusive qualities were imported from England: Cardiff coal, twice sifted, to produce steam; Newcastle coal, for gas and heating.

Timber and lumber increased 2,688,000. The increase casual. The importation from the United States did not exceed 1,172,000 pitch pine and fir, for boxes, against 3,700,000 in 1887. The timber from Canada, Austria, and Roumania were also less, those of Finland having had a greater demand, the importation of which has been this year 56,224 against 41,800 in 1887, owing to the cheapness of freight resulting from the large number of Swedish and Danish ships which remained disposable on account of the non-transportation of alcohol, which formerly gave them freight.

Unrefined petroleum, black rosin, and dry pitch increased 5,773 tons, coming from the United States, since the only importations which took place in 1887 came from Russia,

and were suspended owing to the danger of its transportation by the Mediterranean, on account of its excessive inflammability. Dry rosin is imported from England (2,500 tons) and is used in mixing up with coal dust from San Juan de las Abadesas, thereby forming the mixture into a kind of brick to burn in locomotives.

There has been a diminution in oils, on account of a recent reform in custom-house duties (May 14), so that oils of less density (900° below) which are the cheapest and most generally used, pay more duties than those of more density (above 900°). This is quite an obstacle to its importation. The same thing happens to the valvoline of the United States, which must be paid for at the same rate as the oils, which being an article that is substituted for tallow, it would be more logical to have it paid at the same rate. The result is that there has been no importation of valvoline.

As to resinous materials there are considerable quantities introduced from France and England of bituminous residues.

Hemp shows an increase. The introduction of hemp, belonging to the class for feather-grass, for rope making and "alpargatas" (a kind of sandal) did not suffer any alteration excepting jute, which was imported from British India in large quantities for the manufacture of carpets and mixing with other goods.

Potato starch shows a casual increase of 806 tons.

Those which were diminished in quantity were—

Wheat decreased 14,475 tons. The United States did not export to this country in 1888 more than 18,707 tons, against 64,774 in 1887. The cause of this decrease was—

Arrivals from Candial de Castilla, the effects of the abundance of the last crop and of the lowering of the price of transportation; arrivals from the Black Sea and Lower Danube, 83,000 tons, against 63,000 in 1887; the Argentine Republic also contributed 7,257 tons to the supply of this place (2,616 tons in 1887), due more to the lack of freights than to the excess of production, for vessels which had to return in ballast from La Plata seeking cargoes for the ports of Europe. The progress of that republic in the culture of wheat and wine can not already be denied.

Flour.—The introduction of wheat flour from France and Austria did not exceed 3,500 tons, including those that come by land. However, it was triple the amount of the previous year, thanks in part to diminished duties of entry and partly that our neighbors grant to exporters a prime of 5 per cent. cash, in view of which the flour industry of Spain is asking for an increase on the duty of importation and which is already believed will be from 10 to 12 per cent. per 100 kilos.

In recapitulating the importation of flour in all Spain during the first quarter of the last three years, the result is: In 1886, 9,000,000 kilograms; in 1887, 20,000,000; in 1888, 35,049,190.

At this rate it is very evident that it will soon eclipse the importation of wheat not only from the Black Sea but from the United States, if some reform does not take place in favor of the Spanish millers.

Corn shows a decrease, which is explained by the complete paralyzation of alcoholic industry since the promulgation of the law against alcohols.

Sugar, 7,008 tons less, in consequence of which there is a scarcity in the deposits, and prices are firm. The consumption of sugar is also prejudiced by the introduction of "sacharina" (mineral sugar), which is daily on the increase, applied to the manufacture of cordials, sirups, sweetmeats, etc.

Alcohol decreases. The arrivals from Germany and Sweden ceased completely, even before the prohibition; the exorbitant duties proposed upon alcohol, and the fear of the importers that the duties would be made retrogressive, on the day of its promulgation, upon the existing deposits, and which actually occurred, even with national production, was the cause. This proceeding caused so much disgust to the alcoholic industry and to commerce that many establishments were closed in consequence, in various parts, causing much discussion and opposition to this unfortunate law, and which may be repealed, since the income to the treasury is almost nil. Whilst no modification is made it will be impossible to give this article a start, as the actual duties will prevent it, and consequently what is on sale of alcohol or strong spirits or rum from Santiago have no offer or purchaser. In 1888 the importation of the latter was not more than 873 tons against 1,388 in 1887.

Since last June there were no importations either from Germany or Sweden.

The cultivators of wine are also opposed to the law, on account of the preparation of their wines for exportation.

Codfish.—The normal consumption of this article is 6,000 tons, and the difference of one year to the other is merely casual.

Meats show a decrease. This year there were no importations of meat from Algiers, those of Mancha and Andalusia, and which have suffered a great reduction in price from the effect of the low price of wool and skins and other economical circumstances, being greatly preferred.

Cotton decreased. The introduction from the United States was in 1888, 28,997 tons, against 30,342 in 1887. Then followed the manufacturing crisis, which much diminished the exportation of cotton goods to the West Indies and South America. However, in consequence of the small quantity in first hands, the price of cotton has improved, and though few the requisitions that may be made to manufacture, so far as can be judged, prices have improved, and the rise will be firm.

Charcoal decreased. This article continues to diminish on account of the greater employment of gas for heating purposes.

Lime and cement decreased. This article has again returned to its normal importation demanded by building industry, which is about 10,000 tons annually, not having been so much in demand in 1888 as during 1887 on account of the extra work of the future exposition.

Wrought and cast iron decreased. The annual consumption is from 12,000 to 15,000 tons and the difference of one year or the other is purely casual, for there is no metallurgical establishment in the country; consequently, it must provide itself from foreign countries, although from Bilbao they are beginning to obtain bars and sheets which are preferred to those of Belgium by the rustic classes.

Guano less. The introduction of this manure is diminishing in consequence of the increasing consumption of the chemical manure coming mostly from the Bisque province.

Mahogany.—The stores are well supplied with the smaller cuts, there being, however, a good assortment in deposits in the hands of speculators. At the present time cedar is somewhat scarce, and is much sought after. The introduction of mahogany and walnut veneers from France has also somewhat diminished on account of the quantity in deposit and also for lack of work in this branch of industry.

Wax.—The importation of wax does not exceed 157 tons, since that imported from Germany is throwing the native product out of the market.

The total imports of manufactured articles in 1888 was more or less equal to that of the previous year, being 51,862 tons against 50,774 in 1887.

It appears to me superfluous to enter into the description of the infinite variety of small articles which are manufactured, so I shall limit myself to those articles of greater consumption with which commerce supplies itself. The principal articles imported were as follows: Lithographic stones and fine slate glassware for table service, tubes, rulers, globes, prisms, siphons, mattresses, retorts, syringes, funnels, sheet-glass, and looking-glasses, etc.; window-glass for buildings, stone slabs for pavements, porcelain and flint-ware for table use and ornaments, kitchen-ware, irons for ironing of cast-iron, sledge-hammers, rivets, screws and nails, cooking-pans and forged kitchen-ware, locksmiths' work, etc.; coffee-pots, tinware and sheet tin, cutlery, knives, razors, needles, pins, etc.; fire-arms (revolvers, rifles, cartridges), metallic table ware, trays, lamps, gas apparatus, etc.; types for printing, capsules and sheet-tin, varnishes and colors, printing and writing inks; every kind of chemical produce for the arts, industry, and pharmacy; dextrine and glucose, sulphate of copper, bromide of potassium, chlorhydrate of aniline, oxalic acid, etc.; glue and albumen, linen-thread goods and stamped wool; every kind of superior goods, carpets and pelts; every kind of paper, Bristol, Cartoline, fine pasteboard, wood paste, cut paper; wooden furniture, curved and straight; tanned and varnished leather, motive and industrial machinery, oil-cloths for tables, flooring, lining, and packing, starched goods.

To conclude, I will now give an account of the different articles imported from the United States:

EXPORTATIONS.

The exportations by sea in 1888 were 145,659 tons against 136,851 in 1887, an increase of 8,808 tons. Raw materials, 1888, 10,515 tons; in 1887, 5,363 tons; 5,152 tons more. Alimentary substances, 1888, 110,417 tons; in 1887, 116,434 tons; 6,017 tons less. Manufactured goods, in 1888, 24,727 tons; in 1887, 15,054 tons; 9,673 tons more.

The increase of raw material is accounted for by larger exports to the colonies. Italy also got a supply of old iron from the Northern Railroad.

In the alimentary substances may be noticed a considerable increase in the exportation of oranges, almonds, olive-oil, and brandy.

Wines.—Notwithstanding the obstacles which the French custom-house opposes to the introduction of Spanish wines since its non-intercourse with Italy, the importation has not diminished in France.

To these difficulties is to be added the circumstance that the new vineyards in France are beginning to prosper. We can foresee how far France can compete with Spanish wines. On the other hand, the cultivation of the vine has been greatly developed in Spain in consequence of the handsome profits obtained from the neighboring nations, in consequence of which the deposits of wines in the hands of the cultivators is very considerable, and they continue to keep up the price in proportion to the demand.

Almonds.—This product is very animated in the localities where it is cultivated, and well in demand, as it is scarce in second hands. People are confident that the next crop will be a very superior one, because the stormy weather having subsided somewhat earlier than in previous years, a most favorable season is anticipated for the flower and fruit.

Olive-oil.—The progress in the care of the making is the cause of the increase of the exportation, and also of the cultivation of the olive, being enabled already to calculate the actual production of all Spain in 3,360,000 hectoliters.

In manufactured goods there was an increase of 9,674 tons, principally of earthenware goods, soap, and candles for the West Indies and the Philippine Islands, and other places of less note. The exportation of cotton goods suffered a considerable diminution.

As to other articles manufactured locally, such as cigarette-paper, corks, leather shoes, and alpargatas (a kind of sandal much worn here), fans, playing-cards, and guitars, there has been no variation in the figures of last year, and they are exported with invariable regularity to the Spanish Possessions, including the West Indies, Martinique, and Trinidad, which are of French and English dominion.

To resume, the exportation from Barcelona to foreign countries is limited to wine, olive-oil, almonds, oranges, rags, red pepper, and saffron.

NAVIGATION.

The result in 1888 is an increase upon 1887 of 122 vessels, and 322,730 tons; 180 steamers more, and 58 sailing-vessels less.

The entries with Spanish flag have been 967 steamers, 1,684 sailing vessels of 962,893 tons against 892 steamers; 1,667 sailing-vessels of 780,882 tons in 1887.

I have to attribute this increase to the national and colonial movement caused by the Universal Exposition, on account of which occasion the Peninsula and West Indies regular transport services were greatly, but by no means adequately, increased.

The entries under the Italian flag have been 109 steamers and 173 sailing vessels of 229,227 tons in place of 50 steamers and 163 sailing-vessels of 137,142 tons in 1887, an increase of 50 steamers, 10 sailing-vessels of 92,085 tons. The result may be attributed to the development of intercourse of the port of Genoa with the republics of La Plata more than direct communication with this port on account of the exposition.

Whilst 44 steamers of 1,200 to 2,800 tons each left Genoa with 46,813 passengers en route for La Plata, only 874 passengers landed at this port. The number of passengers that followed on to America can be estimated at 45,949 persons besides a few who left Spain, the number of whom I could not well ascertain.

The French flag had an increase of 26 vessels and 64,033 tons. The exposition contributed very little to augment the movement of Cette and Marseilles.

The Swedish flag suffered a considerable diminution on account of stopping the shipments of alcohols from Stettin and Carlsahamn in consequence of the law to which I have referred elsewhere.

The movement of other flags was more or less the same as in the previous year.

In this statement is not included the ships-of-war, which were 94 with 26,500 men, nor the pleasure yachts, which were 36 with 4,096 tons.

FRED'K H. SCHEUCH,
Consul.

ERNEST A. MAN,
Consul.

UNITED STATES CONSULATE,
Gothenburg, May 21, 1889.

NORWAY.

BERGEN.

REPORT BY CONSUL GADE.

FISHERIES.

The total amount of proceeds from the cod fisheries for the year 1888, according to the lately published official reports, is stated at 59,000,000 to 60,000,000 of fish, at a value of 13,000,000. kroner, equals \$3,800,000; of which a quantity, about 44,000,000, were salted and cured for klipfish alone.

For the two preceding years the figures were: For 1887, 54,000,000, valued at 8,000,000 kroner; for 1886, 65,000,000, valued at 12,750,000 kroner.

The fish on all the banks, and principally at Lofoden, was of a good quality, and much fatter than the two foregoing years, and consequently the quantity of liver oil was large.

The sanguine expectations of an abundant winter herring fishery were not realized, at the close of the season only about 60,000 barrels being the result, of which the one-half was salted, and the other half exported to England and Holland as smoked and also in the fresh state in ice. The prices may be quoted not above 4 kroner per barrel, and the whole catch valued at 280,000 kroner, equals \$7,400, against 325,000 kroner in 1887.

The outfits and preparations for the last season's summer herring fishery were made on a larger scale than usual. It commenced in August and lasted, with but few interruptions along the whole widespread coast, to the end of the year, with a final result of about 700,000 barrels, which for the greatest part were exported in the salted state, but thereof also 20,000 barrels smoked. The quality of the herring was very good this season, but the size smaller than ordinary.

Also, during the last year the demand for this article for the United States has increased, and exports amounting to \$108,200; but also the sale of the smoked and prepared article has improved and promise to get a steady, good market.

Also, the Norwegian mackerel has lately been successfully introduced into the American market, and our exporters getting better acquainted with the demand of their new customers, this article, too, no doubt, will be of importance. The mackerel catch for the past season was estimated at 7,000,000 of fish, at a value of 800,000 kroner (\$215,000), the average price being 11½ kroner (\$3.10) for 100 fish.

The producers, as well as dealers and exporters, of nearly all our fish products may look back upon their profits for the past year with satisfaction, which, for some of the

principal articles, as klipfish and herring, were even better than for several years past. Of fish-oil the quantity produced, owing to the fatness of the fish, was uncommonly large, and the prices, after many fluctuations during the season, went gradually down from 55 kroner per barrel to 37 kroner for good quality of refined medium, which is reported to be the lowest figure paid at the close of the year.

Also, the article of spawn, of which is produced about 45,000 barrels, was much neglected, and a quantity of more than 20,000 barrels are still on the hands of the exporters, waiting for the coming new season of the sardine fishery in France, where it is used for bait.

SHIPPING.

This consular district, and principally Bergen and the neighbor town, Stavanger, both possessing a large tonnage, as well of steam as sailing vessels, have got a good share of the past year's improved state of the shipping trade, and during the year our several steamship-building wharfs have had good work, and besides, about twenty steam-ships of together 15,000 tons burden have, by purchase in England, been added to the Bergen fleet, this now making about 60 per cent. of that of the whole country.

On the whole, the trade in its different branches for this district has been satisfactory and improving, and but very few failures have been reported.

During the past year no American vessel has entered or cleared from this port.

IMPORTS FROM UNITED STATES.

The proportionate small direct import from the United States, as shown by the enclosed list No. 2, consisting of 18,119 barrels of petroleum, was made exclusively by Norwegian vessels, and the exports went, as usual, partly by the direct liners to America via Christiansand, but chiefly by way of England, these lines having now reduced their rates.

EMIGRATION.

During the year 1888 the number of emigrants from this consular district to the United States amounted in all to 9,848 persons, whereof from Bergen 1,943, from Stavanger 1,908, and 5,997 from Trondhjem, of which, however, the greatest number were Swedes, for whom Trondhjem is the nearest port. This year the emigration probably will not be so lively, the economical state of the population having improved, and regular employment to be had here at higher prices.

F. G. GADE,
Consul.

UNITED STATES CONSULATE,
Bergen, February 8, 1889.

Declared value of exports from the consular district of Bergen to the United States during the four quarters of the year ending December 31, 1888.

CHRISTIANIA.

REPORT BY CONSUL GADE.

AGRICULTURE.

The past year of 1888 was, for the most part, cold and damp in this country, and the results of farming were in consequence anything but satisfactory and were below those of an average year. The long and unusually severe winter lasted in some districts into the month of May, when the whole stock of fodder was exhausted, and the price of hay had run up considerably all over the country. In some mountain districts the cattle had to be fed with moss, and in the coast district sea-weed and refuse of the fisheries largely replaced the common fodder. When summer finally came, it was for some time very warm and dry, and in Christiania the thermometer stood higher towards the end of June than it has done for fifty years. The Norwegian summer is always short, but in 1888 the first frost occurred already on September 9 in one of the best agricultural districts, injuring the crops of oats and potatoes. The grain crops were on the whole poor, as the cold weather prevented the ripening of the grain in many places.

Potatoes are the chief article of food in Norway, and they fortunately seem to thrive better here than in many other countries even under so unfavorable climatic conditions as those of the year of 1888, when the crop here was quite good and the quality satisfactory. Progress in the improvement of dairy products was noticed in many districts. The Government has established dairy schools for men and women, and has secured the services of experts in cheese and butter making from other countries to travel about in the rural districts and give instructions to the farmers. The mountains of Norway produce a great variety of wild berries which have hitherto been little regarded. They are juicy and of fresh flavor, and are becoming a great article of export. Cranberries have lately been exported to the United States in considerable quantities.

SHEEP AND HORSES.

Norwegian sheep, numbering about 12,000, and representing 180,000 kroner, were during the past year sold to the English market. The western coast districts, which have 800,000 sheep, are by reason of their mild climate particularly adapted to sheep raising, and the Storting has made an appropriation for improving the native races by importation of Cheviot sheep, which were sold to the farmers. The exportation of horses has lately been on the increase. Denmark, which is a new customer in the Norwegian horse market, bought about 1,000 ponies in 1888.

The condition of the peasantry here is not an enviable one. Many of them are heavily in debt, and as a rule they live beyond their incomes.

SHIPPING.

A very surprising and welcome improvement in the freight rates succeeded in 1888 a long period of depression, and during the second half of the year the rates were much higher than those quoted during many previous years. The rates from American ports and from the Black Sea showed the largest rise, and in some instances they were even vent, higher than those of the preceding year.

The change was attributed to the general improvement in business everywhere abroad, and above all to the increasing importation of grain in the British market, France, and other countries, where the crops had proved insufficient. The carrying trade to the La Plata states from the so-called pitch-pine ports of the Southern States was said to be especially remunerative to the numerous Norwegian vessels engaged in that trade. The petroleum rates from America and the coal freights from British ports were also very satisfactory to ship-owners here during the last half of the year, and at the close of 1888 the prospects were very bright in almost all ports where the Norwegian flag was displayed.

As a natural consequence of the revival of shipping, domestic ship-building, which had lately declined much, has received a fresh impulse. Sailing vessels of wood still form the larger part of the mercantile marine, and to them a great addition was made in 1888 by purchases from foreign countries. One hundred and forty sailing vessels, giving a total of 85,000 tons, were bought abroad in 1888, more than half of them in England and the remainder in Belgium, Holland, and in Finland, from which countries the vessels are still sailing with a temporary certificate of nationality. Only 30 new sailing vessels, of an aggregate tonnage of 8,200 tons, were built on Norwegian ship-yards in 1888, so the gross increase of sailing vessels belonging to this country should amount to 93,000 tons. At the same time 70,000 tons of sailing vessels were supposed to be lost, which leaves a balance of 1,400,000 tons of sailing vessels in the mercantile marine at the beginning of the present year. Thirteen steamers, of a total tonnage of 2,400 tons, built in this country, and 25, of 14,500 tons, bought abroad, were in 1888 added to the steam tonnage. The port of Bergen alone contributed 70 per cent. of this addition to the steamers.

FISHERIES.

The great Lofoden cod fisheries, which were carried on in 1888 in calm cold weather, occupied 32,000 men in 7850 boats, the largest number ever assembled on these fishing grounds. They yielded over 27,000,000 fish, 22,000,000 of which were salted and cured for exportation, besides 38,000 hectoliters of liver and 39,000 hectoliters of roe. Sixty-one thousand one hundred hectoliters of cod-liver oil were manufactured for medicinal purposes, and over 13,000,000 of fish-heads were prepared as guano. The fish were much larger and fatter, yielding more liver and roe than in 1887, and they brought higher prices than in the preceding years. The average price was 18 kroner per 100 fish, the fishermen always selling their catch by number, so much per hundred.

The average profit of each fisherman in 1888 was 190 kroner. The total value of all the products of these fisheries in 1888 was estimated at 6,100,000 kroner, which is that of an average year. Outside the Lofoden Islands some 8,000,000 of fish were caught at about the same time, and a little later 9,000,000 cod were again fished on the Finmarken coasts, the prices paid there being from 16 to 18 kroner per 100 fish. The total results of all the Norwegian cod fisheries may be estimated at about 60,000,000 fish, or 10 000,000 fish above the result of an average year. They represented a capital of at least 12,000,000 kroner, which is considered a fair result. Spite of the higher prices paid in 1888, the merchants, too, had a profitable business. During the summer the prices of fish rose in foreign markets partly on account of the poor results of the Newfoundland fisheries and partly through the non-renewal of the commercial treaty between France and Italy. In the latter country the duties on French fish was suddenly raised and the Norwegians had no difficulty in regaining a market seriously threatened by the subsidized French fish.

The roe of cod-fish, large quantities of which are used in France as bait for the sardine fisheries, brought poor prices in 1888, and the exporters of cod-liver oil did a poor business, owing to the constant fall in prices. The Japanese oil has lately become a rival of the Norwegian in the German market. The United States imported during the past year 2,000 barrels of Norwegian oil for medicinal purposes.

Herring were, as usual, caught on all points of the extensive coast line, but it is very difficult to give reliable data as to the result of these fisheries. The winter or spring herring fisheries in Southern Norway were a disappointment in 1888, and yielded scarcely half of the catch of 1887. As an offset the prices obtained were much better, namely, 3.64 kroner per measure (a new barrel for fish), to 1.87 kroner in the preceding year. This is, however, much lower than some years ago, when herring brought up to 20.06 kroner per measure.

The low prices of the few past years, occasioned by high duties imposed on herring in Russia and Germany, as well as by abundant fisheries in Sweden, are hardly sufficient to cover the losses of nets and wear and tear of the fishing tackle suffered by the fishermen. Ten or twelve large smoking establishments are now preparing herring for exportation to England. Of far greater importance was the herring caught in the north during the last half of the year. It was large and fat, and yielded at least 400,000 barrels for exportation, besides large quantities for home consumption.

Mackerel are only caught in southern Norway, and they yielded 7,000,000 of fish, valued at 500,000 kroner for exportation. The average price paid to the fishermen was 11.50 kroner per 100 mackerel. England, Denmark, and Germany import this article packed in ice. Also, the United States, which began to import Norwegian mackerel in 1887, continued in 1888, and the business is said to have given a satisfactory result.

Sealing was, in 1888, carried on in the Polar Sea, off Ian Maya, and in the White Sea, with 23 steamers, and brought 81,424 skins (of which 45,000 of young seals), 13,655 barrels of blubber, 61 polar bears, 457 bottle-nose whales, and 4,391 barrels of whale blubber. The skins and the oil brought about the same prices as in 1887, and the net profits of all the expeditions was estimated at 158,000 kroner, which is a little better than the result of 1887. Twenty-six vessels were employed in the bottle-nose catch, and killed 1,033 whales to 1,142 in 1887. On the other hand, the oil was paid 30 per cent. better than in the latter year. We have, in conclusion, the whaling on the Finmarken coast, where 34 steamers killed 696 whales, yielding 22,000 barrels of oil. The gross result of these expeditions was estimated at 1,200,000 kroner, and was considered quite satisfactory. The prices of whale oil and whale guano were higher than in 1887.

LUMBER.

The improvement in this branch of industry, apparent at the end of 1887 after years of depression, continued in 1888 to an extent surpassing all expectations. Prices continued rising until they reached those of 1882. The aggregate export of forest products of different kinds, with the exception of wood pulp, was estimated at 857,000 registered tons, valued at 30,000,000 kroner, compared with 340,000 tons in 1887, valued at 28,000,000. Australia has continued a good customer of planed wood, and sent prices up by large purchases in the first half of the year. This distant country consumed more Norwegian planed lumber (in 1888 over 41,000 registered tons) than any other country, England alone excepted. The prospects of a profitable business in the current year are very promising, though the market of London, which consumes the bulk of Norwegian planks and deals, is well stocked with these articles.

WOOD PULP

Becomes every year a more important article of export from this country, and occupies now 53 mills, with 1,552 workmen. The exports, including some Swedish pulp, shipped over Norway, were in 1888 estimated at about 200,000 tons (pulp of different kinds reduced to moist pulp of 50 per cent. water) valued at 7,000,000 kroner. During the five previous years the exportation amounted to, in—

	Tons.		Tons.
1883	80,748	1886	116,785
1884	88,220	1887	158,103
1885	106,916		

Owing to the higher sea freights and the scarcity of water last winter in all Norwegian rivers, which finally stopped the mills, the prices of wood-pulp has gradually gone up a little, but it is on the whole at present only one-third of what this article brought in 1870.

The subjoined figures show to what extent the United States have imported pulp from Norway during the past few years:

	1884.	1885.	1886.	1887.	1888.	Total.
Wood-pulp:	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Dry	837	440	811	2,185	2,842	6,585
Moist	6,609	5,010	6,222	12,812	18,270	43,423
Total	7,446	5,450	7,033	14,467	18,612	50,008
Value	\$84,086	\$67,299	\$186,079	\$346,881	\$448,831	\$1,077,876

EMIGRATION.

In 1888 the emigration from Norway was a little larger than in 1887, viz. 27,552, compared with 25,722 in the preceding year. Thirteen thousand five hundred and eight emigrants left via Christiania, 6,683 of whom were women and children, 1,509 were from city itself, 7,838 came from the rural districts, and 4,080 are reported as foreigners,

most of them probably Swedes. The passage money of the emigrants from Christiania was estimated at 1,086,000 kroner; 6,499 had their passage prepaid in America. After Christiania the shipping ports for emigrants 1888 rank as follows:

Ports.	Emi- grants.	Ports.	Emi- grants.
Trondhjem.....	5,997	Bergen.....	1,948
Christiansand	2,815	Stavanger.....	1,908

It is not possible to give exactly the trade and profession of the emigrants from this country to the United States in 1888, but it appears from several reports already published that a large number of seamen left from the western districts, and that the bulk of emigrants from eastern Norway consisted of farmers from the rural districts and artisans from the cities.

FINANCES.

The accounts of the treasury for the last fiscal year ended June 30, 1888, were balanced with a deficit of 619,000 kroner, against 500,000 kroner, as calculated in the budget. The Government receipts were 43,976,000 and the expenditures 44,595,000. The national debt amounted on June 30, 1888, to 105,283,000 kroner, and in the course of the last half of the year a new government loan, bearing interest at 3½ per cent., was contracted for the conversion of the 4½ and 4 per cent. loans of 1878 and 1884. It is supposed that the Government now proposes to obtain appropriations of 20,000,000 kroner for the construction of new railroads. No addition to the present net of railroads was made in 1888, but the receipts of the past year show an increase of 8 per cent. over those of 1887.

INDUSTRIES.

In 1888 horseshoe nails were exported to the amount of 2,500,000 kroner, and were introduced into several new foreign markets. Forty-six breweries supplied the country with beer, the consumption of which beverage was, in 1887, estimated at 13.3 liters per individual, compared with 17.7 liters during the period 1878 to 1882, and 20.1 liters in 1873 to 1877. During the past year 13,300 hectoliters were exported, probably at small profit for the breweries.

The consumption of domestic whisky, which is now constantly falling off, and on the production of which the tax was raised 12.6 öre per liter, amounted in 1888 to 4,600,000 liters of 50 per cent. of alcoholic strength; 300,000 liters were exported to foreign markets, but at low prices. France and Spain had just begun to import Norwegian spirits, but owing to the increased import duties they must now be regarded as closed markets.

Fifty tobacco manufactories, which during the first eleven months of the year imported 1,250,000 kilograms of raw tobacco leaves, are now working in this country, but large quantities of smoking-tobacco, cigars, and cigarettes are also imported from Germany, Holland, and the United States. The duty on raw tobacco leaves was increased from 1.25 to 1.75 kroner. The statistics show that the consumption of tobacco, which during 1871 to 1875 was 1.15 kroner, and in 1876 to 1880 was 1.20 kroner per individual, fell off considerably after the rise in the duty in 1880. In 1880-'81 the consumption of tobacco was only 0.85 kroner per individual, and will now probably further decline after the new increase of duty.

The match factories are every year exporting larger quantities of these products to foreign markets, and their shippings were in 1888 estimated at 4,800,000 kilograms, against 3,177,000 in 1884 and 2,336,000 kilograms in 1881. The bulk of matches goes to India (Calcutta and Madras), and a small quantity of the so-called safety matches is sold to China and Japan, which countries, however, have lately commenced to compete with European match-producers. English capitalists are now negotiating to buy almost all the match factories in Sweden and Norway in order to gain the monopoly of this article in the English market. Similar plans for buying all the Norwegian breweries and wood-pulp mills with English capital are also reported.

EXPORTS.

No American vessels arrived in 1888 to this port, with the exception of the U. S. steam-ship *Enterprise*, which in the month of July spent a week here. From the port of Fredericksstad, within this district, where there is a lively export trade with Australia, an American sailing vessel took a cargo of planed lumber for Melbourne.

I beg to subjoin a list of the exports from this consular district during the calendar year of 1888 to the United States, together with the declared values of same:

Articles.	Value.	Articles.	Value.

GERH. GADE,
Consul.

UNITED STATES CONSULATE,
February 4, 1889.

GOTHENBURG.

REPORT BY CONSUL MAN.

BUSINESS REVIVAL.

The business activity which was felt in the markets of other countries in 1887 seems to have finally reached Sweden, as the year 1888 evidenced a noticeable increase and animation in trade and navigation.

Full treasures and low rates of interest were inducements to new commercial enterprises, and these undertakings, combined with the usual contagion of general activity and competition, seem to have toned business up considerably during 1888.

An increased demand for transportation raised the price of freights and caused additional liveliness in navigation. Custom-house receipts, as well as the tonnage of the vessels arriving here from foreign ports, was much greater than the foregoing year, in fact the tonnage was the largest ever entered. Exports of metal, lumber, pit-props, matches, fish, and pork, oil-cake, cotton and woolen goods, cattle, butter, paper, and wood-pulp increased in comparison with the year before, while cereals, machinery, implements, and tar were less than in 1887.

Imports of wheat, cotton, coffee, rice, raw sugar, salt, tobacco, leaves, coal and coke, hides and skins, oil and pig-iron, show an increase, while rye, barley, Indian corn, wheat and rye flour, unrefined sugar, and American pork decreased.

FOREIGN EXCHANGE.

Transactions in foreign exchange at Gothenburg amounted in 1888 to \$6,456,031, an increase of \$239,212 as compared with the year 1887. As compared with the preceding year the values of the different kinds were as follows:

Description.	1888.	1887.
Pounds.....	956,817 10 2	879,619 12 3
Riksmarks.....	4,501,102.72	5,178,400.86
Francs.....	3,739,601.72	3,314,479.39
Holland florins.....	84,461.39	78,577.11

Transactions in foreign exchange at Gothenburg during the eleven years, 1878 to 1888, inclusive, were as follows:

1878.....	\$13,883,338	1884.....	\$6,501,320
1879.....	10,679,719	1885.....	5,063,536
1880.....	10,975,574	1886.....	5,597,799
1881.....	9,758,201	1887.....	6,166,819
1882.....	9,207,828	1888.....	6,456,951
1883.....	8,066,951		

CUSTOMS RECEIPTS.

The receipts of the custom-house at Gothenburg amounted in 1888 to \$2,380,465, an increase of \$240,336 as compared with the previous year.

NAVIGATION.

At the close of the year the following vessels were registered at this port:

Class.	No.	Tonnage.	Horse-power.
Steam-vessels.....	110	44,715.06	7,673
Sailing vessels.....	104	45,761.51	
Total.....	214	90,476.57	7,673

During the year 7 vessels of 1,311 tons were built, and 12 of 8,338 tons were purchased; 3 vessels of 1,200 tons were lost and 17 of 4,223 tons were sold.

The number of vessels and amount of tonnage owned at the end of the year 1833, as compared with 1887, shows an increase of 8 steam-vessels and a decrease of 9 sailing vessels, but a gain of 4,216.13 tons in the tonnage.

FREIGHTS.

In direct contrast to the free navigation experienced in the early months of 1887, the beginning of 1888 found the water approaches to Gothenburg in every direction obstructed by an almost impregnable ice barrier created by an unusually severe winter, and which, but for the powerful and unremitting efforts of the ice-breaking steamer, constructed especially for the purpose of cutting a way through heavy ice, and towing in the steamers plying to and from this port, Gothenburg's navigation would have been closed until late in the spring. Freights showed no perceptible change until summer, when they began to rise, steadily increasing, until in the autumn they stood at higher figures than had been known here for a decade.

Arrivals.—During the year there arrived at Gothenburg from foreign ports:

Class.	No.	Tonnage.
Steam-vessels.....	2,029	848,168.16
Sailing vessels.....	733	92,923.90
Total.....	2,762	941,092.06

This was 14 less steam-vessels and 86 more sailing vessels than during the foregoing year, with an increase in the tonnage of 10,944 tons, and the largest amount ever arriving here in any one year.

Clearances.—During the year there cleared from Gothenburg for foreign ports:

Class.	No.	Tonnage.
Steam-vessels.....	1,932	820,967.00
Sailing vessels.....	843	99,397.68
Total.....	2,415	920,364.68

This was a decrease of 24 steam-vessels and 75 sailing vessels, but an increase in the tonnage of 16,040.59 as compared with the preceding year.

Of all the vessels arrived and departed not one carried the American flag.

Number of vessels entered and cleared at Gothenburg during the past ten years, 1879-1888.

Year.	Entered.	Cleared.	Year.	Entered.	Cleared.
1879	2,026	1,859	1884	2,431	2,159
1880	2,231	2,125	1885	2,500	2,340
1881	2,114	2,096	1886	2,473	2,570
1882	2,411	2,202	1887	2,690	2,514
1883	2,486	2,347	1888	2,762	2,415

PRINCIPAL EXPORTS.

Iron and steel, the chief exports of the country, showed an increase of 4,130,107 kilograms; though, on the whole, the lessened demand, with the consequent lower prices, made another dull year for the iron industries. The cause of this diminishing requirement of the finer grades of Swedish iron is still attributed mainly to new methods of working iron, which make the former no longer so necessary for the purposes for which it was formerly indispensable.

The declared export of iron and steel to the United States during the year amounted to 22,866 tons, valued at \$943,931.50, as against 40,931 tons, valued at \$1,141,101.15, in 1887, showing a decrease of 18,265 tons and of \$197,169.65 in value.

Matches, which may also be reckoned among the principal exports of Sweden, after having fallen off somewhat in 1887, now show an increase of 753,914 kilograms.

Wood pulp seems to be fulfilling its promise of becoming one of the leading industries of the land, 29,680,624 kilograms having been exported in 1888, being an increase of 6,892,191 kilograms over the preceding year, which increase alone exceeds the entire amount exported a few years ago.

Butter is also one of the steadily increasing exports, having found an appreciative market in England. There has been a general movement to prevent the manufacture and importation of oleomargarine, as likely to damage the reputation and interfere with the sale of Swedish butter in the foreign markets. In 1882 3,542,232 kilograms were exported. In 1889 the amount was 6,903,452 kilograms, or double the figures first quoted, and 998,981 kilograms in excess of 1887. The exports of butter from Gothenburg during the years 1880-1888 were, as follows:

	Kilograms.		Kilograms.
1880	2,153,979	1885	5,042,966
1881	1,796,811	1886	5,178,700
1882	2,420,777	1887	5,904,471
1883	3,542,232	1888	6,903,452
1884	4,015,667		

PRINCIPAL IMPORTS.

As I have before stated, the greater part of the merchandise of United States production arrives here by the way of English, German, and other ports, and, in the official statistics, being accredited to the ports of re-exportation, it is impossible to show the amount coming from the United States. But, of importations possibly of American production, there was an increase of sirup, rice, cotton, and petroleum, though the increase in the latter could probably be attributed to a Russian source, while refined sugar, pork, wheat flour, and Indian corn decreased; Indian corn particularly showing a great fall-off, only 28,874 kilograms being imported, as against 2,999,948 the preceding year, and 4,929,167 in 1886; which was caused by the recent heavy import duty.

Importations at Gothenburg of breadstuffs during the years 1886 to 1888.

THE HERRING FISHERIES.

These, as in the foregoing year, were very successful. The fish began to appear in the waters along this coast as early as September, yielding large catches, and brought good prices.

The total catch amounted to about 54,000,000 kilograms, some 38,000,000 kilograms of which were exported, 50,000 barrels being shipped to German and Russian ports in the Baltic.

When these figures are compared with those of 1877, when only 22,567 kilograms of fresh fish of all kinds were exported, it will be seen to what importance the herring fisheries have attained. And could these immense quantities of fish be smoked and salted here, instead of being sent to other countries, to undergo these processes, or in unfavorable weather spoiling, and thereby becoming a total loss, as is frequently the case, a great industry might be developed, which would give remunerative employment to large numbers of people who now eke out a scanty existence.

ERNEST A. MAN,
Consul.

UNITED STATES CONSULATE,
Gothenburg, May 21, 1889.

SWITZERLAND.

REPORT BY CONSUL-GENERAL WINCHESTER, OF BERN.

The official statement has been published of the imports and exports of Switzerland for the calendar year 1888, showing the former to have been 675,729,477 francs (\$130,-415,788*), and the latter 636,636,327 francs (\$122,870,811*). This is an increase over 1887, in imports, of 32,697,747 francs (\$6,310,665*), and exports, 34,175,276 francs (\$6,553,828*).

In this connection the Swiss official financial journal presents some interesting statistics relative to the trade of the different countries in Europe. From this account it appears Holland does the largest amount of trade per head of population. The extent of the average Hollander's commercial operations during the year amounts to 1,012 francs (\$195*).

After Holland, though at some distance, comes Switzerland with 510 francs (\$98*) per head of population. England is third in the list with 421 francs (\$81*), while France and Germany average only about 100 francs (\$19*). The textile industry in its various branches, long retarded in Switzerland by cantonal customs duties restrictions, and the high protective tariffs of the surrounding states, has struggled under the most adverse conditions to a position of assured and steadily increasing importance and prosperity. This industry is mostly of a wholesale and export character.

* Reduced to United States equivalent in the Department.

Switzerland, with limited domestic and inland market, with a central continental position, with no sea-coast and without navigable streams to ocean ports, entirely dependent on land transportation, adding considerably to the cost of the imported raw material and the export of the finished product, was driven by the sharp industrial competition to seek a place in the world's markets with those products the value of which is high as compared with bulk and weight. According to the last census there were engaged in—

Silk Industries	63, 123
Cotton industry	42, 166
Embroidery industry	36, 724
Linen and part linen industry	10, 785
Wool and part wool industry	3, 492

To which might be added as auxiliary to the textile industry those engaged in chemical works numbering 10,046, making a total of 166,336 persons, comprising from one-fourth to one-third of the aggregate employed in all branches of industry. As represented in commercial statistics the textile industry for the last three years for which the figures have been given, in imports has been:

Year.	Articles.	Value.	Year.	Articles.	Value.

The export during the same period:

Year.	Articles.	Value.	Year.	Articles.	Value.
		<i>Francs.</i>			<i>Francs.</i>
1885.....	Cotton.....	157,000,000	1886.....	Wool.....	11,000,000
1886.....	do.....	161,000,000	1887.....	do.....	13,000,000
1885.....	Silk.....	169,000,000	1885.....	Cloths.....	4,000,000
1886.....	do.....	188,000,000	1886.....	do.....	5,000,000
1887.....	do.....	194,000,000	1887.....	do.....	6,000,000
1886.....	Linen.....	2,000,000			
1886.....	do.....	1,000,000	Total, 1885.....		343,000,000
1887.....	do.....	2,000,000	Total, 1886.....		366,000,000
1886.....	Wool.....	6,000,000	Total, 1887.....		373,000,000

The raw material for this textile industry is almost entirely imported, a very insignificant per cent. being produced in the country, and its growth may be shown in the importations for the following dates:

Articles.	1855.	1865.	1875.	1885.	1877.
	<i>Quintals.*</i>	<i>Quintals.*</i>	<i>Quintals.*</i>	<i>Quintals.*</i>	<i>Quintals.*</i>
Cotton.....	119,481	118,259	231,038	240,501	233,358
Raw silk.....	7,943	8,254	12,203	12,994	15,285
Flax, hemp, jute, &c.....	6,811	8,978	12,799	12,891	12,768
Wool.....	5,599	8,366	20,643	30,523	37,789

At first glance the silk industry, with its nearly 200,000,000 francs of exports in the year 1887, would seem to be entitled to the precedence in three industries, but a closer examination reveals the fact that the cotton textures have made a greater ratio of increase, the export of the same in 1887, of yarn and thread, amounting to about 20,000,-000 francs, texture about 140,000,000 francs, and embroidery about eighty-five to ninety

* Quintal metrical equals 220 pounds.

million francs. There has been during the last three years a marked decrease in the export of yarn as well as texture, and the Swiss cotton-spinning interest does not present a favorable outlook, attributed in part to provisions of commercial treaties and the competition, especially in threads, of English goods. The embroidery trade has tripled itself in twenty years, and in 1887 reached an export of nearly 90,000,000 francs.

One fact appearing in the general summing up of Switzerland status at the close of the past year, the statistics as to her newspaper and periodical publications is mostly of notice. Of these there are 766; to which might be added 36 official publications, bringing the total to 812. Zurich takes first rank, with 123 journals; but according to population she only occupies third place, leaving to Geneva and Basle the two first places. The population of Switzerland being in 1880 little less than 3,000,000; this gives an average of one journal for each 3,505 inhabitants. But above this average there are eight Cantons.

In the German language there are 491 papers, 229 in French, 17 Italian, 3 Romish, and 10 in different foreign languages (English, Polish, Russian, etc.), and, lastly, 26 papers on which are printed two, three, or four languages.

The oldest paper is the "Freitage Zeitung," which was founded in 1666. Ten newspapers appear twice a day and 66 are dailies.

BOYD WINCHESTER,
Consul-General.

THE UNITED KINGDOM.

ENGLAND.

REPORT BY CONSUL-GENERAL WALLER FOR THE YEARS 1887 AND 1888.

GENERAL TRADE REVIVAL.

The indications of a general revival of the trade and commerce of the kingdom, to which attention was called in the last annual consular report from this office, have been more than verified. Official and other returns clearly show a decided improvement in both the volume and character of the business done in 1888 over the year previous, and this increased prosperity, which promises to continue for some time to come, is not confined to any particular department of the trade or industry of the kingdom. This fact is shown by the statistical returns hereinafter given of exports and imports, of railway traffic, of agriculture, of finance and shipping, especially when such statistics are for the calendar as well as the fiscal year of 1888; and it is encouraging to observe that the prosperity of the year just ended is apparently due to legitimate trade and not to speculation; this improvement, although general, is more marked in some branches of trade than in others. This is notably so in ship-building, the total tonnage of ships built in 1888 never having been exceeded, except in two instances, in the whole history of the industry. The increase in the value of imports was $3\frac{1}{2}$ per cent. and of exports $4\frac{1}{2}$ per cent. over the year previous. The agricultural returns for 1888, although not as satisfactory as was anticipated in the earlier part of the year, considering the total produce and price obtained, are better than those of 1887.

LOCAL GOVERNMENT.

The local government act for England and Wales was the most important legislation of the year. This act is regarded as the first installment of local administrative reform. It is intended to bring under one central county authority all local matters. Hitherto county affairs have been managed by justices of the peace, appointed for life by the crown, the government of large towns being mostly in the hands of elected councilors of a municipal corporation. The act creates an entirely new elective body, to be called the county council, and vests in it the administrative (not the judicial) duties of the justices of the peace—such as the levying of a county rate, the maintenance of shire halls, lunatic asylums, industrial schools, roads and bridges, and revision of the Parliamentary Register. The council will also take additional duties, such as the appointment of coroners, while the management of the county police will be vested in a joint committee of the council and the justices of the peace. Provision is made permitting various imperial authorities to transfer to the county councils any administrative duties of a local character.

The members of the council are elected for a term of three years by the occupiers of any building, or of land of the annual value £10. The councilors elect the aldermen for the term of six years, either from their own body or without, the number of aldermen not to exceed one-third of the number of councilors, one-half of their number retiring triennially.

In addition to the council for each of the fifty-two counties, sixty-one boroughs, which have a population of 50,000, are made county boroughs, and are constituted in the same manner as the county councils.

Hitherto the imperial treasury has contributed to certain local expenses, such as disbursing half the pay and clothing of the police, but the county council will in future take this burden, and to meet this and other expenses the imperial treasury assigns to the counties 40 per cent. of the tax paid on the grants of probate of wills and letters of administration, also the revenue derived from liquor and other licenses. It is calculated that this arrangement will lighten the county rate at least $3\frac{1}{2}d.$ on each £1 of the assessed value of a holding.

The act makes London a county of itself, with one hundred and eighteen councilors and nineteen aldermen. The metropolitan board of works will cease to exist on the

operation of the act (April 1, 1889), and their duties will be performed by the new council. The act deprives the corporation of the city of London of the appointment of several officials, such as the judges of the city civil courts.

The councils will have power to borrow money for consolidating the county debt, purchasing land for administrative buildings, etc., and permanent works.

No person will be subject to a fine for non-acceptance of office, as he is under the municipal corporations of large towns. It is proposed by a subsequent act to make all local sanitary authorities subcommittees of the county council.

IMPORTS AND EXPORTS.

The total value of goods imported into the United Kingdom in 1887 was \$1,811,137,820, an increase of \$61,820,460, or $3\frac{1}{2}$ per cent. There was an increase in wool amounting to \$10,000,000, but a decrease in the weight of 16,500,000 pounds; an increase in corn of 15,000,000 hundredweights in weight and \$25,000,000 in value; in raw cotton, 700,000 hundredweights in weight and \$10,000,000 in value, and in coffee of 40,000 hundredweights in weight and \$5,000,000 in value; but there was a decrease in tea of 9,000,000 pounds in weight and \$7,500,000 in value.

The total value of exports was \$1,403,815,805, an increase of \$60,480,720, or $4\frac{1}{2}$ per cent. The increase in the value of British and Irish produce exported was \$44,907,160, or $4\frac{1}{2}$ per cent., and of foreign and colonial produce \$15,573,560 or $5\frac{1}{2}$ per cent., compared with 1886. The principal increases in British and Irish produce occurred in cotton manufactures, increase of \$10,000,000 in value; iron and steel manufactures, \$15,000,000 in value; woollen manufactures, \$5,000,000 in value; and machinery, \$5,000,000. In foreign and colonial merchandise exported the principal increases occurred in raw cotton, \$10,000,000; and wool, \$10,000,000. There was a decrease of \$3,000,000 in the value of tea and \$2,500,000 in the value of raw hides exported.

TRADE WITH THE UNITED STATES.

The total value of goods imported from the United States in 1887 was \$415,245,370, and exported thereto \$201,200,750, the balance in favor of the United States being \$214,044,620. In 1885 this balance was \$322,424,960; in 1886, \$273,876,805. The ratio of exchange was, in 1885, 4 to 1; in 1886, 3 to 1; and in 1887, a little more than 2 to 1. The imports from the United States into the United Kingdom for the year 1887 show an increase of \$7,244,385, or 1½ per cent., and the exports thereto of \$13,161,725, or 7 per cent. The principal articles imported from the United States are corn, which shows an increase in weight of about 3,000,000 cwts., in value \$15,000,000; raw cotton, which shows a decrease of 300,000 cwts., and \$700,000 in value; bacon and hams, which show a decrease in weight of 400,000 cwts., but an increase in value of \$125,000; and tobacco, which shows a decrease of 8,500,000 pounds in weight, and \$1,250,000 in value.

The principal articles exported to the United States are cottons, which show an increase in value of \$1,000,000; linens, \$1,000,000; metals, \$10,000,000, and woollens, \$500,000.

SHIPPING.

The official returns show that exactly the same number of vessels were built in 1887 as in 1886, viz, 736, but the tonnage built shows an increase of 45,670 tons.

The total number of vessels entering at ports in the United Kingdom in 1887 was 357,405 of 77,664,486 tons, of which 331,897 vessels of 68,076,174 tons were British; and the total number of vessels clearing was 319,024 of 71,978,474 tons, of which 293,885 vessels of 62,504,196 tons were British.

The number of vessels lost at sea in 1886 was 641 of 214,369 tons, as compared with 557 vessels of 217,191 tons in 1885. The number of persons lost by wreck and casualties was 1,336, a decrease of 95 compared with 1885.

Total number and tonnage of registered vessels of the United Kingdom, Isle of Man, and Channel Islands, which were employed in the home and foreign trade, and the number of persons (exclusive of masters) employed therein.

AGRICULTURE.

The returns for the United Kingdom show an increase in the total area under cultivation of 2,445 acres. Corn and green crops have each increased. Rotation grasses and permanent pasture both show a decrease. Cattle and sheep have each decreased, while pigs are greater in number.

The cold and wet spring and summer were disastrous to the corn-growers. The extent to which Russia last year displaced the United States as a supplier of wheat to this country is shown by the following figures:

Country.	Quantity.		Value.	
	1888.	1887.	1888.	1887.
Russia.....	<i>Oats.</i> 21,369,000	<i>Oats.</i> 5,523,000	\$40,490,000	\$9,965,000
United States	14,647,000	30,504,000	23,420,000	59,980,000

The changes which these figures show are due to the fact that, while the Russian crop was exceptionally large, the American crop was below the average. In addition to the decline in wheat, the imports of flour from the United States were also upon a decidedly smaller scale. Owing partly to an improved demand for meat and partly to the abundance of feed the value of cattle and sheep rose considerably during the summer. It has been estimated that cattle sold on an average during the year at \$10 each and sheep at \$2 to \$2.50 each more than in 1887.

The following tables give the total amount of land under cultivation and the total number of live-stock in the United Kingdom for 1888 compared with 1887:

Acreage.	1888.	1887.	Increase.	Decrease.

FISHERIES.

The general result for the United Kingdom, and allowing for Scotch and Irish salmon, is as follows:

Division.	Fish landed.	
	Weight.	Value.
England and Wales.....	Tons. 301,000	\$20,515,000
Scotland, excluding salmon.....	252,000	6,985,000
Scotland, salmon.....		1,435,000
Ireland, excluding salmon.....	45,000	1,580,000
Ireland, salmon.....		1,465,000
Total.....	598,000	31,950,000

Comparing the annual value of the sea fisheries of the countries where total values are given, viz: Norway (1886), \$8,190,000; Holland, about the same as Norway; France (1886), \$18,545,000; Canada (1886), \$19,460,000; United Kingdom (1887), \$31,950,000. Mr. Giffen, of the English Board of Trade, says: "The sea fisheries of the United Kingdom appear to be of greater value than the sea fisheries of any other country which publishes tolerably complete records, and probably of greater value than those of any other country in the world."

Comparison can not be made with the United States, as there does not appear to be any annual statistics of the fisheries of the United States as a whole, and no details of such fisheries in any form that could be compared with those given. The only general statement is one contained in the census of 1880, which does not include particulars as to the kinds of fish captured, nor state the value as landed, distinctly and separately.

The following tables show the quantity, value, and average price of fish landed on the English and Welsh and Scotch coasts in 1886 and 1887:

Comparative statement showing the total quantity, value, and average price of fish landed on the English and Welsh coasts in 1886 and 1887.

MINES.

As evidence of the improved condition of trade in this country it will be observed that the mineral production of 1887 exceeded that of 1886 by \$14,674,245 in value. The increase in the output of coal was 4,601,330 tons, valued at \$4,734,500, and of pig-iron 550,000 tons, in value \$7,500,000. Although the production of tin was 30 tons less than in 1886, the value was \$526,000 greater.

BANKRUPTCY.

The total number of receiving orders made during the year 1887, not including those rescinded before being proceeded with, was 4,839, as compared with 4,816 in 1886, the increase being 23, or about one-half per cent. The estimated liabilities have increased from \$39,569,355 to \$44,679,125, or nearly 13 per cent., but the estimated assets have decreased from \$14,275,800 to \$13,335,810, or nearly 7 per cent. The percentage of assets to liabilities has fallen from 36.1 per cent. to 29.8 per cent. The total amount of annual loss to creditors in England and Wales through bankruptcy proceedings for the year 1887 is estimated at \$35,574,525, against \$29,599,010 in the previous year, showing an increase of \$5,975,515.

The following table gives the number of bankruptcies, liquidations or schemes, and compositions, with the amount of liabilities and assets for the years 1885 to 1887 :

Number of bankruptcies, liquidations, and compositions, with the amount of liabilities and assets for the years 1884, 1885, and 1886.

REVENUE.

The gross public revenue for the year ending March 31, 1888, amounted to \$449,011,270, and the expenditure to \$437,118,225, leaving a surplus of \$11,893,045. The expenditure was less than in the year ending March 31, 1887, by \$12,865,535, and the income by \$4,852,520. The smaller expenditure was brought about by the reduction of the charge for the national debt of \$8,700,000; army, \$2,000,000; and navy, \$5,000,000; the lesser receipts by a reduction on the duty of tobacco producing \$2,500,000 less than in the previous year, and in the income tax producing \$10,000,000 less in the year. There was a decrease in the amount of revenue received from customs of \$2,776,995, but an increase in the revenue from excise of \$2,063,185, and from stamps of \$6,383,085.

The following table gives the gross amount of revenue collected from the customs, excise, and stamps in 1887-'88:

NATIONAL DEBT.

The total amount of national debt at the end of the financial years 1881 to 1888 was

Financial years ended March 31—	Funded debt.	Capital value of terminable annuities.	Unfunded debt.	Total of national debt.
1881.....	\$3,545,362,636	\$174,942,176	\$110,887,500	\$3,830,722,305
1882.....	3,547,492,735	165,909,376	90,038,500	3,803,440,610
1883.....	3,563,484,970	137,854,880	70,927,000	3,772,276,850
1884.....	3,203,155,475	458,411,345	70,553,000	3,732,119,820
1885.....	3,200,909,480	430,578,280	70,166,500	3,701,653,370
1886.....	3,194,248,470	429,149,585	88,014,000	3,711,412,055
1887.....	3,188,168,200	405,615,740	87,689,500	3,681,393,440
1888.....	3,048,703,715	302,246,150	86,925,500	3,527,875,365

The remarkable financial transaction of the year was the act of Mr. Goschen, chancellor of the exchequer, converting the national debt from a series of 3 per cent. stocks into a consolidated stock, bearing for fourteen years from April 1, 1889, 2½ per cent., and afterwards 2½ per cent.

The act provides for the creation of new stock, yielding dividends up to April 1, 1889, of 3 per cent., and thereafter 2½ per cent., until April 1, 1903, and thereafter 2½ per cent. stock not to be redeemable at par value.

The whole of the old 3 per cent. stock, which amounted to \$2,963,091,420 on March 31, 1888, has been converted into the new stock, with the exception of \$211,625,865, which balance will probably be paid off by an issue of terminable annuities or by a fresh creation of new consols, so that the national debt will presently consist of one stock. The immediate relief to the exchequer will begin to be felt in the year 1889, by a reduction of interest on the debt amounting to \$6,425,000 yearly.

POST-OFFICE.

The following table shows the estimated number of letters, etc., delivered in the United Kingdom during the twelve months ended March 31, 1888:

Description.	Number.	Increase per cent.	Average number to each person.
Letters.....	1,512,200,000	3.6	41
Post cards.....	188,800,000	4.8	5
Books, packets, and circulars.....	389,500,000	5.6	10
Newspapers.....	152,800,000	.8	4
Total.....	2,242,800,000	3.8	60
Parcels.....	86,732,000	11.8	1
Grand total.....	2,279,532,000	3.9	61

Of the total number of letters, etc., delivered, about 85 per cent. were delivered in England and Wales (28 per cent. being delivered in the London postal district), 9 per cent. in Scotland, and 6 per cent. in Ireland.

Three hundred and ninety-six new post-offices were opened during the year.

The parcel post business has increased largely. The total number of parcels posted during the year was 36,731,786.

The following table gives a comparison between the business conducted in 1884-'85 (when it was established) and 1885-'86, 1886-'87, and 1887-'88:

Year.	Number of parcels railway-borne and road-borne.	Postage.			Average postage per parcel.	
		Gross amount.	55 per cent. on railway-borne parcels paid to railway companies.	Post-office share.	Gross.	Post-office share.
					<i>Cents.</i>	<i>Cents.</i>
1884-'85	\$22,910,040	\$2,541,235	\$1,282,860	1,258,375	10.64	5.26
1885-'86	26,417,397	2,959,725	1,494,740	1,464,985	10.72	5.32
1886-'87	32,660,154	3,595,590	1,791,270	1,804,290	10.50	5.28
1887-'88	36,731,786	4,068,820	2,006,475	2,052,345	10.60	5.36

NOTE.—The charges for transmitting parcels were reduced in 1886.

It will be observed that the amounts earned by the railway companies were larger in the years 1884-'85 and 1885-'86, and smaller in 1886-'87 and 1887-'88, than those earned by the post-office. This change is due to the extension of the road-borne system of collecting and delivering parcels by wagons. A parcel service by coach between London and Brighton (a distance of 52 miles) was established in 1887, and this has been so satisfactory that it is intended to extend the system in other directions.

The number of letters, post cards, parcels, etc., received in the returned letter office was 13,436,600 of which number 412,122 were unreturnable. There were 25,726 wholly unaddressed, 1,533 of which contained money, checks, etc., amounting to \$35,555.

The number of accounts remaining open at the end of the year 1887 in the Post-office Savings Bank was 3,951,761, distributed as follows:

Division.	No.	Proportion to population.	Average balance due to each depositor.
England and Wales	3,653,232	1 to 8	\$66.46
Scotland	139,681	1 to 29	29.80
Ireland	158,848	1 to 31	29.84

A peculiarity of the above is that while in Ireland the number of accounts open is only in the proportion of 1 to 31 of the population, the balance due to each depositor is much larger than in the other two sections of the Kingdom.

The gross revenue for the year was as follows:

Receipts.		Expenditures.	
Postage	\$42,046,060	For postal service, including money and postal-order business	\$26,810,975
Commission:		For packet service	2,896,123
On money orders	667,230	For savings bank	1,423,090
On postal orders	799,395	For telegraphs	9,965,836
Value of unclaimed money orders	14,000		
Savings bank	1,836,115	Total	41,067,025
Telegraphs	9,960,925	Net revenue	14,256,790
Total	55,323,725		

RAILWAYS.

The general report of the board of trade on the traffic and working of railways for 1887 shows an improvement as compared with 1886, the net earnings, amounting to \$169,400,550, being larger than they have ever been before. The increase in the receipts from passenger traffic was \$1,500,000 and from goods traffic \$5,000,000. The increase in the number of passengers carried was upwards of 8,000,000, and the increased weight of goods was over 14,000,000 tons. The working expenses show an increase of about \$2,500,000, but the total working expenses, amounting to \$185,316,330

in 1887, compare favorably with those of 1886, there being as light decrease in the expenditures per train mile. The decrease in the working expenses per train mile has been continuous for several years, amounting in the last ten years to 11 cents per train mile, or about 15½ per cent.

The increase of capital amounted to upwards of \$38,000,000, the total nominal capital being \$4,229,858,270. The average dividend on the total paid-up capital in 1887 was at the rate of 4.13 per cent., an increase of .06 per cent. compared with 1886.

The number of persons killed in the working of the railways was 919 and the number of injured was 3,590. Of these numbers, 121 killed and 1,297 injured were passengers, but of these only 25 were killed and 538 injured in consequence of accidents or collisions between trains. Of the remainder, 422 killed and 2,075 injured were officers or servants of the companies. Of suicides there were 70; of trespassers, 203 were killed and 114 injured; accidents at level crossings, 63 killed and 35 injured; other causes, 40 killed and 35 injured.

The amount of compensation paid by railway companies of the United Kingdom for personal injuries to passengers and for loss or damage of goods was as follows:

Division.	1886.		1887.	
	Passengers.	Goods.	Passengers.	Goods.
England and Wales	\$750,040	\$783,540	\$742,425	\$760,965.
Scotland	70,485	68,385	55,565	68,000
Ireland	184,920	27,870	84,040	23,200
Total	955,445	829,775	882,030	848,165

TRAM-WAYS.

The total length of line open in the United Kingdom in 1887 was 886 miles, an increase of 21 miles over 1886. The paid-up capital amounted to \$64,536,000 and the gross receipts for the year to \$14,011,620. The average return upon the capital expended was about 5½ per cent., as against 5 per cent. in 1886. The following table gives the length, paid-up capital, traffic, receipts, and expenditures on tram-ways in the United Kingdom for 1887 compared with 1886:

Total length, paid-up capital, traffic, receipts, and working expenses of tram-ways in the United Kingdom.

POPULATION.

The return of the registrar-general of births, marriages, and deaths for 1887, completes fifty years of registration. The act establishing civil registration of births, deaths, and marriages came into operation July 1, 1837. The history of this act is of interest. It was not passed without considerable opposition, emanating chiefly from the clergy, among them being the then archbishop of Canterbury, who contended that the uneducated classes would be led by it to neglect baptism, but who were, probably,

more particularly influenced by the fact that the fees payable for certificates of baptisms, burials, or marriages would henceforth be diverted from the guardians of the parish registers to the general register office, or the local registrars.

On the other hand, the medical and legal professions were both in favor of the measure. The anticipated benefits likely to result from the registration of the causes of death to the medical profession, in the language of a circular issued by the presidents of the Royal Colleges of Physicians and of surgeons and the master of the society of apothecaries, was "a more accurate knowledge, not only of the comparative prevalence of various mortal diseases, as regards the whole of England and Wales, but also of the localities in which they respectively prevail, and the age, sex, and condition of life which each principally affects," and it was through knowledge thus obtained by the accumulation and classification of registered facts that the excess of mortality from certain forms of diseases was almost invariably associated with certain ascertainable external conditions, and that sanitary reformers were able to devise remedial measures and to bring them to bear on unhealthy localities with such precision as to give a fair chance of success. "But," the registrar-general says, "it may be pointed out that a far greater benefit than any foreseen by the medical authorities, as fairly to be anticipated from a system of registration, has in reality already been obtained from it, namely, an addition of more than two years to the average span of life of the inhabitants of England and Wales."

The act commended itself to the legal profession because of the facilities afforded in cases of uncertain or disputed inheritance, where it was necessary to trace back pedigrees and prove the occurrence of either births or deaths. In confirmation of this, it is pointed out that in 1887 there were no less than 37,168 searches in the registers kept in the general register office and 27,110 certificates issued, mostly for legal purposes and that each of these searches cost the searcher, on the average, only ten minutes in time and 1s. (25 cents) in money, instead of "the immense delay and expense of going all over the Kingdom to find, in the majority of cases, the search to be after all unsuccessful," as an eminent lawyer said in the debate on the act.

The births registered in 1887 numbered 896,331, and were in the proportion of 31.4 to 1,000 persons living, the lowest rate recorded since registration was instituted.

The deaths numbered 530,758, a proportion of 18.8 to 1,000 persons living, the lowest death-rate yet recorded, the next lowest having been 18.9 in 1881.

The following table gives the registered causes of death :

Mortality from the several classes of diseases in 1887.

Causes of death.	Total deaths in 1887.	Rate per million living.							Mean 1871-80.

The marriages registered in 1887 numbered 200,518, giving a rate of 14.2 persons married to 1,000 living, the lowest rate recorded since civil registration began, with the exception of 1886, when it was 14.1. The following table gives the ages of 188,164 couples at time of marriage:

Ages of 188,164 of the men and women who intermarried in the year 1887.

[The table read vertically shows the number of wives at each age, with the ages of their husbands at marriage. Read horizontally it shows the number of husbands at each age, with the ages of their wives at marriage.]

EMIGRATION.

The total number of persons emigrating from the United Kingdom in 1887 to all parts out of Europe was 396,494, of whom 281,487 were of British and Irish origin. Deducting the number of immigrants, 119,013 (85,475 of whom were of British and Irish origin), it will be found that the net emigration was 277,481.

Of the total British and Irish emigration 60 per cent. were English, 12 per cent. Scotch, and 28 per cent. Irish. Of the whole number of British and Irish 72 per cent. went to the United States, 12 per cent. to the Australasian colonies, and 11 per cent. to British North America. Of the English emigration, 63.6 per cent., and of Irish, 87.6 per cent. was to the United States.

The following interesting table, compiled from the census returns of the United States, Canada, and the Australian colonies by the board of trade, shows the number of persons born in the United Kingdom, forming part of the population of the countries mentioned:

Table showing the number of persons born in the United Kingdom, forming part of the population of the under-mentioned countries.

CRIMINAL STATISTICS.

There has been a continuous decrease in all parts of the Kingdom in the number of persons committed for trial during the last decade. In 1878 the total number was 23,477, or 1 in every 1,446 of the population; in 1887 the number was 18,305, or 1 in every 2,025 of the population. This satisfactory diminution in crime is undoubtedly the result of the spread of education among the masses. This is particularly shown in the statistics giving the number of persons summarily proceeded against. The total number for England and Wales was 663,837, of which 134,501 were acquitted, 382,553 fined, and the remainder sentenced to short terms of imprisonment or sent to reformatories. Of all the prisoners, 43,366 of them could neither read nor write, 116,060 could read or write imperfectly, 3,575 could read and write well, and 115 were of "superior education." The cases of drunkenness show a continuance of the falling off observed in recent years, the number having decreased from 165,139 in 1886 to 162,772 in 1887.

In Ireland 47 per cent. of the women prisoners and 30 per cent. of the men were unable to read or write.

The total number of police in the United Kingdom in 1887 was 54,781, costing \$28,285,140, an increase of 553 men and \$921,525 compared with 1886. The proportion of police to the population was in England and Wales 1 in 735, in Scotland 1 in 1,026, and in Ireland 1 in 346.

PATENTS.

The number of applications for patents in 1887 amounted to 18,051, an increase of 5 per cent. over 1886, and exceeded the number applied for in any previous year. The proportion of applications made by persons resident in the United Kingdom amounted to 76 per cent., from persons resident in the United States to 9 per cent., and from other countries to 15 per cent. Of the applications of the year 1886, 53 per cent. were proceeded with, as compared with 54 per cent. in 1885.

The following table shows the number of applications for patents from persons residing in the United Kingdom and in various countries and colonies in the years 1884 to 1887, inclusive:

Applications for patents, 1884-'87.

THOMAS M. WALLER,
Consul-General.

UNITED STATES CONSULATE-GENERAL,
London, January 31, 1889.

FALMOUTH.

REPORT BY CONSUL FOX FOR THE YEAR ENDED SEPTEMBER 30, 1888.

THE PILCHARD FISHERY.

The past season, 1887-'88, was marked by one of the smallest catches of pilchards for many years, the total quantity secured being only about 8,000 hogsheads. This is a striking contrast to the previous season, when just three times this quantity was landed, viz: 23,500 hogsheads. It is noteworthy that not a single hogshead was secured by the seine-boats, all the fish having been obtained by the drift-net boats.

The seining industry has been declining for many years, but this is the first time within recollection that such a record as this is shown.

The exportations of pilchards to Italy consisted of 10,447 hogsheads. This included a large quantity remaining over from the previous season. About 700 to 900 hogsheads of this past season's catch also remain over in England and Italy to await the approaching season.

Messrs. G. C. Fox & Co.'s annual circular (dated Falmouth, May 3, 1888) contains the following pilchard statistics:

"Last year we had to record the largest catch for fourteen years; now we must report one of the smallest catches for many years. On a previous occasion we called attention to the decadence of the seine fishery, but for the first time within our knowledge a season passed without any pilchards being caught by seines. This industry belongs chiefly to West Cornwall.

"The season began with an estimated stock in Italy and on this side of 4,000 to 4,500 hogsheads. The low prices at the close of the previous season tended to lessen the quantity of summer fish caught and cured in 1887, which was only about 1,300 hogsheads, and sold at \$10.20 to \$10.95 per hogshead to curers. As October and November passed without the usual good catches, a rush was made by dealers in November to obtain fish, and \$19.46 to \$20.67 to curers was freely paid, and even \$21.90 and more was given. Prices soon after fell in Italy, and during December and January declined on this side to \$14.60 per hogshead to curers.

"The total catch this season was about 8,000 hogsheads, of which 200 to 300 hogsheads remain in pickle in Italy and 500 to 600 hogsheads on this side. Nearly all this season's fish were pickled and packed in half-hogsheads."

MINES AND MINERALS.

Mines.—Cornish mining, as compared with late years, has been fairly brisk, owing to the high price of tin and copper.

I transmit particulars of the produce of the mines, etc., of Cornwall for the year ending December 31, 1887. No later returns are published:

Arsenic and arsenical pyrites.—The total quantity obtained was 1,763 tons, and the value of same at the mines was \$49,730.75.

China clay and China stone.—The total quantity obtained was 314,790 tons, and the value of same at the open works was \$1,148,936.85.

Copper ore dressed.—The total quantity obtained was 3,415 tons, and the value at the mine \$49,000.78. The amount of metal obtainable by smelting was 358 tons.

Copper precipitate.—The total quantity was 6½ tons only, and the value at the mine \$389.32. The amount of metal obtainable by smelting was 2½ tons.

Manganese ore.—The total quantity obtained was 387 tons, and the value at the mine was \$5,124.42.

Slates and slabs.—The total quantity obtained was 12,641 tons, and the value of same at the mines and quarries was \$121,818.22.

Tin.—Tin ore, dressed, obtained from the mines, amounted 12,740.14 tons, valued at the mines at \$3,939,145.96. Tin ore obtained from open works amounted to 63.6 tons, valued at the works at \$17,908.72. Tin ore obtained from foreshores and from the refuse of dressing floors amounted to 1,278.11 tons, valued at the works at \$287,580.95.

The quantity of tin obtained from the three above-mentioned quantities by smelting was 8,406 tons 4 cwt., 41 tons 10 cwt., and 767 tons 2 cwt., respectively, making a total of 9,214 tons 16 cwt.

Tungstate of soda.—Only 1 ton was obtained, and its value at the mine was \$116.79.

Wolfram.—The total quantity obtained was 54 tons, and the value of same at the mines was \$6,175.58.

Zinc ore.—The total quantity obtained was 649 tons, and the value of same at the mines was \$3,873.72.

The amount of zinc obtained by smelting was 228 tons.

FALMOUTH AS A PORT OF CALL.

Following is a return of vessels of all nations arriving at Falmouth during the year ending December 31, 1887, exclusive of ships of war and coasters:

Nationality.	Number of ships.	Tonnage.	Nationality.	Number of ships.	Tonnage.
British	634	485,227	Russian	9	5,192
Norwegian	195	78,948	Spanish	8	5,268
German	170	84,416	Brazilian	3	1,684
Italian	109	63,218	Greek	2	633
Danish	78	17,405	Belgian	1	1,605
Swedish	48	18,220	Argentine	1	440
French	35	27,799	Turkish	1	432
Dutch	35	15,290	Portuguese	1	420
Austrian	17	10,324	Mexican	1	201
American	11	13,998			
			Total	1,359	840,630

The number of such arrivals during 1886 was 1,530, with an aggregate tonnage of 979,721. The present return therefore indicates a falling off of 171 in the number of ships and of 139,091 in the tonnage.

In 1886, 17 American vessels, with an aggregate tonnage of 23,454, arrived here. It will thus be seen that by the present return there has been a decrease of 6 ships, with a tonnage of 9,456.

IMPORTS.

The imports from the United States in three British vessels amounts to 1,846 tons, and consisted of phosphate rock, flour, and timber.

For a similar period last year, viz, October 1 to September 30, the number of such vessels was the same, but their tonnage amounted to 4,364 tons.

Complete details of the imports from countries other than the United States can only be obtained from the customs, who will not supply them without payment. I have, however, collected the following particulars, which will afford a general idea of this subject.

I am unable to obtain information of a similar character in respect to such imports in other parts of my consular district.

Cargoes.	Whence imported,	Number of vessels.
Oxen, eggs, onions, and copper pyrites.....	Spain	59
Wheat, tin ore, phosphate, and onions	France	9
Oats, barley, and maize	Russia	8
Wheat, oats, barley, and potatoes	Germany	5
Timber	Norway	8
Oats, timber	Sweden	8
Sugar	Holland	3
Maize, bones, and timber	Argentine Republic	3
Phosphate rock	Hayti	2
Bones	Brazil	1
Salt	Portugal	1
Phosphate	Belgium	1
Maize and barley	Roumania	3
		111

The number of vessels for the corresponding period last year (October 1 to September 30) was 96.

Value of declared exports from the consular district of Falmouth to the United States during the four quarters of the year ending September 30, 1888.

Articles.	Quarter ending—				Total for the year
	Dec. 31, 1887.	Mar. 31, 1888.	June 30, 1888.	Sept. 30, 1888.

Decrease	\$1,411.62	13,029.87

THE HARVEST.

The harvest is nearly completed in this district. We have experienced a very wet summer, consequently the grain crop is below the average, whilst, on the other hand, straw is above the average.

The root crop promises to be a heavy one.

The unbroken period of fine weather which has extended over the past three weeks has been most welcome to farmers and agriculturalists generally, and has enabled most of them to complete their respective harvests.

HOWARD FOX,
Consul.

UNITED STATES CONSULATE,
Falmouth, October 1, 1888.

LEEDS.

REPORT BY CONSUL WIGFALL, OF LEEDS, FOR THE YEAR 1888.

In transmitting form D (exports declared for the United States) with tabulated statement of exports for the Leeds consular district for the year ending September 30, 1888, I beg leave to submit the following summary view of the trade conditions now obtaining here.

Examination of the figures afforded by Form D for a series of five years last past shows some results set forth below :

Number of invoices certified each year, stated in the order of the annual numbers.

Year ending September 30.	Leeds.	Huddersfield.	District.
1888	1,710	2,248	3,958
1887	1,636	2,231	3,864
1886	1,492	2,229	3,703
1884	1,472	2,101	3,593
1885	1,099	1,684	2,783
Five years	7,409	10,493	17,902

Declared value of invoices in order of annual amounts.

Year ending September 30.	Leeds.	Huddersfield.	District.
1888	\$2,054,953	\$3,924,089	\$5,921,450
1887	1,930,260	3,866,497	5,854,349
1886	1,848,313	3,761,841	5,403,708
1884	1,642,367	3,331,193	5,179,506
1885	1,297,645	2,586,401	3,884,046
Five years	8,773,538	17,469,521	26,243,059

Average value per invoice in order of annual averages.

Year ending September 30.	Leeds.	Huddersfield.	District.
1886	\$1,239	\$1,746	\$1,507
1888	1,202	1,735	1,503
1885	1,181	1,686	1,459
1887	1,180	1,586	1,442
1884	1,116	1,536	1,396
Average 5 years	1,181	1,665	1,466

In the series of five years here represented the present year, 1888, shows largest in number of invoices certified for the whole consular district, and largest also in amount of declared value, but second only in average value per invoice, both of the latter items being also for the whole district.

For the Leeds office alone the present year is first in number of invoices and first in amount of declared value, but second in average value.

The Huddersfield agency gives the present year third place in point of number of invoices, and second place each for total declared amount and for average value per invoice.

In the annual report made from this consulate in 1885 a check in the decline of exports hence to the United States was alluded to as having come about during the then current year, and a slight tendency toward upward movement was noted. This proved the precursor of a turn in the tide which was marked in my report of August 17, 1886, as possibly then about to take place, if not having already occurred. The subsequent course of events has been consistent with these indications, and report has been made upon their progress accordingly. In the annual statement for last year the fact was adverted to that the revival in trade continued to gain strength, and that extensive changes of condition, when such should come about, might reasonably be expected to occur in the direction of improvement.

Such has unmistakably been the case, and the current of commercial prosperity seems now to have set forward broadly and boldly throughout England.

Every trade has begun to feel the stimulating effect, and while the labor strikes taking place and threatened in different quarters are to be interpreted as evidence of the growing belief in the advent of better times among the wage-earning classes, this witness is strengthened by the wide-spread success which the demands of the workmen have met with; by the voluntary advances made in some instances by employers; and also by the difficulty of inducing united action in the way of short time when such is attempted, which has, for example, been experienced in the neighboring district of Lancashire with the effort to curtail cotton consumption.

A notable feature in the general business of the kingdom has been the organization of stock companies, of which the creations for the year were reported last month to have reached £130,000,000 since the first of the year; an increase over the same period of the year before amounting to about £53,000,000. Further activity was then expected; nor has the expectation been disappointed.

The comparative failure of the harvest is commented on as tending to increase distress among the laboring classes; but its effect will probably be local only, and be more than compensated, as regards the mass of the population, by the improved condition of the converting trades, whose influence in England so much outweighs that of the agricultural industries. The increase in the price of grain itself will, in all likelihood, more than make up for any deficiency in yield; and in some of the minor crops, indeed, there is no room for complaint even as to quantity. Good planting prospects for the coming wheat crop are announced, with the possibility of increased acreage.

Taking the prospect as a whole there is every sign that England has fully entered on a period of commercial prosperity which is well founded and likely to continue. Values have touched bottom in land, money, and products; and barring the maleficent influence of undue speculation, there should be a series of good years for all branches of industry.

F. H. WIGFALL,
Consul.

UNITED STATES CONSULATE,
Leeds, October 29, 1888.

LIVERPOOL.

REPORT BY CONSUL RUSSELL FOR THE YEAR 1887.

I have the honor to transmit herewith the annual commercial report for the year 1887, accompanied by twelve tables of statistics relating to the navigation, commerce, etc., of this port.

IMPORTS.

The value of foreign and colonial imports amounted to \$449,501,944, which exhibited the marked increase of \$17,292,779 compared with 1886.

AMERICAN PRODUCTS.

From merchants and others of high standing who handle largely American products, I am enabled to give the movement of the chief products which ruled at this market during the year.

Wheat.—At the opening of the year [average Californian was selling at \$1.83 per 100 pounds, very little variation occurring until the middle of May, when it was \$1.94, which was the highest price reached during the year. A sharp decline then occurred, and continued until the 30th of August, the price then being \$1.46. Several advances occurred during October and November, which carried the price to \$1.70, which was the price at the close of the year. The price of No. 2 spring wheat at the opening of the year was \$1.82 per 100 pounds, from which time until the beginning of June there was little variation. A decline in price then occurred and continued until the end of August, carrying it down to \$1.46. From this time until the end of the year there were several increases which carried it to \$1.70.

Mixed corn.—At the opening of the year mixed corn was quoted \$1.09 to \$1.15 per 100 pounds. Very little variation occurred until the end of March, when the price fell to 99 cents, which was about the average until the end of July, when a series of increases commenced and continued until the 6th of December, when it was \$1.27 to \$1.33, which was the highest point reached during the year, the price at the close of the year being \$1.21 to \$1.27.

Linseed cake.—The year opened with linseed cake selling at \$34.06 per ton, and continued until the 22d of February. A series of decreases then commenced, which carried it down to \$26.76—\$37.98 on the 28th of June. An advance of \$1.21 per ton occurred during July, from which time until the end of October there was very little variation. One or two advances in November carried it to \$31.62, which was the price at the close of the year.

Bacon.—The imports of bacon and hams amounted to 2,409,447 cwt., and compared with 1886 exhibits a decrease of 242,254 cwt. The following table shows the opening and closing prices of the year :

Description.	Opening of the year.	Highest.	Lowest.	Close of the year.
Short rib bacon	\$9. 11	\$11. 43	\$8. 75	\$9. 97
Short clear bacon	8. 38	10. 46	8. 28	10. 07
Long clear bacon	8. 14	10. 46	8. 14	9. 36

Lard.—The total import of lard amounted to 636,665 cwt., which compared with 1886 exhibits an increase of 45,698 cwt. The year opened with the price at \$8.63, which fell on the 14th of January to \$8.51. Several advances then occurred and continued until the 11th March, when it reached \$9.60. From this time until the beginning of June several decreases occurred which carried it down to \$8.28. Very little variation then occurred until the middle of October, when a series of increases commenced and continued until the close of the year, the price then being \$9.73.

Cotton.—The total import of raw cotton amounted to 14,301,496 cwt., and compared with 1886 exhibits an increase of 278,801 cwt. The year opened with good demand at hardening rates, middling boweds selling at 10.77 cents, good fair Dhollerah, 8.11 cents, and good fair Egyptian, 13.18 cents. The highest point of the market for American cotton during the year was on the 9th and 16th of June, when middling boweds was quoted at 12.17 cents, and the lowest on the 3d of February, when it was

quoted at 10.39 cents. The average value of middling boweds for the year was 11.15 cents. The following table shows the average value of American and other cottons during the years 1886 and 1887 :

Year.	Middling Orleans.	Middling Texas.	Middling Boweds.	Fair Pernams	Good fair Egypt.	Good fair Dholleraa	Good fair Oomra.
	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
1886	10.52	10.52	10.39	10.77	13.06	7.98	7.78
1887	11.28	11.15	11.15	11.28	14.19	8.11	8.11

Petroleum.—With an exceptionally low stock of refined oil, the market opened in January at 14.70 cents for favorite brands, advancing before the middle of the month to 15.20 cents, and then declining, owing to arrivals, to 14.93 cents, and, with further arrivals, at the end of the month to 14.19 cents. The supply, however, continued small until the end of March and this price was firmly maintained until early April, when the market gave way and declined to 11.91 cents, remaining thereat, with slight variation, until early in May, when a further fall to 11.66 cents followed, and at this the market remained almost stationary for four months.

The improvement in the American market, which set in in August, soon reacted upon this market, and in September prices advanced to 12.04 cents, declining again before the end of the month to 11.91 cents. From the middle of October, however, when an upward movement, starting at 12.01 cents was commenced, prices continued steadily to advance to the end of theyear, 12.68 cents being reached at the end of October, 12.93 cents during the latter half of November, 13.18 cents early in December, and 14.19 cents at the close of month. Russian oil during the year has ruled at from 1.01 cents to 2.03 cents per gallon below these prices. The whole of the Russian oil imported last year was carried in bulk, in tank steamers, the barrels being filled alongside, and this mode of importation is now by those in the trade pronounced a complete success.

American timber.—The imports of pitch-pine exceeded that of the previous year by 40 per cent., but has been less than the average of the three preceding years by 15 per cent. The consumption kept pace with the import, leaving the market moderately stocked. The year commenced with light stocks and a low range of prices. As the autumn advanced shippers made a determined effort for higher prices, which was not responded to until great activity was developed in the northern ship-building centers; this resulted in numerous sales at advanced rates. Deals and planks, I am informed, are at all times dull of sale here and very few suffice for the limited requirements of the market. Oak in the log was imported to a larger extent than in the previous year and consisted chiefly of large parcels from New Orleans and Mobile, which went mostly into consumption at fair rates, though considerably under the price of Canadian wood. Some small lots imported from Baltimore being of good quality, realized full prices.

In wagon scantling a very extensive business was done, the import being the largest on record. In the early part of the season the demand was active and prices steady, but later supplies became excessive, and prices declined. Of wainscot billets there was no import, the demand having almost died out. Walnut was imported to a moderate extent and the demand was fairly steady, and most of the imports were disposed of without much fluctuation in price. Satin walnut (gumwood) was imported freely and at first went into consumption at good prices, but later on the supply overtook the demand and prices fell, the value at the close of the year being about 48 to 54 cents per cubic foot. Whitewood was imported to a larger extent than in any previous year. This wood I am informed has considerably increased in favor and prices have been fairly steady, ruling at from 44 to 54 cents for prime large-sized logs and 40 to 48 cents for planks. Ash was imported to a limited extent and realized about 42 cents per cubic foot. The import of cherry wood was small and very little in demand.

Tobacco.—At the opening of the year the tobacco market was very depressed, indeed almost lifeless, and continued in this condition until the end of April, when a ray of hope sprang from the announcement that a reduction of 8 cents per pound duty would be made. The restriction of moisture in the manufactured article to a maximum of 35 per cent. was also encouraging, as it foreshadowed an increased demand for the raw material, and besides appears to have met with the general approval of the trade; latterly, however, I am informed, there appeared signs of change of feeling, owing to the difficulty of manufacturing, so as to keep within the strict letter of the law, as well as to the constant inspections, testings, warnings, and prosecutions on the part of the excise. The following table shows the price of American tobaccos in bond for the past five years during the month of December in each year :

Description.	December, 1887.	December, 1886.	December, 1885.	December, 1884.	December, 1883.
	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
Virginia leaf	6 to 86	6 to 28	6 to 30	6 to 30	8 to 28
Virginia strips	11 86	8 28	11 32	13 36	12 36
Kentucky and Western leaf	9 20	6 20	8 20	10 24	8 24
Kentucky and Western strips	10 28	8 24	11 30	13 30	12 32
Maryland and Ohio's	12 18	10 18	12 18	14 18	12 18

The exports of American tobacco for Liverpool during 1887 were as follows:

	Hogsheads.		Hogsheads.
Africa	2,284	Jersey	14
Malta	107	Adelaide	13
New York	101	Guernsey	10
Isle of Man	66	Antwerp	10
Rotterdam	66	Tobago	5
Melbourne	65	Montevideo	4
Newport News	57	Natal	2
Bordeaux	5	Bremen	1
Gibraltar	4		
Sydney	55	Total	2,923
Christiana	44		

BANK RATES.

The Bank of England rate of discount, which at the opening of the year was 5 per cent., decreased on the 3d of February to 4 per cent., on March 10 to 3½ per cent., on March 24 to 3 per cent., on April 4 to 2½, and again on April 28 to 2 per cent., at which rate it remained until August 4, when it increased to 3 per cent., and again on September 1 to 4 per cent.; which was the rate up to the close of the year.

EXPORTS.

The exports of the produce of the United Kingdom amounted to \$444,358,970, and exhibited the marked increase of \$26,256,524 compared with 1886.

Table No. 3 shows the quantities so exported and the fluctuations therein compared with 1886, from which it will be observed that the principal increases are cotton yarn, 6,465,600 pounds; all sorts of cotton manufactures (other than piece goods), \$2,116,015; linen manufactures (piece goods), 2,832,500 yards; machinery and mill work of all sorts, \$2,765,315; woolen and worsted coatings and stuffs, 3,755,700 yards; silk manufactures of all sorts, \$1,096,654; haberdashery and millinery, \$539,193; hardware and cutlery (unenumerated), \$546,478; flannels and carpets, 903,400 yards. The principal decreases occurred in cotton manufactures (piece goods), 10,195,100 yards; jute (piece goods), 4,290,400 yards; jute yarn, 2,124,300 pounds, and wool and worsted yarn, 1,538,100 pounds.

Table No. 4 shows the quantities of foreign and colonial produce exported during the years 1886 and 1887, and the fluctuations in the export of each product.

Table No. 5 shows the description and value of the declared exports from this consular district to the United States during the year ending June 30, 1888, to be \$33,987,908.90, an increase of \$2,301,684.87 on the previous year.

NAVIGATION AND SHIPPING.

The annual statement of the navigation and shipping of the United Kingdom (a Government publication) shows that during 1887 (see Table 6) there entered this port from foreign countries and British Possessions 4,477 vessels of 5,186,393 tons, of which 1,350 of 935,315 tons were sailing, and 3,127 of 4,251,078 tons, steamers; and there cleared 4,005 vessels of 4,758,825 tons, of which 1,298 vessels of 946,339 tons were sailing, and 2,707 vessels of 3,812,186 tons were steamers.

There also entered in the coastwise trade 13,342 vessels of 2,754,405 tons, of which 3,408 vessels of 410,792 tons were sailing, and 9,934 vessels of 2,343,613 tons, steamers.

These figures compared with 1886 show an increase in arrivals from foreign countries and British Possessions of 110 vessels or 168,578 tons, and in the clearances a decrease of 14 vessels, with an increase of 44,171 tons.

The nationalities which showed an increase in arrivals were: British, 168 vessels, of 212,744 tons; Belgian, 3 vessels, of 6,067 tons; Russian, 1 vessel, of 1,044 tons;

whilst the following nationalities showed decreases in arrivals: Norwegian, 19 vessels of 15,811 tons; German, 13 vessels, of 535 tons; French, 11 vessels, or 15,141 tons; Italian, 13 vessels, or 7,758 tons; American, 8 vessels, or 5,312 tons; other countries, 1 vessel, or 10,483 tons. (See Table No. 7.)

The countries whence tonnage entered (see Table No. 8) which show marked increases, are, United States (on the Atlantic), 83,679 tons; Brazil, 46,849 tons; Argentine Republic, 30,716 tons; Chili, 25,890 tons; Germany, 16,081 tons; Java, 16,487 tons; Peru, 15,685 tons; Asiatic Turkey, 14,868 tons; Spain, 14,715 tons; Egypt, 11,174 tons, and Italy, 10,559 tons. The countries which show a decrease of entered tonnage are, Algeria, 13,405 tons; European Turkey, 13,858 tons; France, 11,231 tons, and United States (Pacific coast), 3,740 tons.

SHIP-BUILDING.

This branch of the shipping industry of this port showed a decrease, compared with 1886, of one vessel or 4,960 tons. The total number built was 15 vessels of 10,417 tons, five of which were sailing, of 8,050 tons, and 10 steam, of 2,367 tons. This return is exclusive of vessels built for foreigners, of which no official record is published. Table No. 11 shows the classes etc., of the number of vessels built.

LIVERPOOL DOCKS.

The report of the Mersey docks and harbor board for the year ending June 30, 1888, shows that 22,241 vessels, of 9,017,935 tons paid tonnage and harbor rates, exhibiting an increase compared with the previous year of 359 vessels or 220,152 tons. The total amount collected on account of these vessels was \$4,922,199, and is made up as follows: Dock tonnage and harbor rates, \$1,995,632.78; dock rates on goods, \$1,545,063.64; town dues on goods, \$1,171,210.74; graving-dock rates, \$155,989,461; gridiron rates, \$1,538.48; dock rent, \$52,763.90.

POPULATION.

The return of the medical officer of health shows the estimated population of this city to be 592,991, equal to 113.8 per acre, being the most densely populated city in Great Britain. The death rate, 23.6, was the lowest ever recorded, and was 2.6 per 1,000 less than the average for the last ten years (1877 to 1886), and 5.7 less than the average for the previous ten years (1867 to 1876). Of the 14,006 deaths, 7,140 were of males and 6,866 of females. Of the 18,414 births 9,462 were males and 8,952 were females, making the total birth rate of the city equal to 31.1 per 1,000, the average for the previous ten years being 36.5

EMIGRATION.

The number of emigrants that left the port during the year 1887 was 237,999, which number, compared with the previous year, exhibits the marked increase of 46,508. The number that left for the United States was 199,076, being an increase compared with the previous year of 35,769.

The following statement shows the number and nationality of the emigrants, distinguishing their destination:

Number of emigrants of each nationality that left the port of Liverpool during the year 1887.

Destination.	English.	Scotch.	Irish.	Foreign.	Not known.	Total.

WOOL TRADE.

The even course of the wool trade during this year in contrast with 1886 appears uneventful. The last month of the year witnessed a return of confidence, partly in consequence of a rise of other articles of consumption; prior to this the market was weak. The trade in its final issue on the year showed no change of importance. On the whole it has been satisfactory throughout. The following table shows the number and classes of wool that were offered at auction during the series of sales, also those of 1886:

Description.	First series.	Second series.	Third series.	Fourth series.	Fifth series.	Sixth series.	Total, 1887.	Total, 1886.
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
East Indies	15,837	20,129	20,109	19,783	20,265	17,074	113,177	92,653
Turkish Syrian, etc.	4,166	3,919	3,615	4,751	6,414	8,125	30,590	9,207
Egyptian	1,439	1,137	1,257	1,397	1,268	1,173	8,171	6,111
Morocco	2,174	2,243	1,974	2,860	3,236	3,436	15,923	3,577
Portuguese and Spanish	3,455	1,595	2,927	2,308	3,442	2,506	16,233	7,569
River Plate	158	114	105	29			406	2,126
Peru, Lima, and Chili	3,731	4,316	1,470	828	2,576	7,468	20,389	25,145
Sundries	1,698	1,517	1,816	1,986	2,327	2,604	11,943	5,357
Total	32,653	34,070	33,273	33,922	39,528	42,886	217,232	152,075

The first series took place from the 18th to the 28th of January, when 32,653 bales were catalogued, of which 19,900 were sold. The sales opened with a good attendance of English buyers, but there was little demand for export; prices at first suffered a decline of .51 cent to 1.01 cents per lb., but this was fully recovered later on in the case of best Joria and Vicaneer; Egyptian and Portuguese ruled firmly, particularly the latter sorts. The Spanish were all withdrawn.

The second series, from the 15th to the 24th of March, 34,970 bales were catalogued, of which 24,700 were sold. There was a good English and American demand, and prices for the bulk of East India wools ruled on a par with January rates.

The third series was held from the 17th to the 26th of May, 33,273 bales being catalogued, of which 22,000 were sold. The East Indian sales passed off with good spirit, and about 8,000 bales were taken for the United States.

The fourth series was held from the 19th to the 25th of July; 33,922 bales were catalogued, of which 20,800 were sold. The competition was good of tons and American buyers at the East India sales, and prices were on the average about the same as in the May series.

The fifth series, held from the 20th to 23th of September, 39,528 bales being catalogued, of which 21,300 were sold.

There was a large attendance of English buyers at the East India sales but American orders were smaller than usual. At the sixth series, from November 22 to December 2, 42,866 were catalogued, but only 21,900 were sold and only a few American orders were taken.

The following table shows the importation of wools into this port during 1886 and 1887:

JASPER SMITH,
Consul.

PLYMOUTH.

REPORT BY CONSUL FOX.

TRADE AND COMMERCE.

Trade and commerce in this locality during the past nine months has not been very active generally. Wheat has been imported to a fair extent, principally from American ports. The timber trade continues to be large and prosperous. The export trade to United States ports is increasing. Clay and arsenic have been shipped to a considerable value, and tooth brushes manufactured in this country continue to find a good market in the States.

A new feature in the declared exports at this consulate has been two shipments during the past quarter of sheep-skins (salted roans), to the value of \$5,978.20. The shipping trade here has been rather dull, especially in sailing vessels.

SHIPPING.

Several iron foreign-going steam-ships are now owned at this port, but the result of their working has not been hitherto so satisfactory as anticipated. At present, however, with advanced freights, the outlook is brighter. From returns published in a local paper it appears that the tonnage of British and foreign vessels (sailing and steam)

that entered with cargoes and ballast in Plymouth last year (1887) was 202,293 tons against 129,508 tons in 1873, 230,301 tons in 1877, 230,000 tons in 1883, 240,467 tons in 1885, and 186,843 tons in 1886.

HOUSE-BUILDING.

House-building continues to a large extent, from which it would appear that a very general opinion exists that the population of the place will, as hitherto, steadily progress. There are generally from three hundred to four hundred houses in course of construction. Builders, however, have been rather hasty in building, and as a result several have lately failed.

THE HARVEST.

The weather during the past summer was remarkable for rain and want of sunshine, so that some farmers began to doubt whether we should have a harvest at all; but a great change for the better in September has gone far to repair the damage.

Wheat is an average crop, as to quantity, but the condition is somewhat inferior. Barley is a fair crop but condition not very good. Oats below an average, fair as to quality. Potatoes were plentifully grown, but they are very small generally, and far from being of good quality, disease being very prevalent. They were plentiful in quantity, but owing to the heavy rains the quality is very inferior. Carrots and turnips are a failure this year, owing to the incessant rain. Mangold is an average crop. Grass being still very plentiful, farmers will be able to keep their cattle out of doors late in the season, and there being plenty of straw, fodder is not likely to be scarce the ensuing winter. Apples are a short crop, small in size and very deficient in quantity.

STEAM-SHIPS.

Reverting to the shipping trade of this port, I may mention that the largest English steam-ship company's vessels call here to land or embark passengers, mails, and specie. During the past month no fewer than thirty-three of these steam-ships were timed to arrive here on their homeward voyage, without mentioning those (less numerous) which call here on their outward voyage.

DARTMOUTH.

Mr. George Hingston, United States consular agent at Dartmouth, reports as follows: "The trade in iron has been small with the exception of the engineering business carried on by Messrs. Simpson, Strickland & Co., who have been very busy during the greater part of the year, although not quite as much so at the present moment. They have been building a number of steam launches, and one steamer for Turkey, which has been sent to Constantinople. The trade of the other shipbuilders has been small, principally repairing and fitting out yachts. The Cape mail steamers call for mails and passengers fortnightly, the Demerara and West India boats every two or three weeks, and mail steamers for the Falkland Islands and South America every two months. The latter are Hamburg steamers of the Kosmos line.

The harvest this year has been poor, owing to the wretched summer, with the exception of hay, which is abundant, and turnips, which are fair. The imports have been small, consisting of about 1,000 tons of valonia from Smyrna and a little timber from Sweden and Russia."

JERSEY.

Mr. Thomas Renouf, United States consular agent at Jersey, states:

"I have very little to report of any commercial interest during the past nine months. The imports of American products and manufactures are always about the same, the exports of cattle about as formerly. The early potato crop, which forms the principal feature of agriculture, has been very large this season, although toward the close disease manifested itself to a great extent, nevertheless the exports, chiefly to the United Kingdom, yielded a large amount, say about \$1,500,000."

The farmers seem to give all their attention to the growth of the early potato, very little wheat and hay being now cultivated on the island.

GUERNSEY.

Mr. William Carey, United States consular agent at Guernsey, reports:

"I have nothing to report with respect to trade, except that the exportation of breeding animals from this island to the United States seems entirely to have died out."

THOS. W. FOX,
Consul.

UNITED STATES CONSULATE,
Plymouth, October 8, 1888.

SUPPLEMENTARY REPORT BY CONSUL FOX.

Though not very active generally trade and commerce in this locality shows a distinct improvement on the previous year. It is not merely maintaining its position, but there are indications of an advance in the right direction.

The mail-boats during the year have numbered 409, of which 335 were home and 74 outward, as compared with 403 (319 homeward and 84 outward) in the preceding year.

The passengers landed and embarked have been, roughly estimated, between 9,000 and 10,000.

The total tonnage of cargoes coming into the Great Western Docks, Plymouth, was 318,513, an increase of about 6,000 on the preceding year. The cargoes have included the following: Grain, 112,748 tons; coals, 42,908; clay, 19,525; manures, 21,790.

The Cattewater Harbor and Sutton Harbor give the following statistics:

Harbors.	1887.	1888.
Cattewater Harbor:		
Vessels entering	1,363	1,492
Registered tonnage	166,003	174,967
Sutton Harbor:		
Vessels entering	998	1,064
Registered tonnage	102,600	105,775

From various parts of this country there are encouraging reports of general trade progress (with occasional exceptions), notwithstanding that agriculture continues depressed, though there are signs of improvement.

FACTORIES.

Factories and other works not dependent on local support have been in fairly good work, and the reports concerning proposed new ventures would appear to indicate that the field is not yet fully occupied.

TELEPHONE EXCHANGE.

Plymouth Telephone Exchange has developed new energy and enterprise in the past twelve months, and as a natural result, good progress has been made. During 1888, messages to the number of 296,600 have passed through the exchange, and with the reply messages of the subscribers, the number would be 593,200, an average of 2,510 for each subscriber, or less than 1 penny per message. The total number of messages in the previous year was 213,000, an average of 1,060 per subscriber. Since the 1st of January, 1888, fifty-four new subscribers have joined the system, bringing the total number up to 253.

INVOICES AND DECLARED EXPORTS.

Great as was the increase in the number of invoices presented at this consulate during the year 1887, the year 1888 shows a still greater increase, the invoices for that year numbering 124.

The value of declared exports from this district to the United States last quarter amounts to \$74,974.32.

FISHERIES.

The fishery trade of this port continues large. The following particulars, taken from official returns, will show the steady increase in the quantities carried inland from the port of Plymouth by the respective railway companies:

Railways.	1882.	1883.	1884.	1885.	1886.	1887.
	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Great Western	983	870	725	731	1,169	1,854
London and Southwestern	1,807	1,845	1,986	2,817	3,699	3,262
Total	2,790	2,715	2,711	3,598	4,868	5,116

It is hoped that the labors of the gentlemen connected with the marine biological station, recently opened, may some day help to solve important questions connected with this industry, and thus prove the practical benefit which eventually must come from the study of fishes and their foods, etc.

Mr. George Hingston, United States consular agent at Dartmouth, reports:

"The trade of the town has been small with the exception of the engineering works of Messrs. Simpson, Strickland & Co., who do a large business in the building of steam launches and small steamers. Other shipbuilding business has been small, mostly in connection with repairing and fitting out yachts.

There has been somewhat of an improvement of late in the coaling business for supplying steamers with bunker coals.

About 1,600 tons of valonia have arrived here from Smyrna to be conveyed by rail to different places in the neighborhood.

A few cargoes of timber, principally from Russia; also a few small cargoes of apples from French ports and the Channel Islands.

The Cape mail boats call here fortnightly for mails and passengers, as well as the West India, Demerara, and Falkland Islands and South America boats, the latter every eight weeks.

The harvest has been poor with the exception of hay and turnips."

Mr. Thomas Kenouf, United States consular agent at Jersey, reports:

"I beg to confirm my report of 30th September last, having nothing new to add thereto. There are always about the usual quantities of United States products and manufactures imported in this island indirectly via England."

Mr. William Carey, United States consular agent at Guernsey, states:

"I have nothing to report of interest to commerce or trade."

THOS. W. FOX,
Consul.

UNITED STATES CONSULATE,
Plymouth, January 12, 1889.

SCOTLAND.

GALASHIELS.

RICHARD LEES,
Consular Agent.

UNITED STATES CONSULAR AGENCY,
Galashiels, September 29th, 1888.

GLASGOW.

REPORT BY CONSUL UNDERWOOD.

GENERAL TRADE.

Although present indications point to an increase of business for the coming year, the statistics of navigation show that the year just closed has been only moderately prosperous. In the number of arrivals of coastwise sailing vessels there is a falling off of nearly 10 per cent.; of foreign sailing vessels, nearly 17 per cent., and of the tonnage of all sailing vessels, nearly 5 per cent. In the number of arrivals of steam vessels, foreign and coastwise, the increase is about 1 per cent., and of tonnage 8 per cent.

The number of arrivals of steam-vessels from the United States is 199; six more than in the year preceding, with an increase of tonnage of 21,099 tons.

SHIP-BUILDING.

The great improvement at present to be noticed is in ship-building. While it can not be called, in popular phrase, a "boom," it is a very strong movement, reaching nearly every yard, and bringing with it higher prices for ships, for labor, and for materials. The number of vessels launched for the year ending September 30, 1887, was 167; tonnage 173,315; for the year ending September 30, 1888, 214; tonnage 222,897.

The increase during the last nine months is shown by the figures representing the tonnage of vessels launched.

	Tons.		Tons.
January	13,381	June	21,370
February	3,674	July	23,960
March	25,265	August	29,339
April	17,888	September	35,780
May	13,670		

Of the vessels launched in September all were steam-ships, except one sailing ship of 2,400 tons. A year ago (September 30, 1887) there were building 41 steam-vessels with a tonnage of 96,250 tons and 5 sailing-vessels with a tonnage of 9,423 tons. At present there are building 79 steam-vessels with a tonnage of 176,502 tons, and 19 sailing vessels with a tonnage of 29,395 tons.

The large number of new orders comes from the increased demand for freights at better prices, and it is probable that even more vessels would be built except for their increased cost. That operates as a wholesome check, otherwise there might be again an overproduction, and freights would fall to an unremunerative figure. In August last a steamer to carry 4,000 tons freight, with triple expansion engines, could be got for about £27,000; to-day the price would be £33,000. Sailing ships have advanced from £5.15 per ton to £6.10. The rise is due to the increased cost of iron and steel and of wages. Steel angles are now £16 12s. 6d. per ton, steel plates are £7 12s. 6d. and boiler plates £8, an increase of about 30 shillings in two months. Iron plates are now £6, an increase of 10 shillings.

Some firms have already granted an increase of 5 per cent. in wages, and such an advance, or a larger one, is likely to become general.

There is no branch of industry, trade, or commerce so important for Glasgow as that of ship-building, and if the present demand is maintained, the city will enjoy a season of prosperity.

THE IRON TRADE.

The prices of pig-iron warrants during the past year have fluctuated between 44s. 9d. and 37s. 1d. The higher figure was reached nearly a year ago. At the beginning of the present year prices began to fall and continued, with slight reactions, to drop until May, when the lowest point was touched. Then came a gradual stiffening of prices until warrants were quoted in September, at 42s. 10½d.; since which there has been a decline and to-day (October 1) they were quoted at 40s. 7d.

The volume of business is large, and the exports of iron to all countries, except the United States, are much above the average. The revival of ship-building is having a strong influence upon the prices of all descriptions of iron and steel.

The markets of cotton, linen, and woollen fabrics present no special features of interest.

EXPORTS TO THE UNITED STATES.

The total exports from this consular district to the United States amount to \$9,320,713.01, an increase over the preceding year of \$1,457,030.46, about 18.5 per cent.

Increase—		Increase—Continued.	
Cotton goods	\$228,401.81	Union goods (cotton and wool) ...	\$505,486.75
Chemicals	63,896.86	Wool	88,452.82
Coals	17,853.62	Woolen goods	164,622.99
Flax	77,616.48	Decrease—	
Lace curtains and nets	77,346.27	Pig-iron	557,105.30
Linen goods	15,291.21	Old iron rails	306,319.19
Potatoes, seeds and fruit	854,463.14	Muslins	66,802.22
Steel	91.14	Silk goods	15,751.34
Thread	124,458.36		

The decrease in pig-iron is due to increased production in the United States, and the great shipment of potatoes from Scotland was on account of the partial failure of the crop in the United States.

IMPORTS FROM THE UNITED STATES.

In regard to imports from the United States, there have been some marked changes not easily explained. There have been brought over of fresh beef 17,219,024 pounds, which is an increase of 5,333,956 pounds over the year preceding, but less than the figures for 1886 by 10,313,556 pounds. The increase in live cattle is 5,839 head. At 700 pounds each, this amounts to an increase of 4,087,300 pounds. There was also an increase in the following:

Indian corn	bushels..	130,369	Shoe pegs	cwts..	446
Flour	cwts..	111,086	Canned meats	cases..	505
Cheese	do....	8,728	Staves	pieces..	779,834
Lard	do....	2,753	Lumber	do....	57,421
Leather	do....	2,987			

There was the following decrease:

Wheat	bushels..	181,598	Tallow	cwts..	12,006
Oatmeal	cwts..	24,967	Tobacco	do....	29,249
Butter	do....	7,576	Oil-cake	bags..	41,800
Salt pork	do....	1,315	Rosin	cwts..	10,584
Hams	do....	19,860	Apples	barrels..	6,229

THE SUGAR TRADE.

The movement of sugar has taken a turn. The landing certificates issued here for the year ending September 30, 1887, showed that about 110,000 barrels of refined sugar had been imported from the United States.

The following figures (from landing certificates) show the subsequent importations:

	Barrels.		Barrels.
December quarter, 1887	8,533	September quarter, 1888	1,990
March quarter, 1888	11,689		
June quarter, 1888	1,160	Total	23,362

As the price of refined sugar has been put up in the United States the refineries of Greenock are again busy and large shipments are made each week. Sugar to the value of about \$76,000 was included in the item of "provisions" in the accompanying table. Next year it will form an item by itself, if the present movement continues. I give the quantities and value of both raw and refined sugars shipped from here to the United States in the first thirteen days of October, 1888:

Raw sugar 9,692 cwt., valued at £5,296 6s. 3d; refined sugar, 1,698 cwts., valued at £1,213 19s. 3d.

Of treacle or molasses there have been imported for the year ending September 30, 1888, 18,862 hogsheads or casks. The certificates do not always mention the number of gallons.

I give the opinions of a large importer of American produce as to the decrease in certain staples.

WHEAT.

This market is now receiving a supply from India, which from various reasons was not so acceptable before as it is now.

The demand is also smaller on account of the increased importation of flour.

OATMEAL.

The oat crop in Scotland was good last year, and the low price of flour tended to lessen the consumption of oatmeal.

BUTTER.

The decrease is mainly due to the introduction of margarine, which lessens the demand for butter of all grades.

HOG PRODUCTS.

America is consuming more on account of the great increase of population. There has also been a good crop from Ireland and an unprecedentedly large supply from Denmark. Less salt pork is used now at sea than formerly, because steamers are supplanting sailing-vessels, and as they make quick passages they require less salt provisions.

TALLOW.

The decrease is due to the growing manufacture of candles from mineral products.

APPLIES.

Apples fluctuate with the seasons, and last year was not so good as usual.

OIL-CAKE.

The decrease is due to the plenty of other cheap food for cattle, especially of root crops, which were excellent.

CHEESE.

The high price in the United States during the winter and part of the spring put an effective check upon importation; the same was true in a measure with regard to lard. But a reduction in the large stocks in this city of the latter article necessitated a larger supply, hence the increase. The price of cheese later on rose in this market to a point which attracted a supply from America; and accordingly there was on the whole an increase, which is very slight. This was caused by a reduction of the stocks here, not by an increased consumption.

Danish produce in general is coming in largely and is well liked, on account of its freshness, from the short transit.

From a recent circular there is reason to expect another competitor in this market in the shape of New Zealand cheese.

F. H. UNDERWOOD,
Consul.

UNITED STATES CONSULATE,
Glasgow, October 15, 1888.

LEITH.

REPORT BY CONSUL WALLING.

SALTED MEATS.

The direct importations of hog products have been very small, dealers supplying their wants from Glasgow and Liverpool. The consumptive demand has been under an average. The importance of the trade is not what it was a few years ago, and for this there are several causes. Notably the low values which have prevailed of late for home-fed beef and mutton accompanied by an economical retail distribution; and the irregularity in quality of all but one or two brands for which prices asked are so high that it is unremunerative to handle. The imports of dead hogs from Sweden and Denmark, slightly salted, gutted, but head and feet on, have been on a considerable scale, and this new source of supply will probably develop. Importations from the United States might be increased were packers there to pay attention to cut and cure of their meats and consult the taste of the market.

BUTTER.

The butter trade this year, so far as it has yet gone, has been quite exceptional as regards prices, which advanced and declined at times quite unknown before. The production everywhere was large, and prices during the summer were rarely if ever lower; this had the effect of increasing the consumption considerably, to the prejudice of substitutes, such as the finer grades of margarine. Now that the autumn is approaching the impression begins to prevail that the supplies are going to be short, and there is at present a general inclination to lay in stocks for the winter, in the expectation of a rapid advance in price.

The quality of Danish butter has on the whole been satisfactory, although there is a pretty generally expressed opinion that the new process (centrifugal separator) may produce a uniform, but at the same time not a keeping quality. A good deal of Danish butter this summer became blue or moldy in a few weeks. Ireland produced largely this season, and as prices were moderate there was a considerable business done.

American and Canadian creamery and ladle packs have come forward very sparingly, and as the dealers here seem lately to be prejudiced against them, importers have not been tempted to risk large lots after the heavy losses of last year.

CHEESE.

The preference for Canadian cheese as against American has been still more marked this season than in any former year; in fact almost the only American cheese that have come to this market have been western goods, and they are wanted to supply the demand for a cheaper article than is to be found in the arrivals from Canada.

LARD.

In lard the unsatisfactory quality of "prime steam" has so favored the consumption of "refined" that the imports of the former, except for refiners' use, are now on a comparatively small scale.

FLOUR.

The imports of flour to the present time have not been so large as those of the preceding year. The local millers and foreign, chiefly Hungarian, houses have regained much of the ground they seemed to have lost. The late abnormal advance and speculation have put American flours, relatively, 4s. to 6s. per 280 pounds above every other.

THE ARROW STEAM-SHIP COMPANY.

This well-equipped line of steam-vessels continues to develop a good trade between the ports of New York and Leith. During past year there have been upwards of twenty-four arrivals from New York, importing to Leith, in the aggregate, 21,500 tons wheat, 5,400 tons maize, 352,000 sacks flour, 6,000 pails lard, 6,800 tierces lard, 6,300 boxes cheese, 4,000 cases meat, 15,000 bales cotton, 11,800 barrels paraffine scale, 8,000 bags oil-cake, 7,500 barrels oil, 5,800 bags hoofts and horns, 1,850 barrels rosin, also large quantities of sugar, hams, bacon, cork, confections, treacle, raw apples, dried apples, corn meal, oysters, clover-seed, grass-seed, tobacco, tallow, soap, witch-hazel, bark, drugs, medicine, meat-juice, hay, wheels, spokes, hubs, handles, brooms, leather, shoe-pegs, blacking, sewing-machines, lawn-mowers, rakes, scythe-anaths, agricultural implements, forks, harvest binders, pumps, chairs, washboards, clothes-pins, churns, salted hides, logs, box-lumber, clay castings, musical merchandise,

stones, staves, oak moldings, hardware, woodenware, etc. Passenger traffic has satisfactorily advanced, as pressed in my report last year. Freight rates have advanced to a high figure and remain firm.

THE TWEED TRADE.

The woollen industry of the south of Scotland has undergone a gradual improvement during the year. At no time can it be said that manufacturers, as a rule, were busy, there having always been idle looms, but the volume of trade has substantially increased. One factor in this result has undoubtedly been the largely reduced demand for worsteds, a class of goods not made to any great extent in the district, but one which, when fashionable, materially affects the woollen industry of the Scottish border. There has been an increasing demand for what are known as cheviots, that is, goods made from the wool of the breed known as Cheviot sheep. These goods are rough in their texture, are generally loosely woven, and are the most popular for summer and autumn wear. Of late years they have been in demand for ladies' dresses and cloaks, and from their variety of pattern and coloring and the comfort of their wear are certain to retain their hold.

During the year the price of wool rose and has been well maintained, and this firmness had the tendency to strengthen the market generally in sympathy also with the general trade of the country. In an industry so largely dependent upon two such elements as fashion and climate, merchants are slow to order stock suitable only for one season while the weather prospects are uncertain. During the year this consideration has militated greatly against the prosperity of the great border industry, the manufacture of the world-wide known "Scotch tweeds."

The subjoined schedules 1 and 2 show the prices of the leading descriptions of colonial wool at 31st December, 1887, and 22d September, 1888, while No. 3 contains the prices of home wool at the same dates.

Prices current of the leading descriptions of colonial wool, December 31, 1887.

*According to quality.

It may not be uninteresting to have appended what may be regarded as the price of the different varieties of Scotch woolen goods for the ensuing Spring season. They may be stated thus: Cheviots, 3s. 6d. to 6s. per yard; width, 56 inches. Sax-onics (including fine shirtings), 3s. 6d. to 7s. 6d. per yard; width, 56 inches. Worsteds, 5s. to 8s. 6d. per yard; width, 56 inches.

HOSIERY AND UNDERWEAR.

This branch of the woolen industry has been good, and during the year has considerably extended in the district, the principal seat of manufacture being Hawick. The demand for real Scotch-made under-clothing has not been affected by the introduction of Jäger or German hosiery into England, as has been the case in the Leicester district. These German goods have had what may be termed a fictitious reputation, in consequence of the representation that they possess special health-promoting and sanitary properties, owing to their being manufactured exclusively from undyed wools and to their being free from any admixture of cotton.

It is desirable to note in this connection that the white lamb's-wool underwear made in this district for upwards of a century is exclusively composed of pure undyed wool, while in the case of these German goods the presumption is to the contrary as it is authoritatively stated that the whole natural brown wool grown annually throughout the world would be insufficient to produce even five per cent. of them. Assuming that undyed wool underwear possesses all the properties claimed for it by the Germans it must be admitted the whole of the white hosiery goods produced in Scotland have the same merits, as they are certainly undyed. The information would be valuable if the sources of supply of these so-called natural brown wools and the quantities actually manufactured in Germany were ascertained and these statistics contrasted with the amount of Jagers hosiery imported into this country alone.

One element which during this present season has contributed towards improving the hosiery trade in Scotland is the operation of the Merchandise Marks Act of last session which came into operation on August 23, 1887. Hitherto goods have been made in the Nottingham and Leicester districts in imitation of Scotch hosiery and exported to the continent of Europe and to the United States and Canada labelled "Scotch Hosiery." By this act it is constituted an offense punishable on conviction on indictment by imprisonment with or without hard labor for a term not exceeding two years or to a fine or to both imprisonment and fine, and on summary conviction to imprisonment with or without hard labor for a term not exceeding four months or to a fine not exceeding £20, and in the case of a second or subsequent conviction to imprisonment with or without hard labor for a term not exceeding six months or to a fine not exceeding £50; to sell or expose for sale or have in possession for sale or for any purpose of trade or manufacture any goods to which any false "trade description" is applied. In a "trade description" of any goods is included a definition directly or indirectly of the place or country in which said goods were made or produced. The result is that Leicester-made goods must now bear in any description of them as Scotch hosiery and Scotch lamb's-wool hosiery the words, "made in Leicester." This qualification of the character of the hosiery sold as "Scotch" has already had the effect of drawing the attention of buyers to the fact that Leicester is not in Scotland and has already created an increased demand for Scotch hosiery in the place of its origin.

AGRICULTURE.

The spring of 1888 was a most untoward season. Flock-masters incurred heavy expenses in providing food for their sheep, and the death rate amongst lambs was much above the average. The seeding for grain crops was delayed beyond the usual period. A cold, sunless summer followed, and an almost unprecedentedly late harvest is the consequence. Hay was a heavy crop, but considerably spoilt in many districts by rain. Grain crops show bulk above the average, but in outlying high districts are badly matured and ripened, and it is not expected that the yield will be satisfactory. Wheat will be the worst of the cereal crops in Scotland. There will be little really fine quality, as it never got sufficient sunshine and warmth, and the result as regards out-turn is expected to be very poor, being at present estimated to be from 30 per cent. to 40 per cent. short of last year.

Of course if the present advance in prices lasts for any time farmers will get more money for any fair conditioned lots, but this will nothing like compensate them for their short quantity. Barley generally is inferior, but there will be a large quantity of good, useful malting quality, provided it gets safely housed now, and the yield will likely be a full average one. The crop of oats, where it is properly ripened, is a very good one—by far the largest crop of the season. Some very fine lots have already come to market, while a considerable quantity in not very good condition has been thrashed and put on sale. The condition of turnips varies. On dry, warm soils they look well, but they are a very indifferent crop on wet, cold clay. Potatoes are under the average in quantity; and in some places are affected by disease.

Beef and mutton during the last six months have brought higher prices than during the corresponding months of 1887.

A.—Imports at Leith, Scotland, for the year ending June 30, 1888.

I am constrained to reiterate what I said in my annual report last year relative to the items and quantities of imports and exports, as the same conditions exist which tend to make that portion of this report not as satisfactory as I would wish, but I have used every means to have it attain to that degree of perfection which is desirable.

For the purpose of comparison with the annual returns of previous years I have compiled the foregoing returns in precisely similar form, and for same periods as they have been hitherto. Nevertheless the imports and exports shown in Tables A and B do not represent the entire imports and exports of the port of Leith; the variety in each case is much greater, and the aggregate quantities are correspondingly so. The articles and quantities set forth on those forms are copied from an extract thereof, supplied from the office of the Leith harbor and docks commission, and are correct so far as they go; but a complete list or abstract of the kind can not be obtained from that source.

In illustration of the great variety and the large quantities of articles imported into Leith and exported from it, I subjoin copy of a statement issued by the commissioner for the harbor and docks of Leith, for the year ending May 16, 1887 (the latest published), showing the articles on which dues had been paid during the year.

The very unsatisfactory unit of tons in reckoning all the articles in said statement is made necessary from the fact that the only record of imports and exports kept by the Leith harbor and docks commission is estimated in tonnage. I deem it necessary to say, further, that while little idea of the quantity and value of certain articles can be arrived at through their weight, yet the unit of value of many of the articles named is correctly given in tonnage only, and the statement as a whole is adopted as the only available means of conveying the information desired.

The harbor and docks commission should not be confounded with the customs, as the customs duty, or tariff, would not reach any of the items referred to in the statement except tea, coffee, prepared fruit, beer, spirits, and wines.

WILLOUGHBY WALLING,
Consul.

UNITED STATES CONSULATE,
Leith, October 27, 1888.

General imports and exports at Leith in year ending May 16, 1887. (From abstract of the accounts of the port of Leith.)

[NOTE.—The rates charged on goods inward or outward at Leith vary from 1 penny 3 farthings to 1 shilling and 6 pence per ton.]

Flour.—Gibraltar was for many years past in the habit of drawing its supplies of flour chiefly from Marseilles, and partly from the United States. In 1884 and 1885, Marseilles was visited by cholera, and for some time Gibraltar was prevented from importing supplies from that French market. It therefore became absolutely necessary for importers of this important article of food to recur to other quarters for flour, and London was thought of as possibly the nearest and most convenient market. Since then, London has given Gibraltar the greatest portion of its supplies of flour, and equal in quality to the best French flour ^{CO}_S, and at less cost; at least this has been the case up to the present.

It is difficult to account for it. Every effort has been made by the Marseilles people to compete with London, but so far without success. Why London should be able to undersell Marseilles I can not well understand, unless the English millers conduct their business on a more extensive scale, and with greater economy than the French, to enable them to furnish supplies on better terms. Labor must certainly be cheaper in France, and the freight on flour is about the same from Marseilles to Gibraltar as from London to Gibraltar. Neither can the duty lately imposed on foreign wheat landed in France affect the cost of French flour, since a drawback is obtained when the flour produced from it is exported to foreign markets. Can it be that machinery is more perfect and more economically worked in England?

The fact remains that London has now nearly monopolized the Gibraltar flour trade for qualities equivalent to the Marseilles ^{CO}_S, and to-day flour from Marseilles is almost excluded from the market. Algeria has also suspended its usual shipments to it. What arrives here from England is styled English flour, supposed to be the produce of English mills, but I doubt whether it is produced altogether from English wheat—probably American and Indian wheat come in for a large share.

The finest qualities of flour at present here consists chiefly of American, but even in this case there is the remarkable fact that the supplies come from London and not from New York direct to this port. I am informed that London can land flour at Gibraltar at cheaper rates than if imported direct from New York. Low rates of freight from New York to London have probably enabled London shippers to afford paying another freight from London to Gibraltar. It would seem that this double freight has amounted to less money than the single freight from New York to Gibraltar.

Last year was an ordinary year for the sale of flour in this market; there was demand only for the requirements of Gibraltar and the neighborhood of Spain, to a moderate extent. Portugal no longer obtains supplies of flour from Gibraltar. The general opinion at present tends toward a revival in the demands for American flour and foreign cereals in general, as we enter the winter season, as the wants of the neighboring Spanish district are likely then to increase considerably, since recent rains and thunder storms have caused serious damage to the crops in the south of Spain, especially in the provinces of Almeria and Grauada, several of their districts having been inundated through the overflowing of rivers, thereby destroying a large portion of the crops of grain and fruits, besides causing much distress throughout the land.

Refined petroleum.—The difficulty which has been experienced for sometime past, at New York, to ship small parcels of refined petroleum, under 5,000 cases, by any one vessel bound to this port, has so far enabled two of the principal dealers here to almost control this market for the sale of American petroleum, which has induced one of the largest retail grocers here to look elsewhere for his supplies. He has given his attention to Russian petroleum, and has recently imported 1,000 cases direct from Odessa by steam-ship. Another party has also just received on consignment a lot of 500 cases from the same quarter, intended for sale here. It is reported that this parcel comes from the wells of Batoum, said to be chiefly under the control of the Messrs. Rothschild, who are establishing depots wherever the article is salable to any extent.

It is pretended that this Russian petroleum so far meets the wants of consumers in a satisfactory manner, and at a fraction under what American descriptions are selling at present; admitting, however, that the article is not so neatly packed as that which comes from the United States.

Economy in freight and shipping charges, together with the facilities offering to ship even small quantities at any one time direct to this port from the Black Sea, render it probable that these supplies, if repeated, may in the future somewhat interfere with American importations by creating increased competition in the sale of the article here, to the prejudice of our own production. In fact, this Russian petroleum has lately been offered at four pence, British currency, per imperial gallon, deliverable from ships' tanks in this port; but the heavy expenses and rigorous police restrictions attending the handling of the article here have, so far, prevented any operations of this nature being carried out.

Proposed dry-dock.—Viscount Sidmouth, some months ago, made a motion in the Lords relative to the necessity of the nation possessing a dry-dock at Gibraltar, and he pointed out the disastrous results which might arise to the fleets if Great Britain

MALTA.

REPORT BY VICE-CONSUL EYNAUD.

NAVIGATION.

The absence of all quarantine restrictions in or against this island, and the general improvement in shipping throughout 1888, produced a revival in our trade, the arrivals in our harbor and the importation of the articles enumerated in this review showing, with few exceptions, a marked increase over former years.

COAL.

The total importation in 1888 amounted to 589,671 tons, viz : 518,623 tons from South Wales, 47,139 tons from the North Country, 23,159 tons from the Mersey, and 150 tons from Antwerp. The imports of coal for a series of years past were as follows :

	Tons.		Tons.
1887.....	379,968	1882.....	537,439
1886.....	506,322	1881.....	450,955
1885.....	618,796	1880.....	374,036
1884.....	529,204	1879.....	343,803
1883.....	582,975	1878.....	350,043

The arrivals in our harbors in 1888 were as follows : 153 men of war, 4,341 merchant steamers, 1,532 merchant sailing vessels, and 37 steam and sailing yachts, making a total of 6,063, against a total of 4,046 in 1887, 5,079 in 1886, 5,992 in 1885, 5,525 in 1884, 5,974 in 1883, 6,675 in 1882, 5,830 in 1881, 4,962 in 1880, and 5,043 in 1879.

The mercantile steamers arrived in 1888 were as follows :

Flag.	Num-ber.	Tons.	Flag.	Num-ber.	Tons.
British.....	3,702	4,600,000	Rumanian.....	3	270
Italian.....	178	89,398	Dutch.....	2	1,712
French.....	172	175,165	Chinese.....	2	1,412
Norwegian.....	80	75,396	Russian.....	2	1,385
German.....	72	60,419	Spanish.....	1	1,544
Austro-Hungarian.....	42	37,217	Egyptian.....	1	160
Greek.....	38	32,017	Japanese.....	1	105
Ottoman.....	27	31,771			
Belgian.....	19	22,331	Total.....	4,341	5,134,068
Danish.....	4	8,707			

Against a total of 2,857 in 1887, measuring 3,301,987 tons register, of which 2,368 were British; 3,604 in 1886, measuring 4,334,270 tons register, of which 3,023 were British; 4,424 in 1885, measuring 5,150,323 tons register, of which 3,846 were British; 3,853 in 1884, measuring 4,391,548 tons register, of which 3,346 were British; 4,224 in 1883, measuring 4,675,231 tons register, of which 3,675 were British; 4,625 in 1882, measuring 4,821,487 tons register, of which 3,847 were British; and 3,885 in 1881, measuring 3,681,725 tons register, of which 3,175 were British.

Of the 1,532 merchant sailing vessels arrived in 1888, measuring 125,749 tons register, 936 were Italian, measuring 41,345 tons, and 280 Greek, measuring 53,728 tons. In 1887, 1,045 merchant sailing-vessels arrived, measuring 92,887 tons. In 1886, 1,257 merchant sailing-vessels arrived, measuring 106,193 tons; in 1885, 1,380, measuring 125,645 tons; in 1884, 1,528, measuring 132,944 tons; in 1883, 1,579, measuring 152,673 tons; in 1882, 1,789, measuring 116,083 tons; and in 1881, 1,728, measuring 179,072 tons.

Included in the above arrivals in 1888, the following were connected with American trade, viz : Three sailing vessels brought full cargoes, and one a part cargo, of petroleum for this port. One sailing vessel loaded at a port east of Malta, put into Malta on its way to Baltimore. Five steamers from China, Japan, and Java, bound for New York, called here. Four steamers loaded in the United States, called here and proceeded farther east with the same cargoes. Five steamers left Malta in ballast to load in other Mediterranean ports for the United States. The only vessels under the American flag which arrived in 1888 were two steam yachts.

AMERICAN LEAF TOBACCO.

A considerable quantity of cheap cigars is made here, and as they are required to be strong, tobacco of Kentucky and Virginia growth is the most adapted for their use. It should be dark and dark chestnut in color, and not less than two or three years old. We can not take the fine grades of those states either, as the cigars have to be sold very cheap, hence every economy has to be used in manufacturing them; three-fourths fillers and one-fourth binders and wrappers are the proportion, but when leaf is moderate in price, medium to good leafy lugs are the most remunerative to import, and when low class fillers are more abundant and cheap we require a larger proportion of common leaf to medium wrapper.

We had a comparatively large stock at the commencement of 1888, the accumulations of previous receipts which would account for the decrease in the quantity imported last year, as compared to that received in the preceding year. Business in leaf tobacco can not be described as altogether satisfactory, the demand having been slack and prices low throughout 1888. Our supplies in 1888 were principally drawn from England or via England and France. Our stock at present consists largely of fillers and common to good lugs. The following are the particulars of the importations of leaf in 1888, viz:

Whence imported.	Hogsheads.	Cases or bales.	Whence imported.	Hogsheads.	Cases or bales.
From or via England.....	215	218	From Gibraltar.....	3	16
From or via France.....	180	277	From Antwerp.....		101
From or via Italy.....	79	15			
From the United States.....	32	3	Total.....	509	630

All American leaf, against 810 hogsheads, 335 cases and bales in 1887; 1,127 hogsheads, 570 cases and bales in 1886; 602 hogsheads, 579 cases and bales in 1885; 120 hogsheads, 415 cases and bales in 1884; 1,632 hogsheads, 515 cases and bales in 1883; 892 hogsheads, 471 cases and bales in 1882; 788 hogsheads, 338 cases and bales in 1881; 1,076 hogsheads, 195 cases in 1880; 1,433 hogsheads, 111 cases in 1879, and 874 hogsheads, 362 cases in 1878.

AMERICAN MANUFACTURED TOBACCO.

Cavendish, etc., for chewing and smoking, opened in 1888 with a small but fair demand for plug tobacco, but business became very slack at the close, although prices were all in favor of buyers. The importations in 1888 exceeded those of 1887 by 761 cases, but were somewhat below the average. They consisted of 1,572 cases from or via England, 432 cases from the United States, 17 cases from or via Gibraltar; 17 cases from or via Antwerp—making a total of 2,088 cases, against 1,327 in 1887, 2,211 in 1886, 2,740 in 1885, 2,124 in 1884, 1,632 in 1883, 3,175 in 1882, 2,098 in 1881, 2,754 in 1880, 2,477 in 1879, and 2,163 in 1878.

CIGARS.

There were imported 318 cases in 1888; against 331 cases in 1887, 382 cases in 1886, 325 cases in 1885, 449 cases in 1884, 598 in 1883, 842 in 1882, 252 in 1881, 228 in 1880, and 197 in 1879. Only a few cases were received from the East Indies and Havana, the bulk being of German manufacture.

REFINED PETROLEUM.

This market only takes refined in cases. Every description of oil, however, could hitherto be imported here, but the local government now proposes to forbid the importation of such petroleum or other oil as will give off an inflammable vapor at a temperature of less than 76° Fahr. The stock in depot on January 2, 1888, was 19,333 cases; imported in 1888, 118,972; delivered in 1888, 67,922; stock on January 3, 1889, 70,383.

In 1888 the imports consisted of 52,742 cases "Atlantic" and 12,088 cases "Radiant" brands (American) and 54,142 cases from Batoum (Russian).

Although the Russian oil imported here competes successfully with the American in respect to price, it is much inferior to the latter in point of light, cleanliness, and packing. The importations for 1887 to 1882, both years included, were, respectively, in cases: 36,858, 56,685, 64,682, 42,063, 60,923, and 34,490.

ALCOHOL.

The importations in 1888 amounted to 2,660 barrels, butts, and hogsheads (German, Swedish, Austrian, or other Continental distilling), estimated to contain 169,790 gallons, against a total in 1887 of 164,310 gallons, in 1886 of 91,320 gallons, in 1885 of 86,915 gallons, and in 1884 of 82,080 gallons. In 1888 211,940 gallons (old measure), spirits, including liquors, were entered for local consumption and paid duty, while in 1887 the entries were 226,415 gallons.

WHEATEN FLOUR.

Notwithstanding that the duty on wheat and flour continues to afford some protection to millers in the island, the importation of flour in 1888 was somewhat greater than that in the former year. The bulk, as before, was received from the Danube. The importations were:

Description.	1888.	1887.	1886.	1885.
Danube.....bags.....	21,627	23,783	5,380
America.....bags and barrels.....	2,430	3,084	3,354	3,213
France.....do.....	260	373	488	489
Trieste.....do.....	1,089	193	593	177
Algeria.....do.....	249	35	160
Egypt.....do.....	731
Total.....	26,336	27,363	9,850	4,039

In 1888 99,106 quarters hard wheat and 4,467,050 pounds of wheaten flour and macaroni were entered for local consumption and paid duty. In the preceding year the entries were 101,642 quarters hard wheat and 4,374,450 pounds of wheaten flour and macaroni.

LARD.

There was a slight increase in the importations of 1888 as compared to previous years, viz: 2,477 packages, all American, in 1888, as against 2,343 packages in 1887, 1,656 in 1886, 1,138 in 1885, 1,168 in 1884, 760 in 1883, 1,320 in 1882, 1,225 in 1881, and 1,960 in 1880.

HAM AND BACON,

To the amount of 571 packages, principally American, were imported in 1888, against 600 in 1887, 1,029 in 1886, 1,043 in 1885, 1,927 in 1884, 983 in 1883, 1,623 in 1882, 960 in 1881, and 730 in 1880.

CHEESE.

We received 4,346 boxes in 1888, all, with trifling exceptions, American, via England. The receipts in 1887 were 3,786 boxes; in 1886, 4,374 boxes; in 1885, 5,020 boxes; in 1884, 2,852; in 1883, 2,625; in 1882, 4,005; in 1881, 2,961; and in 1880, 2,332.

BUTTER AND BUTTERINE.

There was a slight falling off in the importations in 1888 as compared to those of the last three years, viz: 7,512 firkins and kegs in 1888, against 8,546 in 1887, 10,752 in 1886, 7,662 in 1885, 4,764 in 1884, 4,748 in 1883, 4,035 in 1882, 4,364 in 1881, 2,828 in 1880—all from England, but mostly of American manufacture.

FLORIDA WATER.

In 1888, 6,050 dozen bottles were imported against 5,530 dozen in 1887; 9,518 in 1886; 4,434 in 1885; 4,317 in 1884; 7,925 in 1883, and 6,580 in 1882.

CLEANED RICE.

The prices of wheat having remained comparatively low throughout 1888, the importation of rice was in consequence small—9,686 bags, of two hundred weight each, having been received in 1888, against 16,053 bags in 1887; 15,251 in 1886; 12,446 in 1885; 8,041 in 1884; 12,266 in 1883; 31,500 in 1882; 22,622 in 1881, and 27,914 in 1880. Of the imports last year 4,000 bags of rice were received direct from Burmah, the remainder coming via England.

COFFEE.

There was a considerable increase in the receipts in 1888 over those of the former year, though yet below those of previous years, viz: 4,343 bags, principally Brazilian in 1888 against 1,128 bags in 1887; 5,193 in 1886; 12,619 in 1885; 4,686 in 1884; 9,868 in 1883, and 11,737 in 1882.

CODFISH.

There were 9,844 quintals imported in 1888, of which 1,453 quintals arrived in the latter part of last season, the remainder being this season's fish, nearly all shore dry. The first cargo this season arrived on October 16, and sold well, but the last two cargoes, one of them sea damaged, came on together. The demand this season has been disappointing. Prices are feebly sustained, while the season for consumption of this fish is far advanced. The receipts in 1887 were 6,402 quintals; in 1886, 8,715; in 1885, 4,601; in 1884, 10,702; in 1883, 8,594; in 1882, 4,393; in 1881, 1,200, and in 1880, 1,057.

PICKLED SALMON.

The trade was fairly satisfactory at the finish of last season, 522½ tierces were imported in 1888, principally at the beginning of the year. Business in this article has been restricted this season, dealers being unwilling to pay the prices asked for it. There were 286 tierces imported in 1887; 702 in 1886; 447 in 1885, and 579½ in 1884.

OLIVE-OIL.

Our stock consists of 126,856 gallons. The quantity entered for local consumption in 1888 was 358,953 gallons. I quote clear oil £34 3s. 4d. per ton of 300 American gallons, f. o. b.

LOCAL CONSUMPTION.

The following quantities of articles subject to duty were withdrawn from bond and dues paid for local consumption in 1888:

Articles.	Quantity.	Articles.	Quantity.
Wheat.....bushels..	792,848	Potatoes.....pounds..	14,365,575
